Columbia, SC, 29201-3372

Executive Summary

A Parametric Study was performed for the South Carolina Department of Transportation, Department of Bridges and Structures examining the resulting maximum moments and shears at specific points of interest from a suite of Design (AASHTO HL-93 Design Truck + Lane, HL-93 Design Tandem + Lane, and HL-93 Truck Train + Lane for LRFR, HS-20 for LFR), Legal (AASHTO Legal Loads and specific South Carolina Legal Loads), and Permit Trucks (including South Carolina specific trucks and trucks from adjacent states) crossing the bridges of South Carolina. The purpose of the study was to summarize which trucks need to be used for load rating the South Carolina bridges in order to be compliant with Federal Highway Administration, Department of Transportation (FHWA) 23 CFR 650.307 c (2) and 650.313 c Load Rating.

The final results of the study show that for Legal Loads, the HL-93 Variable Axle Design Truck with the Design Lane Load (using Inventory level Rating Factor of 1.75) controls the Rating Factor for all Legal Trucks (using an average Legal Load Rating Factor of 1.45) for all span lengths and critical force effects for 1-Span bridge arrangements.

For 2-Span bridge arrangements, a specific South Carolina Legal Truck (SC SHV2B) using a Legal Load Rating Factor of 1.45 controls the Rating Factor (over HL-93 Design Truck + Lane using Inventory level Rating Factor of 1.75) for span lengths 15’ and less for both moment and shear. However, the HL-93 Design Tandem + Lane (using an Inventory level Rating Factor of 1.75) control the Rating Factor over the SC SHV2B Legal Truck for span lengths less than 15’ in all 2-Span arrangements.

For 3-Span bridge arrangements, HL-93 Design Truck + Lane or HL-93 Truck Train + Lane design loading with a 1.75 Inventory level Rating Factor controls over all the state and federal legal loads with a 1.45 factor.

Concerning the South Carolina specific School Bus (with a Legal Rating Factor 1.45), the bus controls the Rating Factor (specifically over the SC-SU2 2-Axle Truck) for span lengths 20’-30’ and less and therefore must be included in Legal Load Ratings.

Another result is that the South Carolina Specialized Hauling Vehicles, allowed only on non-Interstate roadways, control the Rating Factor over the AASHTO Specialized Hauling Vehicles. When only comparing the AASHTO SHV Trucks, SU7 controls the Rating Factor, but when the Gross Vehicle Weight (GVW) is divided out, the SU4 controls the actual Rating Tonnage. For non-Interstate System roads, it is recommended the South Carolina Specialized Hauling Vehicles are load rated with only the SU4 and SU7 AASHTO Specialized Hauling Vehicles additionally run. For all Interstate System roads, the SU4, SU5, SU6 and SU7 AASHTO Specialized Hauling Vehicles must be load rated and the South Carolina Specialized Hauling Vehicles can be omitted since they are precluded from traveling on Interstates.

Final results for Rating Tons of Single Unit Trucks (comparing Legal Trucks with the Gross Vehicle Weight of the trucks divided out) show that for spans less than 20’-30’, the South Carolina School Bus (2-Axle Truck) controls and for spans greater than 20’-30’ the SC-SU2 (2-Axle Truck) controls. For 3-Axle Trucks, a South Carolina Specific Legal Truck (SC SHV1A (65k)) controls almost all bridge arrangements, span lengths, and critical force effects, except for a couple of isolated locations where AAHSTO’s SC-Type 3 Truck controls. For 4-or-More Axle Trucks, a South Carolina Specific Legal Truck (SC SHV2A (66k)) controls almost all bridge arrangements, span lengths, and critical force effects, except for a couple of isolated locations where AAHSTO’s SU4 Truck controls. For Combination Unit Trucks of 5 or More Axles, South Carolina Specific Legal Trucks (SC SHV3A (85k) and SC SHV3B (90k)), as well as modified AASHTO SC-Type 3S2 Truck, control.

For Permit Loads the study shows that for short simple span bridges less than 35’, the South Carolina Permit Cranes (with a 1.3 Permit Rating Factor) do not control over the remaining standard 100k, 120k and 130k Permit Trucks (with a 1.3 Permit Rating Factor) being analyzed. However, for all 2- and 3-span bridges, the Permit Cranes control for every span length and every critical force effect. In addition, the 177.7k Permit Crane controls over the smaller 160k Permit Crane for all span lengths greater than 35’. For Permit Loads, controlling Rating Factors for all span arrangements, span lengths, and critical force effects, can be obtained by rating the 177.7k Crane, SC-120k, and SC-130k Permit Trucks. However, it is recommended that all 5 Permit Trucks from the study be run as SCDOT finalizes their permitting procedures and methods because vehicles of certain weight may have different permitting allowances such as yearly, monthly or daily permits.

Additionally, for design purposes, the study results show that the HL-93 Design Loading Trucks and Lanes control the Rating Factor over all standard 100k, 120k and 130k permit trucks for all span arrangements and span lengths. However, there are instances when the special permit cranes actually control over the HL-93 Design Loadings as noted below.
The HL-93 Design Loading Trucks and Lanes control the Rating Factor over all Permit Trucks except for the 177.7k Crane at Span Lengths of 70’-150’ for 1-Span arrangements.
The HL-93 Design Loadings (Trucks and Lanes) control the Rating Factor over all Permit Trucks except for the 177.7k Permit Crane at 65’-120’ Span Lengths (for Shear points of interest), 177.7k Permit Crane at 80’-140’ Span Lengths (for Moment at .4L of Span 1) and both Permit Cranes at 30’-45’ Span Lengths (for Max Moment at Interior Bent) for 2-Span arrangements.
For 3-Span arrangements, the HL-93 Design Loadings (Trucks and Lanes) control the Rating Factor over all Permit Trucks except for the 177.7k and 160k Permit Crane at 55’-110’ Span Lengths (for Shear points of interest), 177.7k Permit Crane at 70’-140’ Span Lengths (for Moment at .4L of End Spans and 0.5L of Center Span) and both Permit Cranes at 25-45’ Span Lengths (for Max Moment at Interior Bent). .

This report contains details on the background and scope of the project, the methodology used, data analysis, and corresponding conclusions and recommendations.

Definitions

AASHTO Design Loads – Vehicles/loads specified by AASHTO to be used for the initial design of a structure.

AASHTO Legal Loads – Vehicles/loads provided by AASHTO for load rating bridges for routine legal commercial traffic (including Type 3, 3S2, and 3-3, and Specialized Hauling Vehicles SU4 to SU7 as defined in AASHTO MBE).

Legal Loads – The National Bridge Inspection Standards (NBIS) define Legal Loads as the maximum Legal Load for each vehicle configuration permitted by law for the state in which the bridge is located.

Posting Vehicles – Vehicles developed to represent legal loads and used as vehicle models for load rating and bridge posting.

Routine Permit Loads (Permit Vehicles) – The NBIS defines routine Permit Loads as a live load, which has a gross weight, axle weight or distance between axles not conforming to the State statutes for legally configured vehicles, authorized for unlimited trips over an extended period of time to move alongside other heavy vehicles on a regular basis. The Permit Vehicles within this study are developed to represent Permit Loads and are used in the permitting process to evaluate bridges for overweight vehicles.

Study Vehicles – Live loads, identified from various sources, used in this expanded parametric study.

Table of Contents

1 Introduction / Project Scope

In 2018, HDR Engineering, Inc. (HDR) performed a Parametric Study for the South Carolina Department of Transportation (SCDOT) to ensure SCDOT's compliance with Federal Highway Administration, Department of Transportation (FHWA) 23 CFR 650.307 c (2) and 650.313 c Load Rating and FHWA 23 CFR 650.313 (g) Quality Control and Quality Assurance. FHWA 23 CFR 650.307 c (2) states that 'each state transportation department must include a bridge inspection organization that is responsible for bridge inspections, reports, load ratings, and other requirements of these standards'.

In order to ensure compliance with the load rating portion of these requirements, HDR performed a Parametric Study (study) to determine maximum moments and shears at specific points of interest for six specialized hauling vehicles, South Carolina Representative School Bus, annual Permit Loads, AASHTO Legal Vehicles (with an additional 2-Axle Truck and adjustments to axle weights for Type 3 and Type 3S2 Trucks to encompass South Carolina State Statutes), and SCDOT Special Permit Loads (evaluated super and mega loads for common configurations along with Permit Trucks from adjacent states) all compared to the LRFR HL-93 Design Truck + Lane, HL-93 Design Tandem + Lane, and HL-93 Truck Train + Lane. Based on the results of the Parametric Study, HDR has developed a list of recommended rating vehicles. In addition, for reference, graphs comparing unfactored maximum moments and shears (with no impact included) of Legal and Permit Trucks to the HS-20 Design Truck (LFR) are included in the Appendix for future rating of any South Carolina bridges using LFR.

2 Analysis Procedures

The following sections summarize the project approach and procedures used to evaluate the live load analysis with respect to Legal and Permit Study Vehicles compared to the LRFR HL-93 Design Truck + Lane, HL-93 Design Tandem + Lane, and HL-93 Truck Train + Lane (and LFR HS-20 Design Truck).

2.1 Live Loads

Live loads were identified from various sources for this study. These sources include AASHTO, South Carolina Statutes and Permit Trucks from adjacent states to South Carolina. See Appendix B for figures showing the axle weights and spacing of the vehicles used in the Parametric Study.

In order to encapsulate maximum loading scenarios, various truck configurations were included in the Parametric Study. The study included LRFR HL-93 Design Loading Vehicles (HL-93 Design Truck + Lane, HL-93 Design Tandem + Lane, and HL-93 Truck Train + Lane - for in-depth rating comparison), LFR HS-20 Design Truck (simple live load comparison), AASHTO and South Carolina Legal Loads and Permit Loads developed for this study using State Statutes and previously permitted truck databases provided by the SCDOT. See the table in Appendix B for final trucks chosen for the Parametric Study.

Design Loadings used for evaluation and comparison in the study are the following:

- HL-93 Design Truck with Design Lane (.64 kips/ft.) – LRFR
- HL-93 Design Tandem with Design Lane (.64 kips/ft.) – LRFR
- HL-93 Truck Train (90%) with 90% Design Lane (.576 kips/ft.) – LRFR
- HS-20 Design Truck - LFR

Only the Design Loading Vehicles (HL-93 Design Truck + Lane, HL-93 Design Tandem + Lane, and HL-93 Truck Train + Lane) for LRFR are used for an in depth comparison (for determining trucks to be rated and posted) because the purpose of the study is to see how the chosen Legal Loads (specifically South Carolina Specialized Hauling Vehicles and Permits) compare to the HL-93 Design Loading Vehicles. In order to simplify the comparison (since live load and impact factors must be applied) LRFR's HL-93 Design Loading Vehicles and Lanes are chosen for this study due to the fact that LFR's impact factors vary with span length and load factors vary from operating to inventory ratings, while LRFR's impact factor is constant and the load factors for Legal and Permit Vehicles are the same for inventory and operating ratings (according to the most recent *Manual for Bridge Evaluation*). However, in Appendix C, graphs comparing the unfactored moments and shears of all Legal and Permit Trucks are compared to LFR HS-20 Design Truck for reference in rating any bridges designed using LFD.

The Design Trucks HS-15, and HS-25 were not included for comparison in the study because they are straight ratios from and have the same axle spacing as the HS-20 Design Truck (which is used for the LFR comparison).

Legal Trucks used for evaluation in the study included the following (note that 'SC' stands for specific South Carolina Legal Trucks):

- AASHTO Type 3 (modified to encompass SC State Statute Requirements)
- AASHTO Type 3S2 (modified to encompass SC State Statute Requirements)
- AASHTO Type 3-3
- 2-0.75 AASHTO Type 3-3 + .2klf Lane
- SC SHV1A (65k)
- SC SHV1B (70k)
- SC SHV2A (66k)
- SC SHV2B (80k)
- SC SHV3A (85k)
- SC SHV3B (90k)
- SC School Bus
- SC-SU2 (40k)
- SHV-SU4 (Specialized Hauling Vehicle)
- SHV-SU5 (Specialized Hauling Vehicle)
- SHV-SU6 (Specialized Hauling Vehicle)
- SHV-SU7 (Specialized Hauling Vehicle)

Note that AASHTO's EV2 (Emergency Vehicle – 57.5k) and EV3 (Emergency Vehicle – 86k) Trucks are not included within the study because they must always be run in rating analysis. Therefore, including EV2 and EV3 Trucks in the study is unnecessary.

The SC SHV Legal Trucks are developed from the South Carolina Code of Laws Section 56-5-4140[1]. Within this section of the South Carolina Legislature, subsection 'e', a weight limit is given: 'Combination of vehicles with five or more axles 73,280 lbs'. This weight limit does not include the 15% tolerance (also mentioned in the Code of Laws). Other vehicles are allowed up to 80,000 lbs. if they meet the FHWA

[1] South Carolina Legislature, *South Carolina Code of Laws,* Title 56 Chapter 5 (accessed September 7th,2018); available from https://www.scstatehouse.gov/code/t56c005.php

wheel spacing formula. The 73,280 lbs. limit is for wheel spacings that do not meet Federal Bridge Weight Formula B and is a special State Statute for South Carolina. The SC SHV Legal Trucks within this study envelope the State Statutes that allow for heavier axles and closer wheel spacings than what FHWA would allow on Interstate routes. SC SHV1A/SHV1B Trucks envelope the Well Drilling Truck in SC Code of Laws 56-5-4140 (C-(3)) limited to 70k Gross Vehicle Weight with 25k max axle weight. SC SHV2A Truck envelopes the Concrete Mixing Truck in SC Code of Laws 56-5-4140 (C-(2)) limited to 66k Gross Vehicle Weight with at least three axles. SC SHV2B Truck is developed to encompass the allowed tolerance within the code on non-Interstate highways. For combination vehicles SC SHV3A/SHV3B the code states (in 56-5-4140 (A-(g))) that a max of 73,280 lbs. with an additional 15% tolerance is allowed on non-Interstate highways. SC SHV3A encompasses this weight and tolerance, while SC SHV3B is developed to encompass AASHTO's SU trucks' 17k axle weight plus a tolerance of 15%. South Carolina Code of Law states in Section 56-5-4140 that these South Carolina specific Legal Trucks are only allowed on non-Interstates: 'Enforcement tolerance is fifteen percent for a vehicle or trailer transporting sod only on non-Interstate routes.'

Within the Parametric Study, the South Carolina Specialized Hauling Vehicles and AASHTO Specialized Hauling Vehicles were compared, and the controlling trucks were determined.

The South Carolina Legal School Bus consisting of a front axle weight of 12.05k and a back axle weight of 23k (with a spacing of 20'-10") is included in the study to encompass the max weights and spacing of two types of buses (Types C and D). See Table 2-1 below for the South Carolina Department of Education's School Bus Requirements (School Bus Routing) with type and associated gross weight. After the study was completed, it was determined that the SC-SU2 Truck controls over this School Bus for span lengths over approximately 30', so both the SC-SU2 Truck and School Bus are included in the template to encompass maximum loading scenarios.

Table 2-1: School Bus Requirements[2]

Bus Type	Capacity (Number of Passengers)	Gross Weight (Pounds)
C	16 or 36	21,700
C	19	21,000
C	54	21,700
C	60	24,500
C	66	25,500
D	35	31,350
D	78	35,050

See Tables 2-2 and 2-3 below showing the South Carolina Legal Truck type or axle spacing with associated max load from SC Title 56 Chapter 5 (used for research to ensure that truck configurations used in the study representing South Carolina's trucks are conservative).

[2] South Carolina Department of Education, *School Bus Routing*, pg. 18 (accessed September 7th, 2018) available from https://ed.sc.gov/districts-schools/district-schools-files/south-carolina-school-bus-routing-manual/
2007 South Carolina School Bus Specifications, (accessed September 7th, 2018) available from https://ed.sc.gov/scdoe/assets/File/districts-schools/transportation/maintenance/SC_School_Bus_Specifications_2007.pdf

Table 2-2: (Legal Loads on SC Highways in SC State Statutes)[3]

(a)	Single-unit vehicle with two axles	35,000 lbs.
(b)	Single-unit vehicle with three axles	46,000 lbs.
(c)	Single-unit vehicle with four axles	63,500 lbs.
(d)	Single-unit vehicle with five or more axles	65,000 lbs.
(e)	Combination of vehicles with three axle	50,000 lbs.
(f)	Combination of vehicles with four axles	65,000 lbs.
(g)	Combination of vehicles with five or more axles	73,280 lbs.

For (a) in Table 2-2 above, SC-SU2 Truck covers this weight requirement. Type 3 Truck covers the weight requirement for (b) in Table 2-2. Table 2-2 (c) is covered by SC SHV2A Truck, and (d) is covered by AASHTO's SU6 Truck (69,500 lbs). Table 2-3 below shows the grandfathered weight allowances for SC Legal Trucks according to State Statutes (SC Code of Law Title 56 Chapter 5 Section 4140). Note that for two axles, a tandem back axle weight of 35.2k is allowed. To encompass this grandfathered state allowance and still meet AASHTO's Gross Vehicle Weight requirement, AASHTO's Type 3 and Type 3S2 axle weights are modified (see Appendix B).

Table 2-3 (Cont. on Pg. 5): (SC Legal Trucks State Statute Requirements)[4]

Distance between the extremes of any group of 2 or more consecutive axles (ft.)	**Maximum load in pounds carried on any group of 2 or more consecutive axles**					
	2 axles	3 axles	4 axles	5 axles	6 axles	7 axles
4	35,200					
5	35,200					
6	35,200					
7	35,200					
8 and less	35,200	35,200				
more than 8	38,000	42,000				
9	39,000	42,500				
10	40,000	43,500				
11		44,000				
12		45,000	50,000			
13		45,500	50,500			
14		46,500	51,500			
15		47,500	52,000

51			76,000	80,000		
52			76,500			
53			77,500			
54			78,000			
55			78,500			
56			79,500			
57			80,000			

Permit Trucks: South Carolina's standard Permitting Vehicles included in the load rating analysis encompass most of the possible truck loading scenarios. Statutes of SC Permit Vehicles as well as the database history for trucks permitted within the state were researched and the common configurations were chosen and used in the study.

The following Permit Trucks were used in the study:

- SC-100k Permit (5 axles)
- SC-120k Permit (6 axles)
- SC-130k Permit (7 axles)
- SC Crane #544726 (160k)
- SC Crane #527568 (177.7k)

The 5, 6, and 7 axle "general" Permit Trucks not only encompass the maximum allowable sizes and weights granted by permit (Section E of 'Guidelines for Movement Over South Carolina Highways of Oversize and Overweight (OSOW) Vehicles and Loads') and South Carolina Code of Law, but also encompass the regulations of Permit Trucks found in Georgia and North Carolina. In South Carolina the weight limit for 5 axles is 90k, for 6 axles is 110k, and for 7 axles is 130k (per State Statutes 56-5-4010 through 56-4-4230 and 57-3-130 through 57-3-190). Information gathered from the State Statutes was taken (including tolerances) and was compiled to develop these guidelines for oversize and overweight vehicles and loads. The 100k and 120k Permit Trucks are conservative for South Carolina and also allow safety for across the border travel from Georgia and North Carolina. Standard Permit Trucks for the study follow standards of a typical annual Georgia oversize truck permit, the Oversize/Overweight Permit Handbook of North Carolina, a typical South Carolina oversize/overweight truck multiple-trip permit, and oversize/overweight permits for typical South Carolina Cranes (see Appendix A for the documents supporting these Permit Trucks).

See Table 2-4 below for the summary of the requirements from the SC State Statutes for all Permit Trucks. Trucks over 80k GVW will require permits except those trucks that are allowed on "non-Interstates" by State Statutes. Those off system "legal" trucks (SC SHV) will be used to post non-Interstate bridges. Any other trucks used (Permit or those over 80k GVW used on Interstates) will require permits. The study "Permit" Trucks envelope SC State Statutes and neighboring state permit vehicles.

Table 2-4: Limits for all SC Vehicles (State Statutes)[5]

Truck Type	**Max Load – Gross Weight (lbs)**
Two Axle Single Unit	40,000
Three Axle Single Unit	50,000
Four or More Axle Single Unit	65,000
Combination of Vehicles with Three Axles	55,000
Combination of Vehicles with Four Axles	70,000
Combination of Vehicles with Five Axles	90,000
Combination of Vehicles with Six Axles	110,000
Combination of Vehicles with Seven Axles	130,000
Gross Tandem Axles	
Single Axles	20,000
Tandem Axle	40,000
Tridem or Quad Axle	60,000

[5] 'Guidelines for Movement Over South Carolina Highways of Oversize and Overweight (OSOW) Vehicles and Loads' : Statue Authority – SC Code of Law Section 56-5-4010 through 56-5-4230 and 57-3-130 through 57-3-190 (Full Document in Appendix C)

2.2 Structure Types

The structures investigated were assumed to be typical bridges with uniform stiffness and with girder spacings and span lengths within the range of application for the distribution factors of the AASHTO Standard Specifications for Highway Bridges (LFD) and AASHTO LRFD Bridge Design Specifications (LRFD). The analysis utilized base span lengths, 'ℓ' shown in Figures 2-1 through 2-3, ranging from 10 feet to 200 feet (increments of 5 feet from 10 to 70 feet and increments of 10 feet from 70 to 200 feet).

Simple span (Figure 2-1), two-span continuous (Figure 2-2), and three span continuous structures (Figure 2-3) were considered. For the two-span continuous structures, the span arrangement of equal span lengths was used ('ℓ-ℓ'). For the three-span continuous structures, the span arrangement of 'ℓ-1.3ℓ-ℓ' (ℓ=length of Spans 1 and 3) was used.

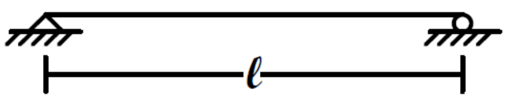

Figure 2-1: Simple Span Structures

Figure 2-2: Two-Span Structure with Equal Spans

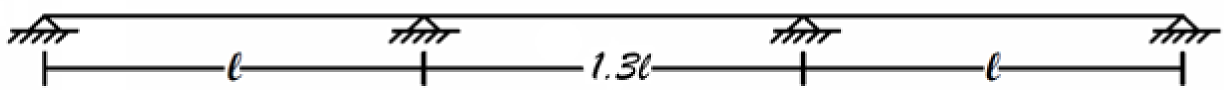

Figure 2-3: Three-Span Structure

2.3 Force Effects

Influence line ordinates were determined for each of the force effects listed below for the different span configurations described in the preceding section. The analysis assumed a prismatic cross-section for the entire structure length. Influence line ordinates obtained at 20th points were found to provide sufficient accuracy for this analysis.
The critical live load force effects (moments and shears) of interest were:

- For simple span structures:
  - Positive moment at midspan
  - Positive end shear
- For two-span continuous structures:
  - Positive moment at 0.4L of first span
  - Negative moment at interior support
  - Positive end shear
  - Negative shear left of interior support
  - Positive shear right of interior support

- For three-span continuous structures:
    - Positive moment at 0.4L of first span
    - Positive moment at 0.5L in center span
    - Negative moment at interior support
    - Positive end shear
    - Negative shear left of interior support
    - Positive shear right of interior support

2.4 Load Factors and Impact

Impact was included in the evaluation of the study vehicles in comparison to LRFR's HL-93 Design Loadings. In order to compare across categories (compare Legal Trucks and Permit Trucks to HL-93 Design Loadings) impact factors affect the results and must be included in the study. For LRFR evaluations and comparisons, an impact factor of 33% and the appropriate load factors were applied to all trucks (Permit, Legal, and Design), but not the lanes according to AASHTO LRFD Code.
A load factor of 1.75 is applied to the HL-93 Design Loadings according to Table 6A.4.2.2-1 'Limit States and Load Factors for Load Rating' in *AASHTO Manual for Bridge Evaluation 2016* (See Figure 2-4 below).

Table 6A.4.2.2-1—Limit States and Load Factors for Load Rating

Bridge Type	Limit State*	Dead Load γ_{DC}	Dead Load γ_{DW}	Design Load Inventory γ_{LL}	Design Load Operating γ_{LL}	Legal Load γ_{LL}	Permit Load γ_{LL}

Figure 2-4: Design Load Factors

A load factor of 1.3 (average of load factors) is applied to all Permit Trucks (encompassing the range of load factors due to different criteria) according to 2013 revision of Table 6A.4.5.2a-1 'Permit Load Factors' in *AASHTO Manual for Bridge Evaluation* (See Figure 2-5 below).

Table 6A.4.5.4.2a-1—Permit Load Factors: γ_L

Permit Type	Frequency	Loading Condition	DF[a]	*ADTT* (one direction)	Load Factor by Permit Weight Ratio[b]: GVW / AL < 2.0 (kip/ft)	2.0 < GVW/AL < 3.0 (kip/ft)	GVW/AL > 3.0 (kip/ft)
Routine or Annual	Unlimited Crossings	Mix with traffic (other vehicles may be on the bridge)	Two or more lanes	>5000	1.40	1.35	1.30
				=1000	1.35	1.25	1.20
				<100	1.30	1.20	1.15
					All Weights		
Special or Limited Crossing	Single-Trip	Escorted with no other vehicles on the bridge	One lane	N/A	1.10		
	Single-Trip	Mix with traffic (other vehicles may be on the bridge)	One lane	All ADTTs	1.20		
	Multiple-Trips (less than 100 crossings	Mix with traffic (other vehicles may be on the bridge)	One lane	All ADTTs	1.40		

Figure 2-5: Permit Load Factors

A load factor of 1.45 is applied to all Legal Trucks according to the 2013 revision of Table 6A.4.4.2.3a-1 'Generalized Live Load Factors for Routine Commercial Traffic' in *AASHTO Manual for Bridge Evaluation* (See Figure 2-6 below).

Table 6A.4.4.2.3a-1—Generalized Live Load Factors, γ_L for Routine Commercial Traffic

Traffic Volume (one direction)	Load Factor ~~for Type 3, Type 3S2, Type 3-3, and Lane Loads~~
Unknown	~~1.80~~ 1.45
$ADTT \geq 5{,}000$	~~1.80~~ 1.45
$ADTT \leq 1{,}000$	~~1.65~~ 1.30
~~$ADTT \leq 100$~~	~~1.40~~

Figure 2-6: Legal Load Factors

For the LFR comparison (Legal and Permit Trucks to HS-20 Design Truck), no impact or load factors were applied due to this comparison being for reference only (unfactored moments and shears).

2.5 Method of Evaluation

The critical force effects for all structure types and base span lengths were calculated for all study vehicles. LARSA, a structural analysis software, was used to create models for each span arrangement (1-span, 2-span, 3-span). Each of the trucks chosen were applied to a prismatic section as part of a single lane moving load analysis. Maximum shear and moment results were enveloped and exported from LARSA into Excel and then evaluated at the predetermined specific points of interest. As a part of the post-processing of the LARSA data, the maximum moment and shear values at the points of interest were sub-divided into the four categories of trucks (Legal – SU's vs. HL-93 Design Loadings, AASHTO Legal Trucks vs. HL-93 Design Loadings, SC Specific Legal Trucks vs. HL-93 Design Loadings, Permit vs. HL-93 Design Loadings). Once divided into these categories, the moments and shears were normalized to HL-93 Design Truck + Lane (1.0) by dividing the force effect of the Legal Trucks, Permit Trucks, HL-93 Design Tandem + Lane, and HL-93 Truck Train + Lane force effect by the corresponding HL-93 Design Truck + Lane's force effect. The normalized moments and shears (compared to the HL-93 Design Truck + Lane) for each category were then graphed for each point of interest for Rating Factors.

For a Rating Ton comparison, only Legal Trucks were divided by their individual Gross Vehicle Weight and the resulting moments and shears were then graphed for each point..

3 Results and Recommendations

3.1 Methodology

The following recommendations are based on the observations made from studying the results of the Parametric Study. As discussed, the study divided the trucks into two groups to evaluate separately: Legal Trucks and Permit Trucks compared to the LRFR HL-93 Design Loadings. In addition, the Rating Tons of all Legal Trucks were compared to each other by dividing out the Gross Vehicle Weight of each individual truck. One-, two- and three-span arrangements were analyzed for a suite of span lengths up to 200' for one-span, 200'-200' for two-span and 200'-260'-200' for three-span. There are 2 critical force effects of interest for the one-span (simple) bridges, 5 for the two-span (continuous) bridges, and 6 for the three-span (continuous) bridges that were investigated. These were at locations of maximum positive and negative live load shear and moment.

The graphs from which conclusions were drawn (for Rating Factor results) and referenced in this section plot the maximum live load shear or moment at the critical locations for each truck for the different span lengths normalized to the HL-93 Design Truck + Lane. The normalized shear or moment simply means that the shear and moment results of each truck are divided by the corresponding shear and moment result of the HL-93 Design Truck + Lane. This results in having the moment or shear of the HL-93 Design Truck + Lane being equal to 1.0, with the values assigned to the other trucks as a ratio of the HL-93 Design Truck + Lane.

The graphs from which conclusions were drawn (for Rating Ton results for Legal Trucks) and referenced in this section plot the maximum live load shear or moment divided by the Gross Vehicle Weight of the truck being graphed at the critical locations for each truck for the different span lengths. The span lengths are plotted on the X-Axis, and the live load shears and moments are plotted on the Y-Axis. Note that for 2-Span Graphs the 'x' Axis is labeled 'Max Span Length' indicating 'ℓ' in 'ℓ-ℓ' (see Figure 2-2) and for 3-Span Graphs 'x' Axis is labeled 'Min Span Length' indicating 'ℓ' in 'ℓ-1.3ℓ-ℓ' (see Figure 2-3).

The series represent each individual Legal or Permit Rating Truck (and HL-93 Design Loadings for comparison for the Rating Factor graphs). Since the Legal and Permit Trucks are graphed separately and there are 3 different span arrangements and 13 critical force effects of interest, and since the presentation of graphs is further subdivided by range of span lengths, this produces 221 unique graphs (and an additional 52 unique graphs for the HS-20 LFR Design Truck comparison) where the controlling trucks can be observed. These are all located in Appendix C, while only "representative" graphs are shown in the body of the report to summarize the results of all the plots which show similar conclusions.

For rating of Design Loads, HDR recommends following the standards and processes of the *Manual for Bridge Evaluation (MBE)*. HS-20 Design Live Loading (Design Truck and Lane Loading) must be used for rating according to the *MBE* 6B.6.2 (the max of Design Truck or Lane Loading). The extreme live load force effect to be used in the basic rating equation 6B.4.1-1 (*MBE*) should be determined using the HS-20 Truck or Lane Loading as defined in the AASHTO Standard Specifications and shown in the *MBE* Figures 6B.6.2-1 and 6B.6.2-2.

3.2 Legal Loads

The various families of Legal Loads were analyzed and compared within the graphs in the following figures. These families of Legal Loads include the AASHTO Legal Loads ('modified' SC-Type 3, 'modified' SC-Type 3S2, and Type 3-3), 2-0.75 AASHTO Type 3-3 + .2klf Lane, the AASHTO Specialized Hauling Vehicles (SU4, SU5, SU6 & SU7) and the SCDOT Specialized Hauling Vehicles (SC SHV Types 1A, 1B, 2A, 2B, 3A & 3B, and SC-SU2). The SCDOT Specialized Hauling Vehicles cannot legally run on the Interstate.

Figure 3-1 shows the normalized end shear for simple span lengths up to 200' for the South Carolina Legal Trucks vs. HL-93 Design Truck + Lane, HL-93 Design Tandem + Lane, and HL-93 Truck Train + Lane. One observation from this figure is that the HL-93 Design Truck + Lane controls (this is consistent for 1-Span arrangements, all span lengths, and critical force effects for rating factors). Another observation from this figure is that the SC SHV1B, 2B, and 3B Legal Trucks control for all Legal Trucks (this is consistent for all span arrangements, span lengths, and critical force effects for rating factors). Figure 3-2 shows the normalized end shear for simple span lengths up to 200' for AAHSTO's SHV-SU Trucks vs. HL-93 Design Tandem + Lane, and HL-93 Truck Train + Lane. From this graph it can be concluded that the SHV-SU7 Truck always controls (this is consistent for all span arrangements, span lengths, and critical force effects) for Rating Factors. Another result found through analyzing the graphs in Figures 3-1 and 3-2 is that the South Carolina Specialized Hauling Vehicles control over the AASHTO Specialized Hauling Vehicles for Rating Factors (due to the normalized ratios in Figure 3-1 being greater than those in Figure 3-2).

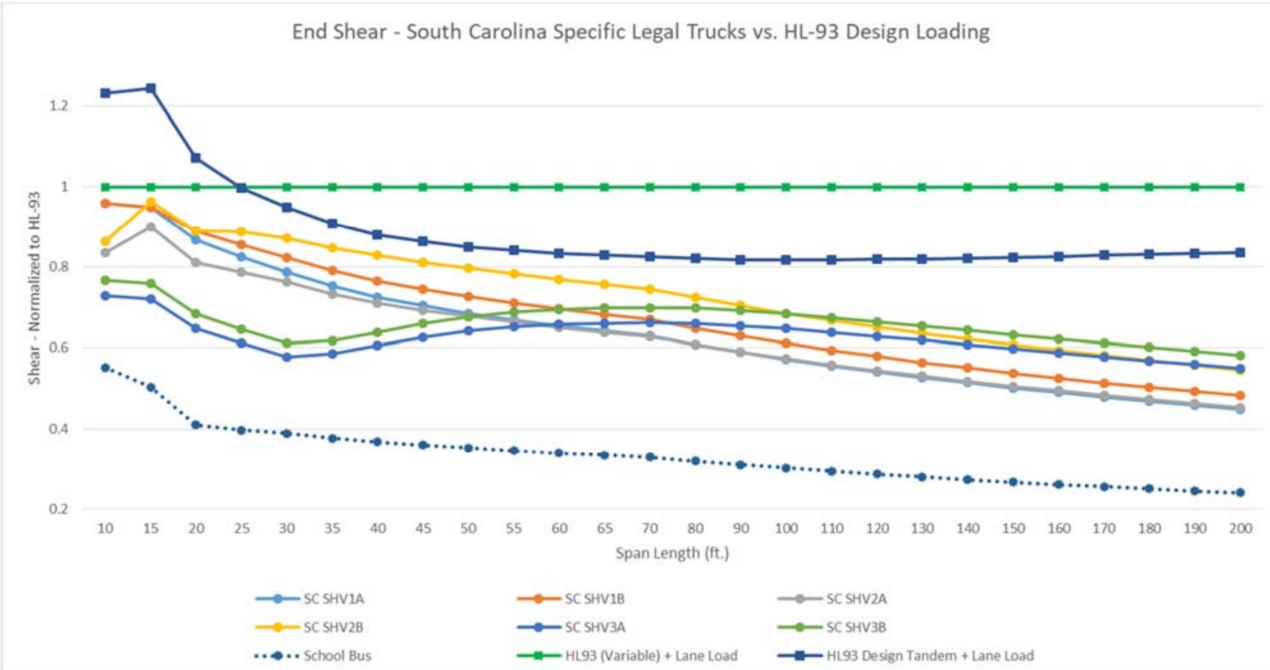

Figure 3-1: 1-Span Arrangements - HL-93 Design Loading Vehicles control Legal Trucks Rating Factor

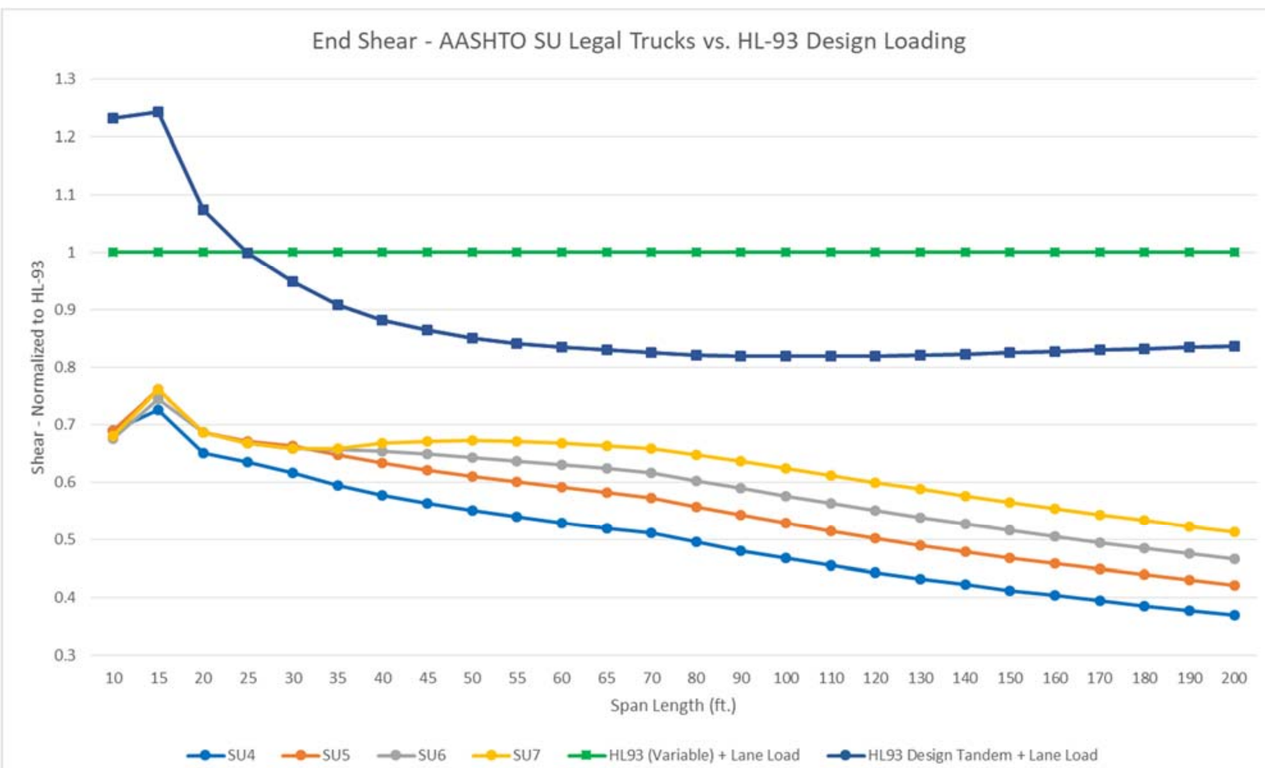

Figure 3-2: 1-Span Arrangements - SHV-SU7 controls Legal Trucks Rating Factor of AASHTO SHV Trucks (HL-93 Design Loading Vehicles control overall Rating Factor)

Graphs in Figures 3-3, 3-4 and 3-5 below show, for 2-span and 3-span arrangements, the HL-93 Design Loadings (Truck + Lane, Design Tandem + Lane and Truck Train + Lane) controlling over South Carolina Specialized Hauling Vehicles and AAHSTO Legal Trucks. Results from these graphs show that in order to encapsulate the maximum moments and shears resulting from Legal Trucks SC SHV 1B, 2B, 3B and AASHTO's 2-0.75 Type 3-3 + Lane for Rating Factors for all 2-and 3-span bridges, HL-93 Design Tandem + Lane must be rated in addition to the HL-93 Design Truck + Lane. Another result from Figures 3-3 and 3-4 is that South Carolina School Bus controls the Rating Factor (specifically over the SC-SU2, 2-Axle Truck) for span lengths 20'-30' and less (this is consistent for all span arrangements, span lengths, and critical force effects for rating factors).

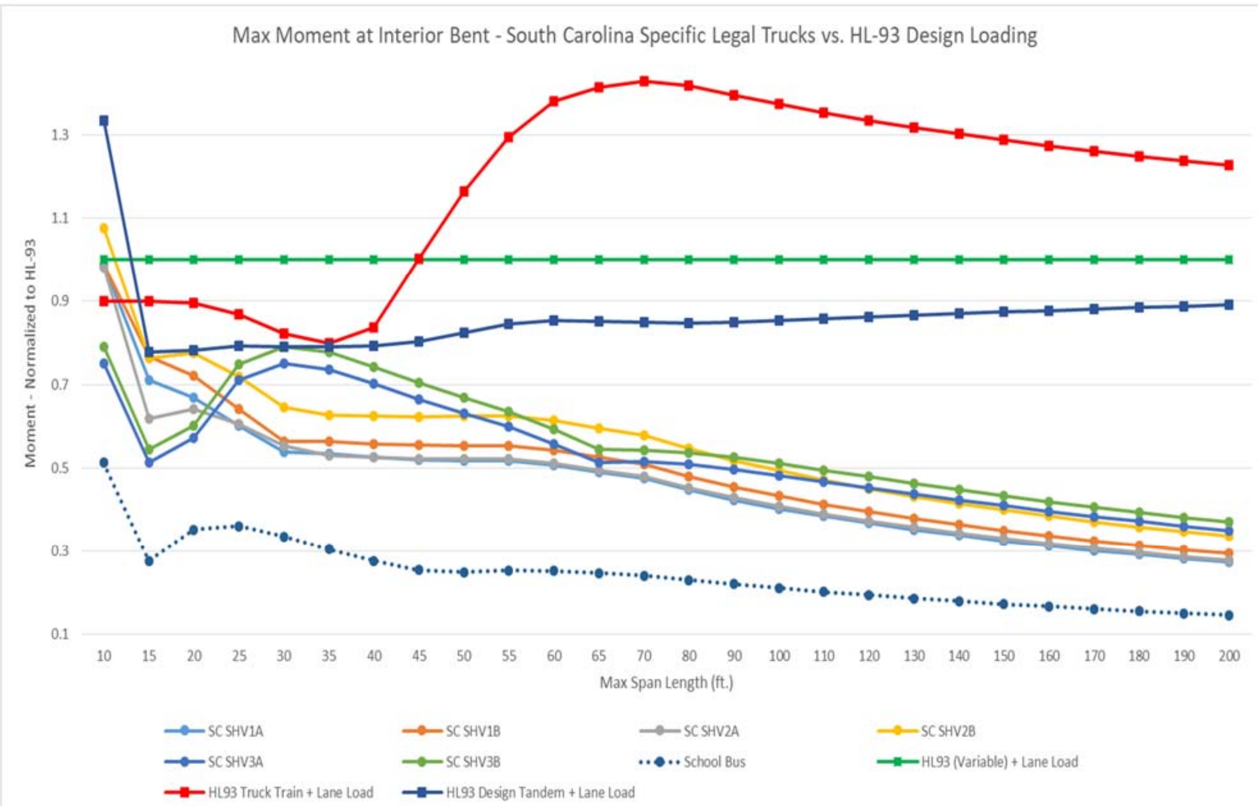

Figure 3-3: 2-Span Arrangements – HL-93 Design Loadings control South Carolina Legal Trucks Rating Factor

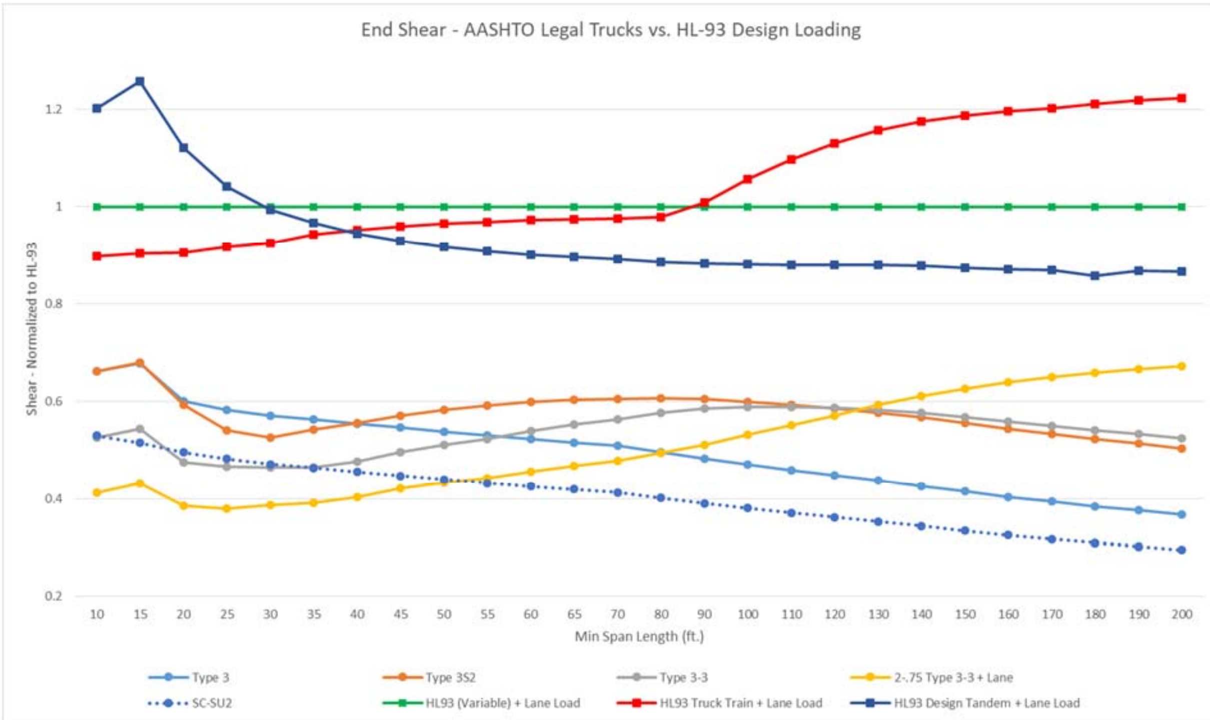

Figure 3-4: 3-Span Arrangements – HL-93 Design Loadings control AASHTO Legal Trucks Rating Factor

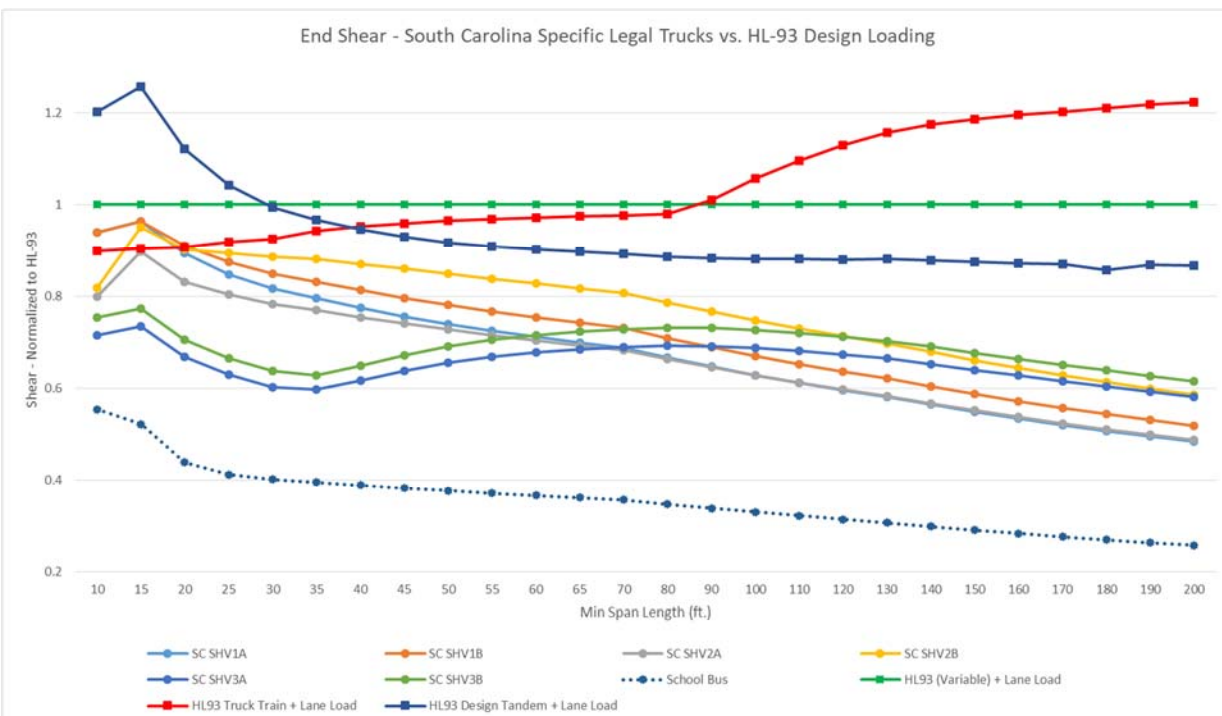

Figure 3-5: 3-Span Arrangements – HL-93 Design Loadings control South Carolina Legal Trucks Rating Factor

In conclusion, based on the results of the Parametric Study, HDR recommends load rating non-Interstate bridges using the standard Design Vehicles as described by the *MBE* (use the appropriate loading based on LRFR or LFR) as well as the following Legal Trucks:

- AASHTO SC-Type 3
- AASHTO SC-Type 3S2
- AASHTO Type 3-3
- SCDOT Specialized Hauling Vehicles
- SC School Bus
- SC-SU2 (controls for spans greater than approximately 30')
- 2-0.75 AASHTO Type 3-3 + .2klf Lane
- SHV-SU4
- SHV-SU7

For Interstate bridges, the suite of vehicles that should be rated includes the standard design vehicles as described by the *MBE* (use the appropriate loading based on LRFR or LFR) as well as the following Legal Trucks:

- AASHTO SC-Type 3
- AASHTO SC-Type 3S2
- AASHTO Type 3-3
- AASHTO Specialized Hauling Vehicles (SU4, SU5, SU6, SU7)
- SC School Bus
- SC-SU2 (controls for spans greater than approximately 30')
- 2-0.75 AASHTO Type 3-3 + .2klf Lane

The SCDOT Specialized Hauling Vehicles can be omitted from Interstate bridge ratings since they are precluded from traveling on Interstates (according to South Carolina Code of Laws Title 56 Chapter 5 Section 4140). For Rating Tonnage (or load effect per unit weight of vehicle), Table 3-1 is HDR's recommendation (based on the results of this study) for posting vehicles.

<u>Table 3-1: Suite of Proposed Posting Vehicles</u>

		Proposed Vehicles (Total Required = 14)
Single Unit	2 Axles	SC – SU2 School Bus
	3 Axles	SC SHV1A (65k) – Non-Interstate Only SC – Type 3 (AASHTO)
	4 or More Axles	SC SHV2A (66k) – Non-Interstate Only SU4 SU5 SU6 SU7
Combination Unit	5 or More Axles	SC SHV3A (85k) – Non-Interstate Only SC SHV3B (90k) – Non-Interstate Only SC – Type 3S2 (AASHTO) Type 3-3 (AASHTO)
	Dual Trucks	2-0.75 AASHTO Type 3-3 + .2klf Lane

These posting vehicle recommendations come from conclusions based on the following "example" graphs. Figure 3-4 above shows Dual Truck (2-0.75 AASHTO Type 3-3 + .2klf Lane) controlling the Rating Factor for longer span lengths as well as other legal load comparison graphs in Appendix C and must therefore be included among the Posting Vehicles in Table 3-1. See Appendix C for the entire set of graphs from which these conclusions are based. For determining what vehicle to use for the 2-axle trucks, Figure 3-6 shows the South Carolina School Bus controlling up to slightly over 30' span lengths. Figure 3-7 shows a typical location of SC-SU2 Legal Truck controlling for all span arrangements, span lengths over 30', and all critical force effects. Other typical results shown in Figure 3-7 are SC SHV1A (65k) controlling for 3-Axle Trucks and SC SHV2A (66k) controlling for 4-or-More Axle Trucks. Figures 3-7(a), 3-7(b), and 3-7(c) separate out the Legal Trucks in Figure 3-7 by number of axles in order to more clearly see the controlling truck (for 2, 3, and 4-or-More axles).

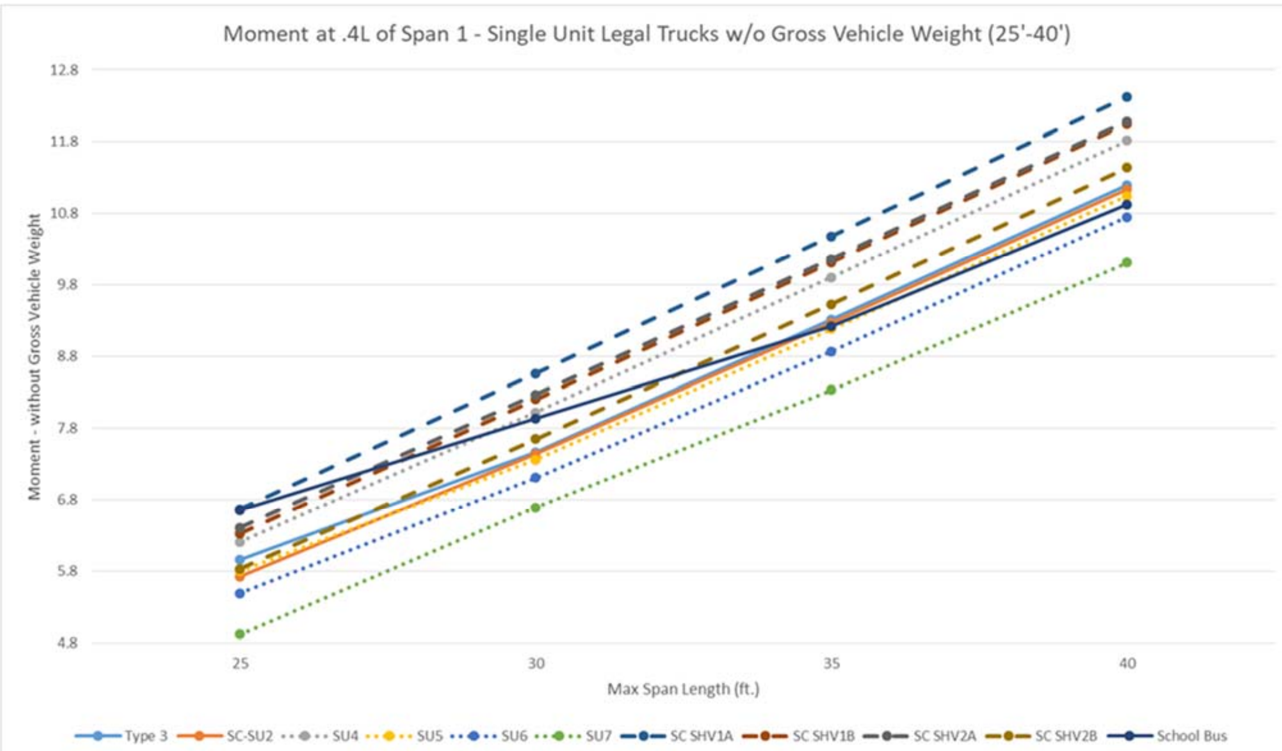

Figure 3-6: 2-Span Arrangement – South Carolina School Bus controlling over SC-SU2 up to 30'

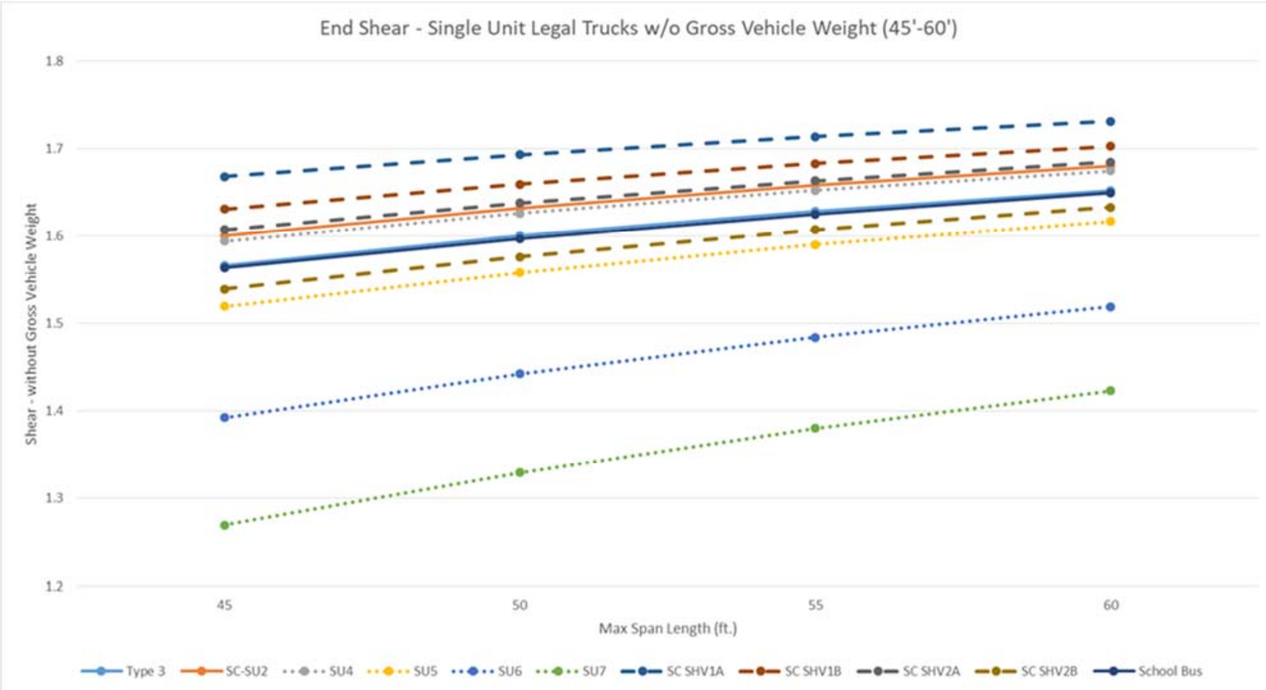

Figure 3-7: 2-Span Arrangement – SC-SU2 Legal Truck controlling for 2-Axle Trucks; SC SHV1A controlling for 3-Axle Trucks; SC SHV2A (66k) controlling 4-or-More Axle Trucks

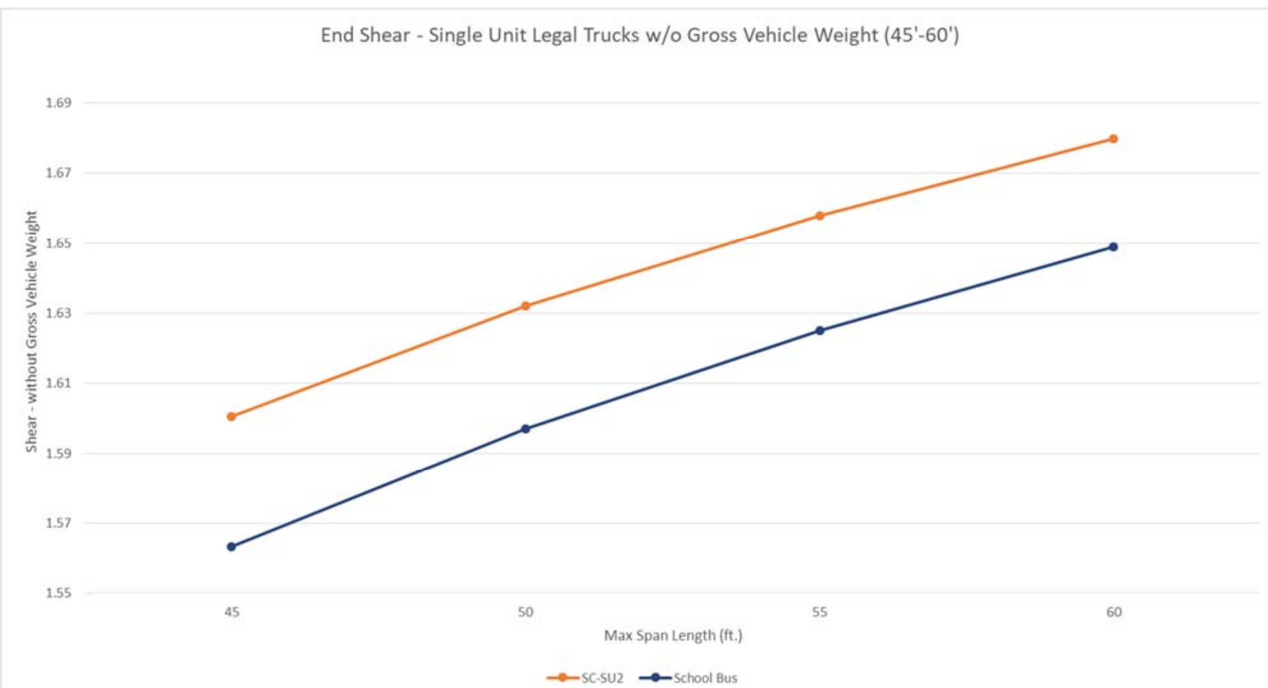

Figure 3-7(a): 2-Span Arrangement – SC-SU2 Legal Truck controlling for 2-Axle Trucks

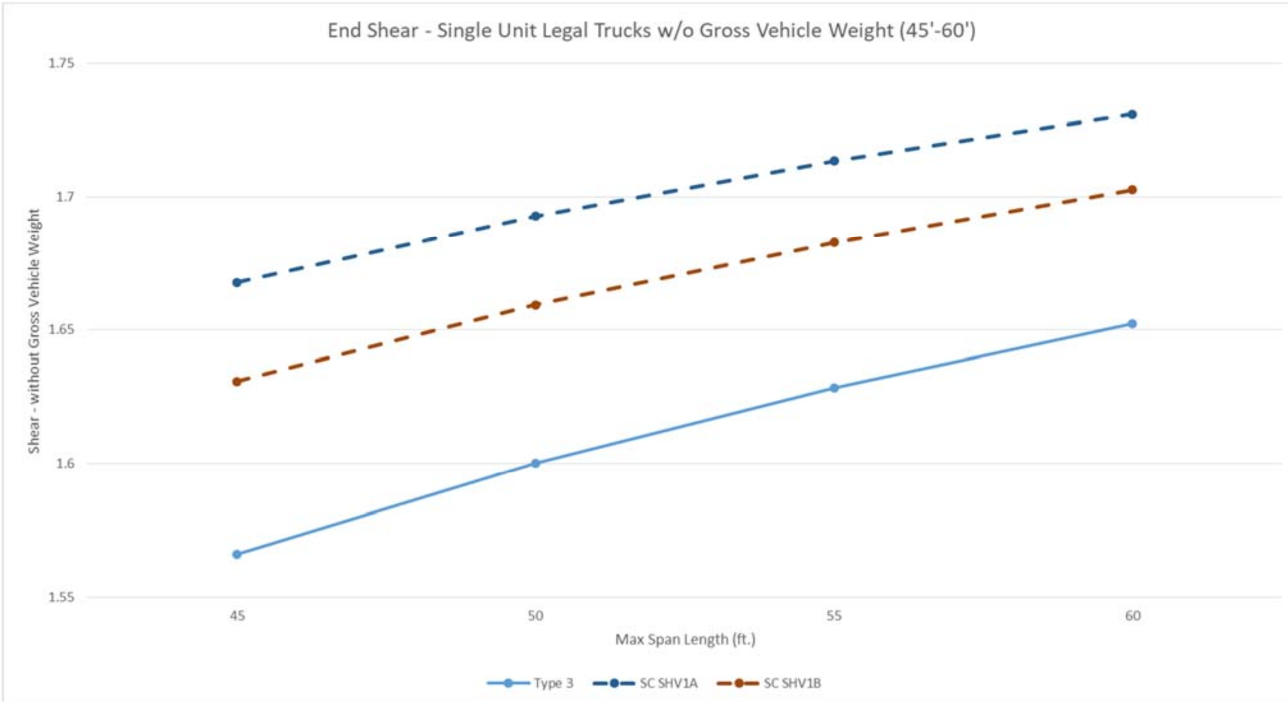

Figure 3-7(b): 2-Span Arrangement – SC SHV1A controlling for 3-Axle Trucks

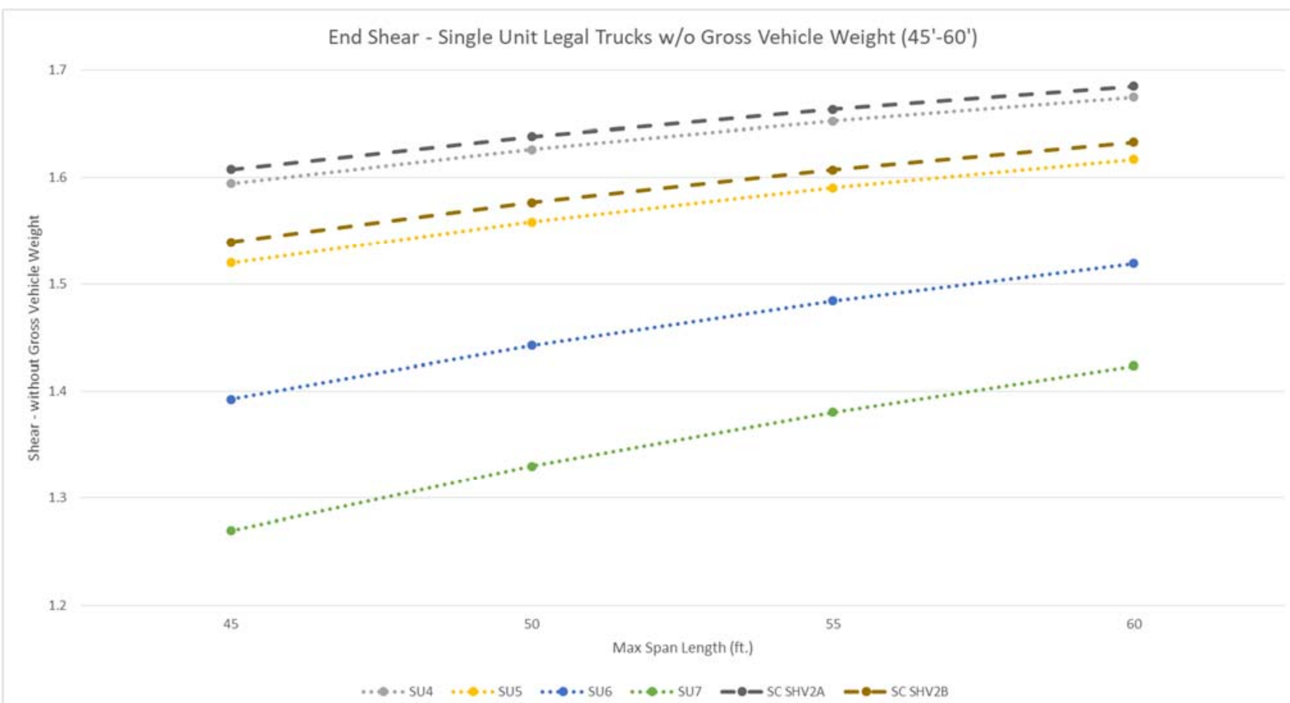

Figure 3-7(c): 2-Span Arrangement – SC SHV2A controlling for 4-or-More Axle Trucks

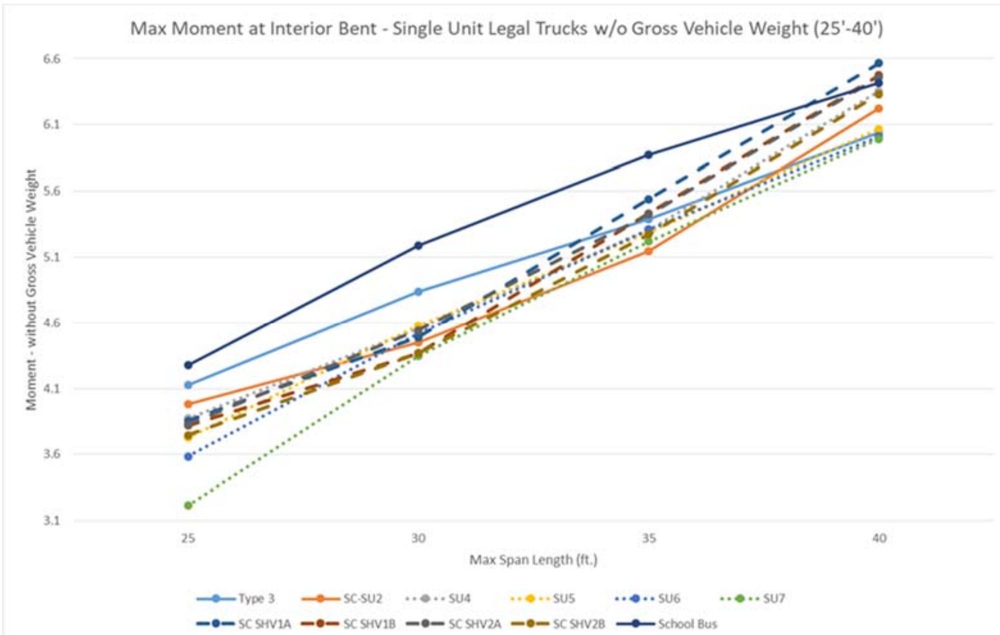
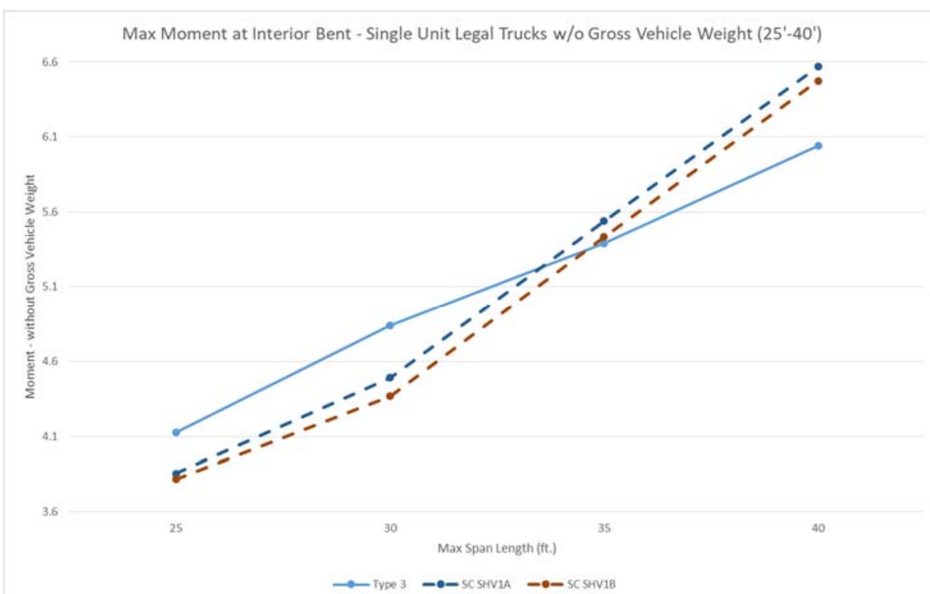
SU4, SU7 and Type 3 Legal Trucks are included in the suite of posting vehicles for 3- and 4-or-More Axle Trucks because they control at isolated locations for either Rating Factor or Rating Tonnage. See a representative example of these results in Figures 3-8, 3-8(a) (3-Axle Trucks only), 3-9, and 3-9(a) (4-or-More Axle Trucks only) below.



<u>Figure 3-8: 2-Span Arrangement – SC-Type 3 (AASHTO) Legal Truck controlling for 3-Axle Trucks (up to approximately 33' max span length)</u>



<u>Figure 3-8(a): 2-Span Arrangement – SC-Type 3 (AASHTO) Legal Truck controlling 3-Axle Trucks (up to approximately 33' max span length)</u>

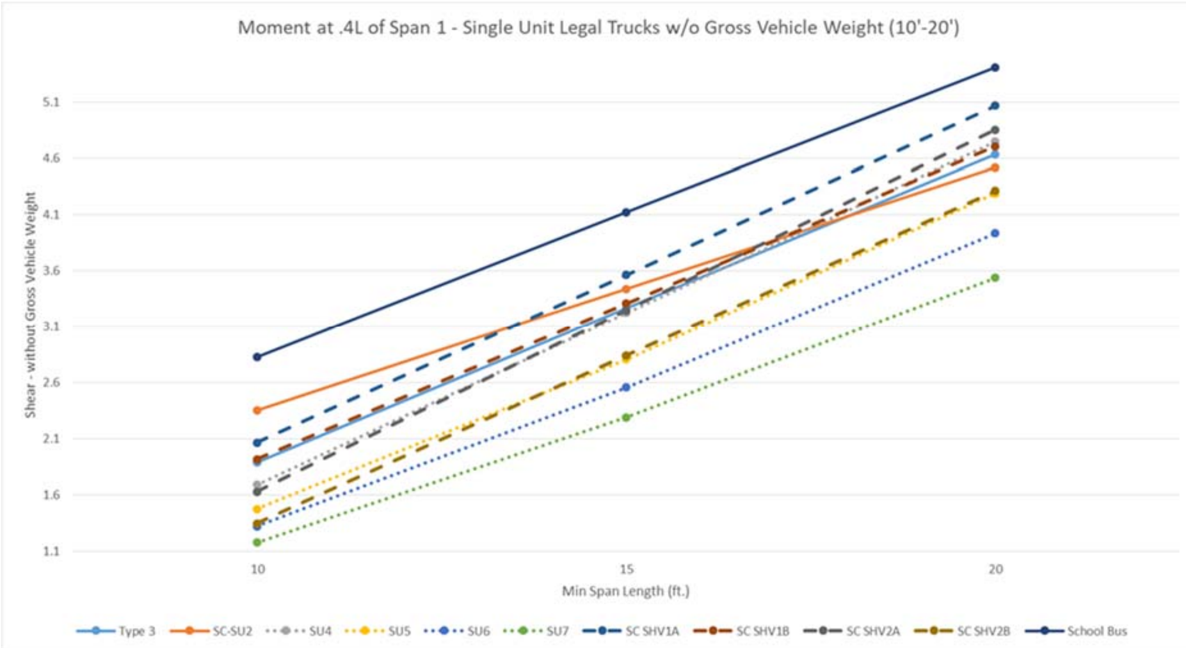


Figure 3-9: 3-Span Arrangement - SU4 Legal Truck controlling for 4-or-More Axle Trucks
SU4 controls over all of AASHTO's SU Trucks

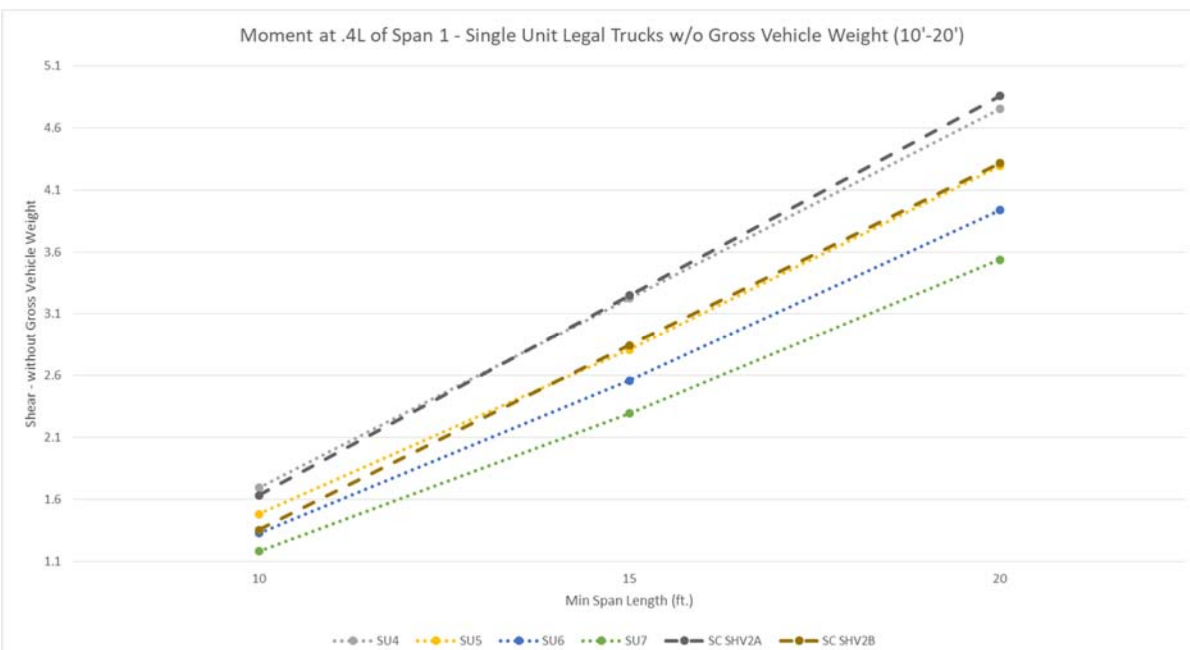

Figure 3-9(a): 3-Span Arrangement – SU4 Legal Truck controlling for 4-or-More Axle Trucks
(up to approximately 15' max span length)

For 5-or-More Axle Combination Trucks, Figures 3-10 and 3-11 show a representative example of the recommended posting vehicles controlling (typical within span arrangements, span lengths, and critical force effects). Other graphs can be found in Appendix C.

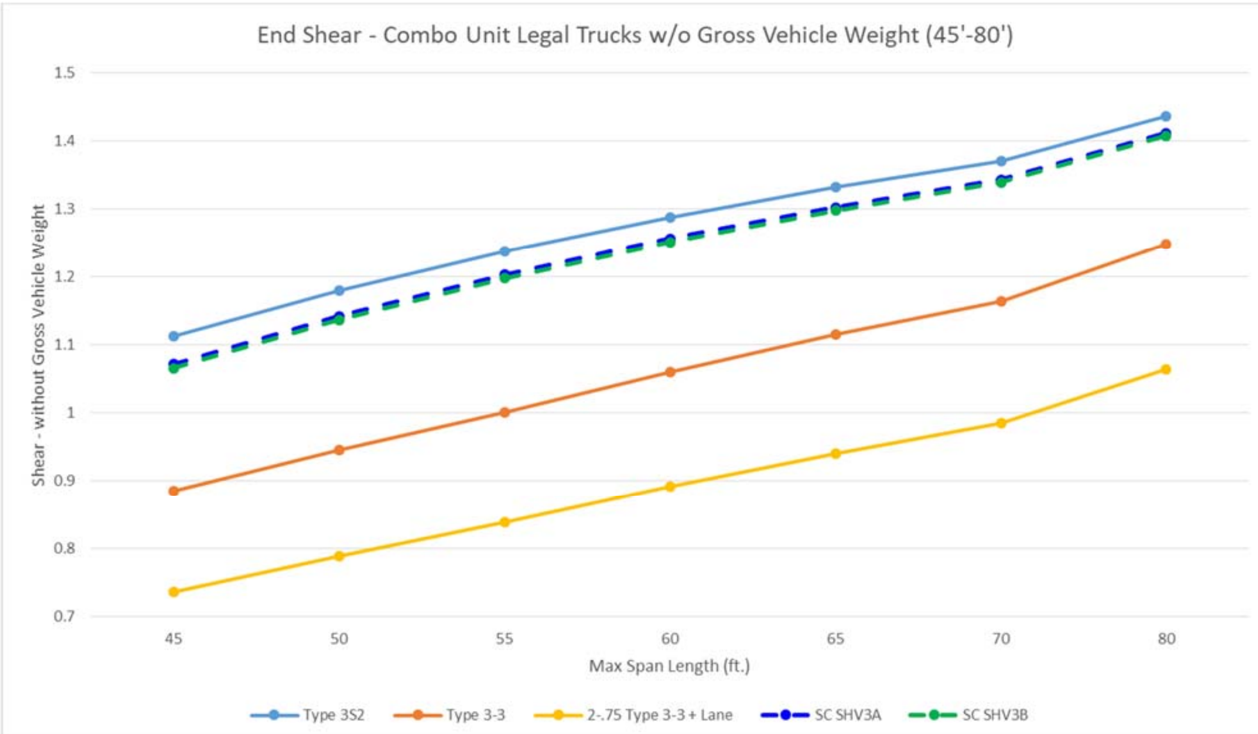

Figure 3-10: 2-Span Arrangement - SC-Type 3S2 (AASHTO) controlling for 5-or-More Axle Trucks (Combination Trucks)

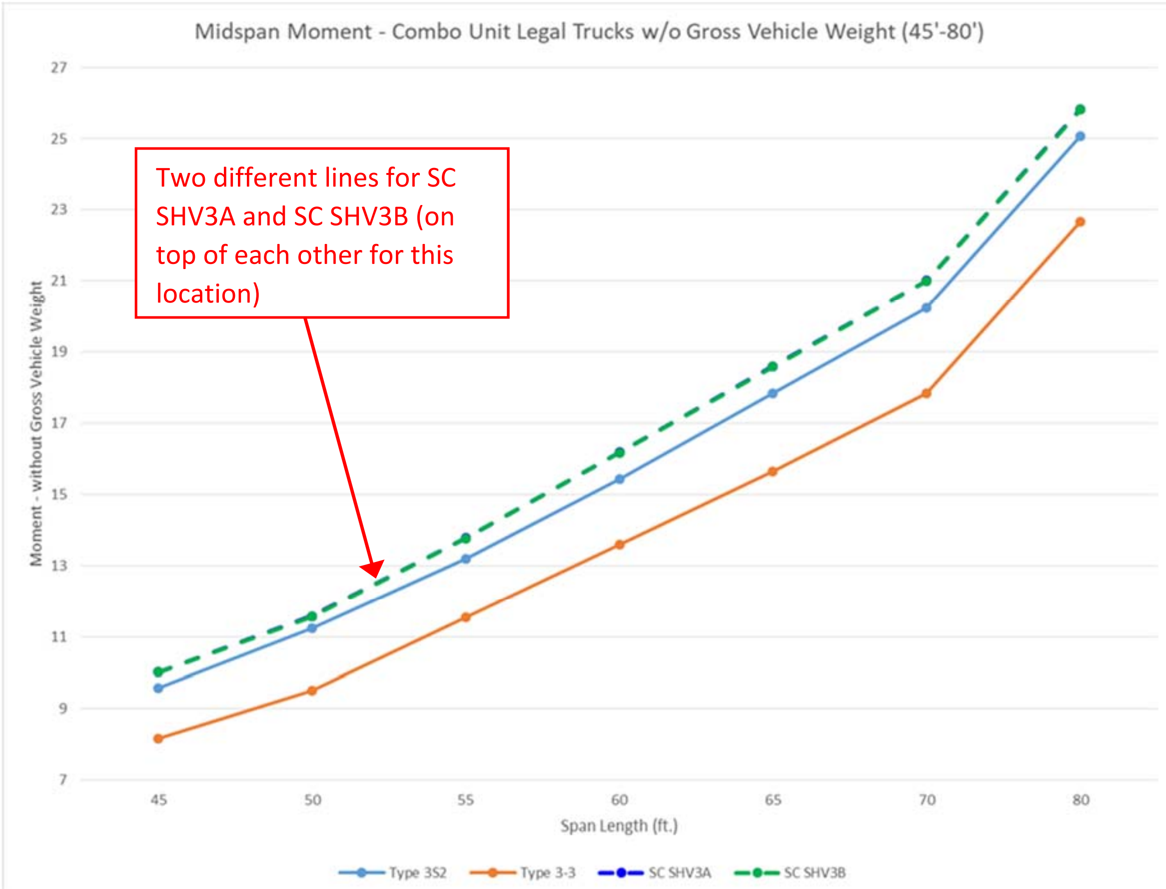

Figure 3-11: 1-Span arrangement - SC SHV3A and SC SHV3B controlling for 5-or-More Axle Trucks (Combination Trucks)

3.3 Permit Loads

The Permit Trucks that were evaluated in the parametric study consisted of the SCDOT 100k, 120k and 130k Permit Trucks and the SCDOT 160k & 177.7k Cranes. As illustrated in Figure 3-12, for short 1-span bridges less than 35’, the Permit Cranes do not control over the SCDOT “general” Permit Trucks. Figure 3-12 is representative for all span arrangements (including 2- and 3-span bridges) that for under approximately 20’-35’, the SC-120k and SC-130k Permit Trucks control, while for over that length, the 177.7k Crane Permit Trucks control. However, it is still recommended that all 5 permit trucks from the study be run as SCDOT finalizes their permitting procedures and methods as certain weight vehicles may have different permitting allowances such as yearly, monthly or daily permits.
In comparison to the HL-93 Design Loading Vehicles, Figures 3-13 through 3-15 show locations where the Permit Cranes do control over the HL-93 Design Loading Vehicles, while all the standard permit trucks are less than the HL-93 Design Loadings. Appendix C has graphs with additional comparisons between the HL-93 Design Loadings and the Permit Trucks for all span lengths and arrangements. For an overall summary, please see the Executive Summary at the beginning of the report.

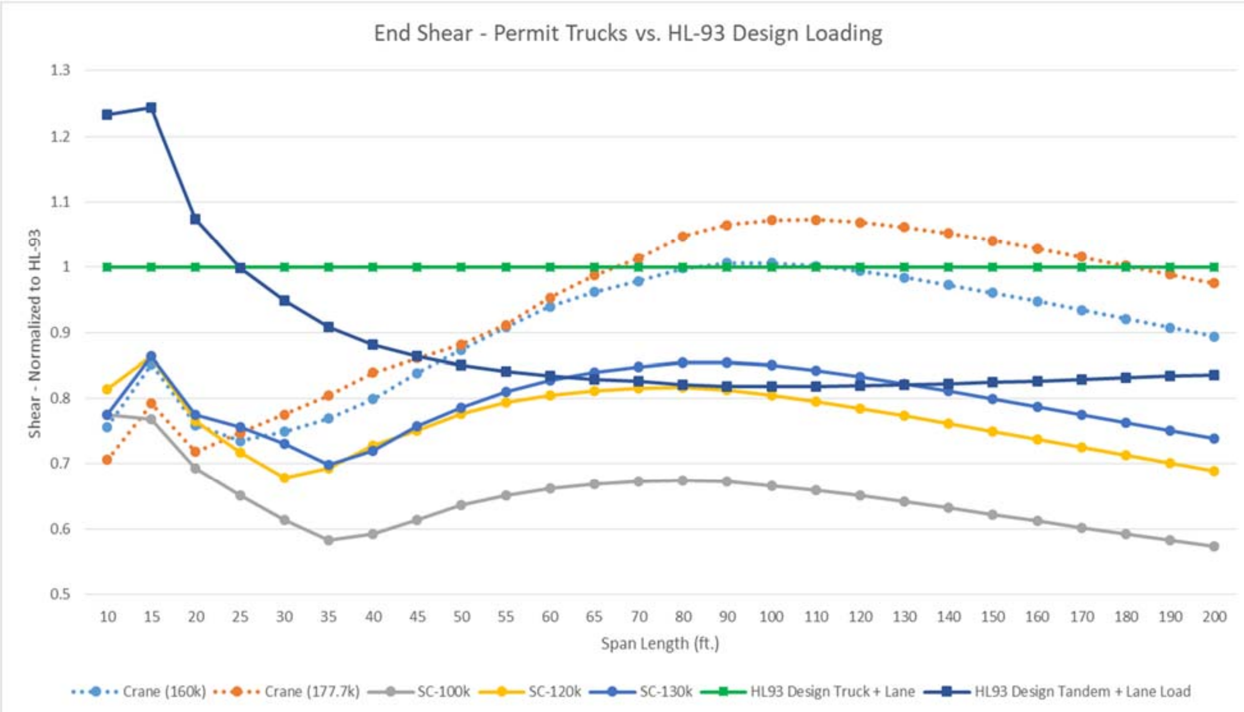

Figure 3-12: 1-Span arrangement – 177.7k Permit Crane controls Permit Vehicles over 30’

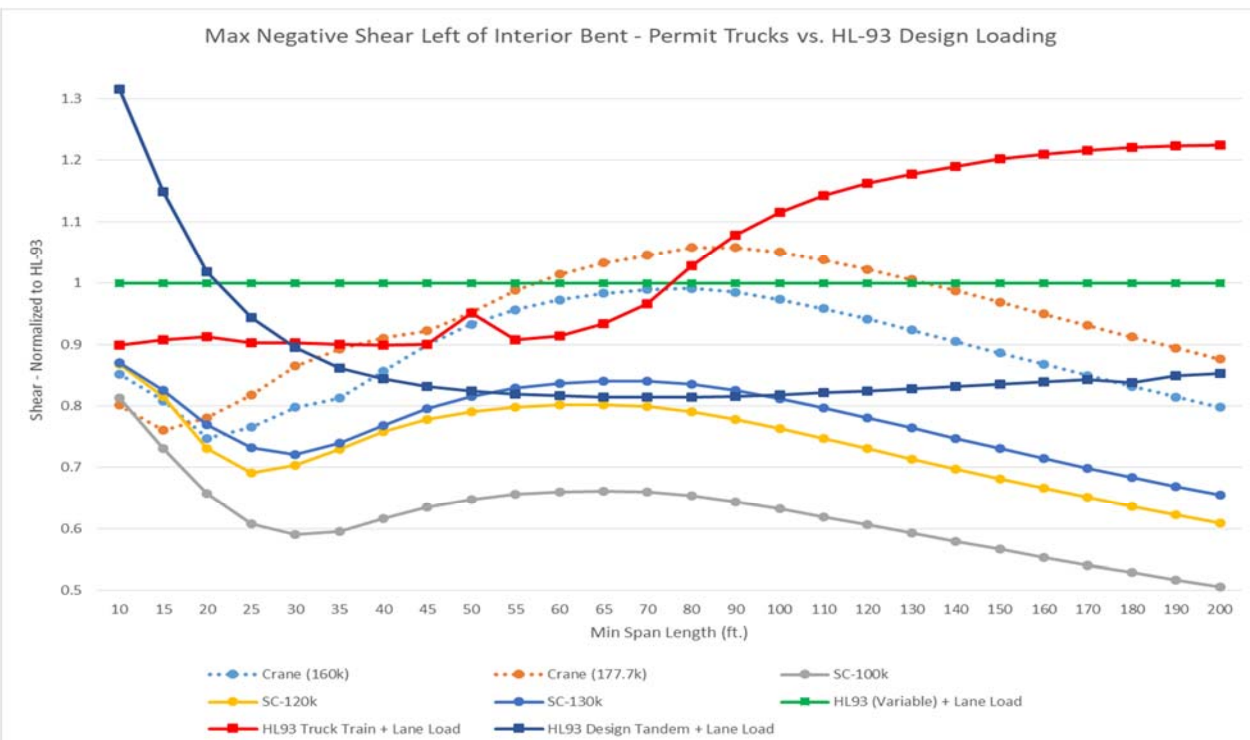

Figure 3-13: 3-Span arrangement – 177.7k Permit Crane controls Rating Factor for Span Lengths 55’-90’

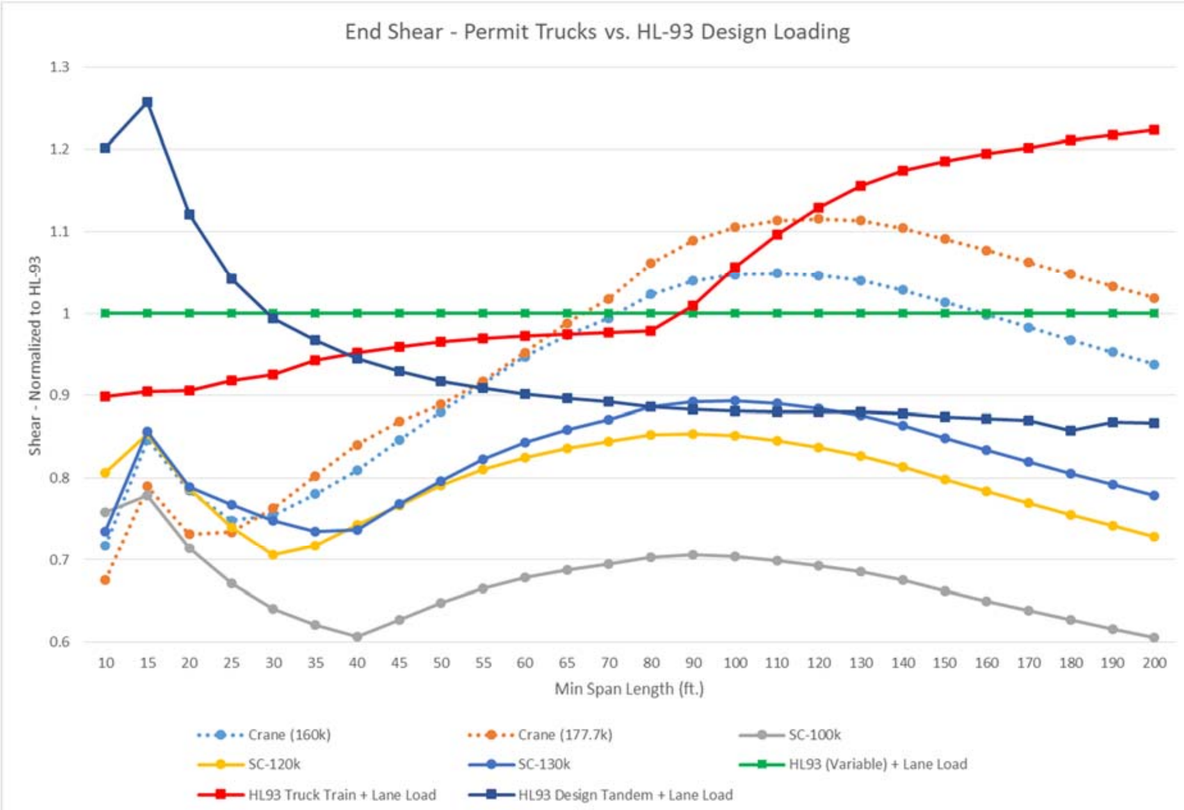

<u>Figure 3-14: 3-Span arrangement – 177.7k & 160k Permit Cranes control Rating Factor for Span Lengths 70'-110'</u>

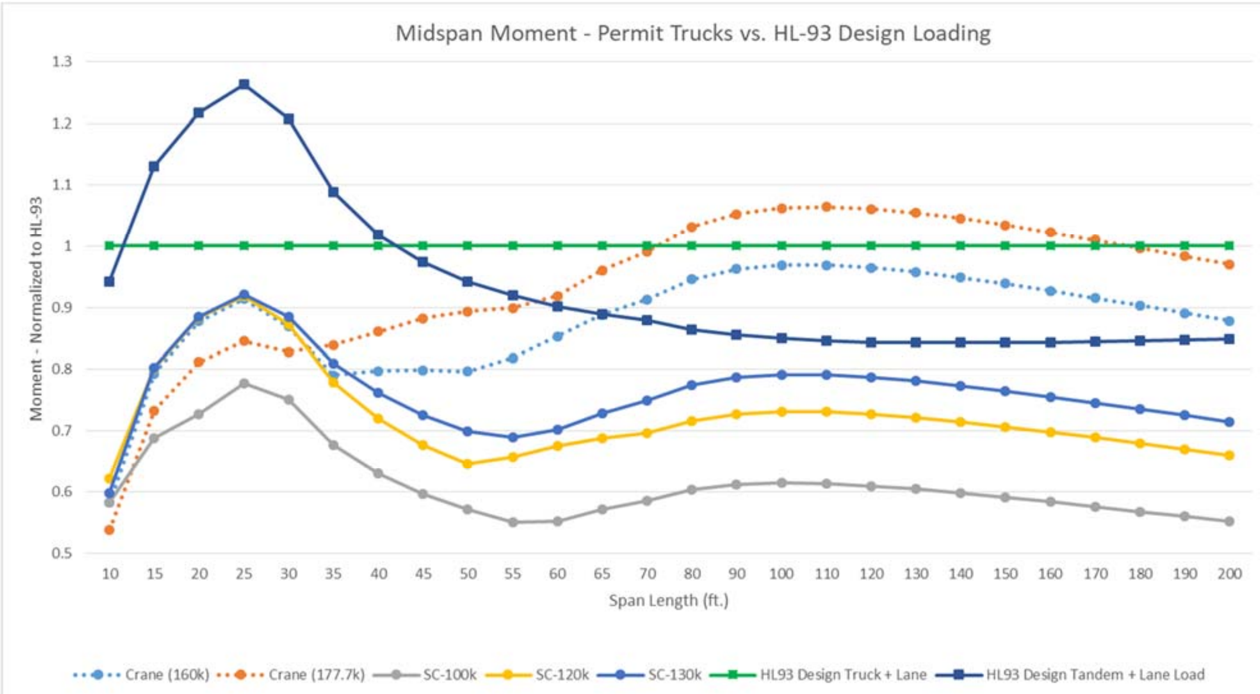

Figure 3-15: 1-Span arrangement – 177.7k Permit Crane controls Rating Factor for Span Lengths 70'-170'

APPENDIX A

Permit Truck Requirement Documents

Web publication 05/01/2017

**GUIDELINES FOR MOVEMENT OVER
SOUTH CAROLINA HIGHWAYS OF
OVERSIZE AND OVERWEIGHT (OSOW) VEHICLES AND LOADS**

Statute Authority: SC Code of Law Section 56-5-4010 through 56-5-4230 and 57-3-130 through 57-3-190
The caption and/or section headings contained in these guidelines are not binding and are only used for reference purposes.

A. **PARTIAL EXEMPTIONS FOR IMPLEMENTS OF HUSBANDRY, FIRE APPARATUS, FORESTRY AND ROAD MACHINERY:** SC Code of Law 56-5-4020

(A) Except as provided in Section 56-5-4140(2), the provisions of this article governing size, weight, and load do not apply to fire apparatus, road machinery or implements, and products of husbandry including farm tractors, timber equipment, liquid fertilizer storage facilities, and vehicles or combinations of vehicles used to transport, store, or spread lime, nitrogen, or other soil improvement products for agricultural purposes moved upon the highways so as not to damage the highways nor unduly interfere with highway traffic, or to vehicles operated under terms of special permits issued pursuant to this chapter. The exemptions do not apply to Section 56-5-4230. With regard to vehicles or combinations of vehicles used to transport, store, or spread soil improvement products and to transport products of husbandry exempted pursuant to this section, the owners shall obtain an annual permit to operate the vehicle as provided in Section 57-3-130 which prescribes the specific conditions of the exemption.

(B) For purposes of this section, 'timber equipment' means implements of silviculture including, but not limited to, machinery used in establishing, tending, harvesting, and protecting forest crops such as tree shears, chippers, slashers, log loaders, skidders, and fellers.

(C) None of the vehicles or devices exempted by this section may exceed twelve feet in width, except farm implements which may not exceed sixteen feet in width, and they may be moved only in clear weather conditions during daylight hours.

B. **DISCRETIONARY OS/OW PERMIT**: The Department may exercise its discretion in issuing permits for transporting non-divisible loads and/or vehicles which exceed the legal size and weight limits, provided that:

1) Non-divisible is defined as a load consisting of one single item that cannot be readily disassembled so as to reduce the size and/or gross weight to the legal limits. Emergency exceptions shall only be approved by the Permit Director. See Code of Federal Regulations, Title 23, Part 658.5 for definition of non-divisible load or vehicle.
2) Every such movement shall be routed over highways having 12 foot wide or wider lanes whenever possible, except in emergencies or where there is good cause to show that such movement is in the public interest.
3) The Department may limit or prescribe conditions of operation of such vehicles.
4) The Department may require such insurance and/or other security as it deems necessary.
5) Such movement is made so as not to damage the highways nor unduly interfere with highway traffic.
6) The permit must be carried in the vehicle or combination of vehicles to which it refers and must be open to inspection by a police officer or an authorized agent of the authority granting the permit. South Carolina Code of Law

E. **MAXIMUM ALLOWABLE SIZES AND WEIGHTS GRANTED BY PERMIT:** Any exceptions to the maximum limits shall be submitted to the Department with the appropriate drawings, pictures, requested route and reasons for the move. The request shall be submitted no less than 5 days minimum of the proposed move date for approval or disapproval. Any approval shall be at the discretion of the Department.

1) **Overall Length**:
   a) Non Divisible Loads: The maximum overall length shall be 125 feet.
   b) Mobile Homes: The maximum overall length shall be 100 feet (mobile home 80 feet or less).
   c) Structural Material: A pole, pipe, log or other structural material exceeding 80 feet in length may not be transported unless a permit is obtained. The load must be non-divisible. (See SC Code of Law 56-5-4090 for legal dimensions.)

2) **Overhang**:
   a) Permits may be issued for a non-divisible load with a maximum rear overhang of 15 feet on a trailer that is LESS than 48 feet. A maximum rear overhang of 10 feet is allowed on a 48 foot or 53 foot trailer. Flags and a rotating amber beacon or strobe light must be on the rear of the load OR flags on the rear of the load and a rear civilian escort with such warning devices required by the Department.
   b) A maximum of 3 feet front overhang is allowed on all trailers.
   c) In all cases, loads on expandable or pole trailers with more than a 6 feet rear overhang shall be equipped with flags and a rotating amber beacon or strobe light on the rear of the load OR flags and a rear escort with such warning devices required by the Department.

3) **Overall Height**:
   a) The maximum overall height of any permitted load must be at least 3 inches less than any overhead structures on a route granted by the permit.
   b) The transporter shall be responsible for checking all overhead vertical clearances and shall make all provisions for raising or removing overhead wires, cables, traffic signals, etc., sufficiently in advance and no less than a minimum of 3 working days prior to the move, to eliminate delays to the highway traffic.
   c) **Route Survey**: ALL loads 16 feet in height and above must provide a department approved route survey prior to permit issuance. A front escort vehicle with a height pole shall be required during the entire move.

4) **Overall Width**:
   a) Mobile homes - 16 feet maximum
   b) Non Divisible Loads - 16 feet maximum

5) **Gross Weights**:

a) Two axle single unit vehicle	40,000 lbs.
b) Three axle single unit vehicle	50,000 lbs.
c) Four or more axle single unit vehicle	65,000 lbs.
d) Combination of vehicles with three axles	55,000 lbs.
e) Combination of vehicles with four axles	70,000 lbs.
f) Combination of vehicles with five axles	90,000 lbs.
g) Combination of vehicles with six axles	110,000 lbs.
h) Combination of vehicles with seven axles	130,000 lbs.

MAXIMUM AXLE WEIGHTS: 20,000 lbs on single axle, 40,000 lbs on tandem axle, 60,000 lbs on tridem axle. Total not to exceed gross vehicle weight on permit. When transporting multiple pieces, gross weight must be legal.

SEE ATTACHED PAGE(S) FOR ORIGIN, DESTINATION AND DEFINED ROUTES OF TRAVEL

No travel shall be allowed during inclement weather such as heavy rain or fog when visibility is restricted to less than 1000 feet. Travel prohibited during periods of high wind or when highways are slippery or hazardous due to ice, snow or sleet.

The South Carolina Transport Police or Highway Patrol may direct a vehicle off the highway to a safe place. Detour vertical obstructions where necessary.

The mover shall be responsible for checking all overhead vertical clearances and shall make provisions for raising or removal of overhead wires, cables, traffic signals, etc. at least three (3) days in advance of move.

In pursuant to SC Code of Law 57-3-130 (B)(3)(c), it is the responsibility of the carrier to comply with all Federal Motor Carrier Safety Regulations and applicable State and Federal Laws, including, but not limited to, speed, tire size, brakes and lighting.

For all railroad grade crossing, comply with 56-5-2725 of the SC Code of Laws.

Special Restrictions

The permittee shall provide signs, front and rear, reading WIDE LOAD or OVERSIZED LOAD with letters 12 inches high and at least 1 1/2 inches wide. Red flags must be displayed at each outer four corners of the load or mobile home. Turn signals and brake lights in working order must be displayed.
TRAVEL PERMITTED one half (1/2) hour after sunrise to one half (1/2) hour before sunset Monday through Saturday EXCEPT travel prohibited in close proximity of large urban areas between 7am-9am all days and 3pm-6pm on school days and 4:30pm-6pm on non-school days. REDUCE SPEED WHENTRAVELING THROUGH SCDOT WORK ZONE CONSTRUCTION SITES. Permittee is responsible for immediately replacing to SCDOT standards all traffic control devices (signs, cones, barrels, etc.) that are knocked over or destroyed upon contact. TRAVEL IS PROHIBITED on Friday and Saturday from Memorial Day through Labor Day over routes east of I-95, including but not limited to; US-378, US-327, US-76, US-576, US-501 AND SC-9. And on US-17 from the NC State line to points south of Myrtle Beach and on any routes in the Myrtle Beach vicinity.
TRAVEL IS PROHIBITED OVER POSTED BRIDGES WITH WEIGHT. BRIDGES MAY BECOME POSTED ALONG THE PERMITTED ROUTE DURING THE PERMIT DATE RANGE. IT IS THE RESPONSIBILITY OF THE PERMITTEE TO CALL THE PERMIT OFFICE (803) 737-6769 FOR ROUTE MODIFICATION.
TRAVEL IS PROHIBITED on Sunday and from 12 noon the day before until 12 noon the day after the following holidays: New Years Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. Reduce speed to 45 MPH over all bridge crossings.

Valid: **10/09/13 to 10/01/14**
DOT #: **933168**

Load Description: **STEEL - RAILROAD MATERIAL**

Tractor Make: **N/A** License: **N/A** Trailer License: **N/A**

Overall Dimensions: Width: **12'0"** Height: **14'6"** Length: **100'0"**

Gross Weight: **100,000** on **5** axles

Origin: **N/A** Destination: **N/A**

State Fee: **$150.00** Issued: 10/08/13 10:41 **9840**

SPECIAL CIRCUMSTANCES

Refer to GDOT Rule 672-2-.06 for escort requirements and Rule 672-2-.03 (i) for requirements on reporting accidents/incidents involving permitted loads.
Travel allowed on all authorized highways and roads during daylight hours 30 minutes after sunrise and 30 minutes before sunset only.
No permitted load is authorized to travel during inclement weather and holidays as defined in Department Rule 672-2-.03.(c).
COPY OF THIS PERMIT NOT VALID

ALL PERMITTED LOADS WITH OR WITHOUT TRANSPONDERS MUST STOP AT EVERY WEIGH STATION.

GENERAL CONDITIONS

This permit is granted under and subject to the vehicle laws of Georgia and to all applicable general and specific conditions for operating oversize, as promulgated and published by the State Transportation Board. In addition to complying with all applicable Federal and State Laws and regulations, permittee must comply with applicable County and Municipal ordinances when traveling off the State Highway System. Any false statement of a material fact on the permit application may result in the denial of future permits to the permittee. Non-compliance with specific conditions stated in the preceding sections of this permit renders this permit subject to immediate revocation and confiscation by any police officer or any authorized member of the Department.
This permit does not give the permittee the right to use or damage private property in any way. The permittee shall comply with all rules posted on any bridge or road traversed. Any damage caused directly or indirectly to any road surface, bridge, or other structure, whether maintained by the Georgia Department of Transportation or by another, by the operation of the vehicle, is the responsibility of the permittee.

(*132,000 pounds with minimum 51-foot wheelbase)
(annual permit - one specific route) (PF-2A)

Annual Permit inquiries: 1-888-221-8166

Single Trip Permit

Fee	$12 - $48 (state fee)
Valid	10 calendar days for one single trip
Width	15 feet maximum (mobile home may be permitted up to 16 feet)
Length	No overall length limitations, with the following exception: 105 feet maximum for mobile homes/total combination
Height	Maximum determined by vertical clearance along authorized route of travel
Overweight	One item route specific (exact origin, detailed route and destination)
Identified by	Power unit license and serial number
Issued to	Registered owner of power unit

- The following weights do not apply to self-propelled vehicles or off-road equipment.
- Maximum permit weight allowed is determined by the number of load supporting axles; allowable bridge structure weights.

Axle weights:

Steer axle	20,000 lbs.
Single axle	25,000 lbs.
Tandem axles	50,000 lbs.
Tridem axles	60,000 lbs.
4 or more axle grouping	68,000 lbs.

Rev. 8/2012

NC

Publication C-11

Sealed Ship Containers

A sealed ship container is defined as containerized freight being transported to or from a designated seaport and has or will be transported by marine shipment for International trade with the original unbroken seal or a replacement seal affixed by an authorized government agency.

A sealed ship container may qualify for a permit if:

- **All dimensions of width, height and length do not exceed limits as specified in North Carolina General Statutes, and**
- **Traveling to or from a designated seaport (either in state or out of state), and**
- **Has been or will be transported intact by marine shipment, and**
- **Power unit is licensed for 80,000 lbs., and**
- **Vehicle/vehicle combination has at least five axles, and**
- **Proper documentation (shipper's bill of lading and/or trucking bill of lading) of sealed commodity being transported is available for enforcement inspection.**

Annual Permit

Gross Weights -
5 axles - 112,000 lbs. (94,500 lbs. – wheelbase less than 51')
(Maximum of 10 specific routes with exact origin, detailed route of travel and exact destination)

6 axles - 120,000 lbs. (108,000 lbs. – wheelbase less than 51')
(One specific route with exact origin, detailed route of travel and exact destination)

7 axles - 132,000 lbs. (122,000 lbs. – wheelbase less than 51')
(One specific route with exact origin, detailed route of travel and exact destination)

or

90,000 lbs. gross weight with a minimum of 5 axles and a minimum of a 51' wheelbase – good on all roads, posted roads and posted bridges must be observed. (A combination with an extreme wheelbase less than 51' does not qualify for this permit.)

Axle Weights -

Steer	20,000 lbs.
Single	25,000 lbs.
Tandem	50,000 lbs.
Tridem	60,000 lbs.
Four or more grouping	68,000 lbs.

Width-	8'6" (legal)
Height-	13'6" (legal)
Length-	Legal limit as allowed by North Carolina General Statutes
Fee-	$100 per vehicle
Identified-	Truck license and last five digits of truck serial number
Issued-	To the registered owner of the power unit, if leased, copy of lease is required.

Legal Trucks: 2-Span (Normalized to HL-93 Design Truck) – *Negative Shear Left of Interior Bent*

Note: Spike at 50' in the graphs for Max Negative Shear Left of Interior Bent is due to the spacing of the Truck Train Vehicles at 50' (causing a spike at that location)

Legal Trucks: 3-Span (Normalized to HL-93 Design Truck) – *Max Negative Shear Left of Interior Bent*

Note: Spike at 50' in the graphs for Max Negative Shear Left of Interior Bent is due to the spacing of the Truck Train Vehicles at 50' (causing a spike at that location)
