### Job Narrative 490-37639-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 10/12/2013 8:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.1° C and 1.5° C.

#### GC/MS VOA

Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 115059 were outside control limits for tetrachloroethene. The associated laboratory control sample (LCS) recovery met acceptance criteria.

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 115295. See LCS/LCSD

Method(s) 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for batch 115295 recovered outside control limits for the following analytes: methyl acetate. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The method blank for batch 115295 contained methylene chloride above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No other analytical or quality issues were noted.

#### GC/MS Semi VOA

Method(s) 8270D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 114792.

Method(s) 8270D: The method blank for batch 114675 contained Bis(2-ethylhexyl) phthalate above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No other analytical or quality issues were noted.

#### GC Semi VOA

Method(s) 8081B: The matrix spike / matrix spike duplicate (MS/MSD) precision for batch 114328 was outside control limits.

Method(s) 8081B: The following samples were diluted due to the nature of the sample matrix: TACT 33 SB-4 (0-2) (490-37639-1). Elevated reporting limits (RLs) are provided.

Method(s) 8081B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 114718.

Method(s) 8082A: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 114715.

No other analytical or quality issues were noted.

#### Metals

Method(s) 6010C: The following sample(s) was diluted due to the abundance of Fe: 490-37639-f-3-a TACT 33 TW-4 (14-18) (490-37639-3). Elevated reporting limits (RLs) are provided.

Method(s) 6010C: The method blank for batch 490-114861 contained As, Fe, and K above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

### Laboratory: TestAmerica Nashville (Continued)

Method(s) 6010B, 6010C: The serial dilution performed for the following sample(s) associated with batch 490-114861 was outside control limits for Ca and Mg: 490-37638-e-13-a (490-37638-13 SD)

Method(s) 6010C: The post digestion spike % recovery for Ca associated with batch 490-115747 was outside of control limits.

Method(s) 6010C: The matrix spike(MS) recoveries for batch 490-115747 were outside control limits for Mg. The associated laboratory control sample (LCS) recovery met acceptance criteria.

Method(s) 6010C: The method blank for batch 490-115747 contained K< Mn, and Na above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 7471B: The matrix spike / matrix spike duplicate (MS/MSD) percent recoveries and %RPD for batch 116388 were outside control limits. This is attributed to non-homogeneity of the sample matrix.

No other analytical or quality issues were noted.

### General Chemistry

Method(s) 7196A: To verify the absence of an interference, EPA Method 7196A requires the sample to be diluted until the matrix spike (MS) recovery is within 85-115%. For this reason, the following sample(s) was diluted: (490-37639-3 MS), (490-37639-3 MSD), TACT 33 TW-4 (14-18) (490-37639-3). Elevated reporting limits (RLs) are provided.

Method(s) 7196A: The following sample(s) was received with insufficient time remaining to perform the analysis within holding time: TACT 33 TW-4 (14-18) (490-37639-3).

Method(s) 7196A: The matrix spike (MS) recovery for batch 299722 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

Method(s) 7196A: To verify the absence of an interference, EPA Method 7196A requires the sample to be diluted until the matrix spike (MS) recovery is within 85-115%. For this reason, the following sample(s) was diluted: (490-37639-1 DU), (490-37639-1 PDS), TACT 33 SB-4 (0-2) (490-37639-1). Elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

### Organic Prep

Method(s) 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 114715, 114718 and 114792.

No other analytical or quality issues were noted.

### VOA Prep

No analytical or quality issues were noted.

#### Comments

No additional comments.

#### Receipt

The samples were received on 11/22/2014 8:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.4° C.

#### GC/MS VOA

Method(s) 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for batch 208949 recovered outside control limits for the following analytes: methyl acetate. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 208949 recovered outside control limits for the following analytes: dichlorobromomethane

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 209880 recovered above the upper control limit for multiple analytes. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCVIS 490-209880/3), TRACT 4D SB-1 (6-10) (490-67111-2).

Method(s) 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for batch 209880 recovered outside control limits for the following analytes: 1,2,3-trichlorobenzene and tetrachloroethene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for batch 209880 recovered outside control limits for the following analytes: toluene, bromomethane and tetrachloroethene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 209880 recovered outside control limits for the following analytes: chloromethane

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 209880

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC/MS Semi VOA

Method(s) 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for batch 209390 were outside control limits for Benzaldehyde. Sample matrix interference and/or non-homogeneity are suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC Semi VOA

Method(s) 8081B: The following sample(s) was diluted due to the nature of the sample matrix: TRACT 4D SB-1 (0-2) (490-67111-1). Elevated reporting limits (RLs) are provided.

Method(s) 8081B: The continuing calibration verification (CCV) associated with batch 212364 recovered above the upper control limit for several analytes. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: TRACT 4D SB-1 (0-2) (490-67111-1), TRACT 4D SB-1 (6-10) (490-67111-2).

Method(s) 8081B: Surrogate recovery for the following sample(s) was outside control limits: TRACT 4D SB-1 (0-2) (490-67111-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

#### Laboratory: TestAmerica Nashville (Continued)

Method(s) 8081B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 209847 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 8082A: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for batch 209397 recovered outside control limits for the following analytes: 1016. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Metals

Method(s) 6010C: The method blank for batch 214150 contained Na above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### Job Narrative 490-66957-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 11/21/2014 8:50 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 0.3° C, 0.9° C, 1.9° C and 2.6° C.

Except: One sodium bisulfate preserved vial was broken during shipment: Tract 4C SB-1 (42-46) (490-66957-1)

#### GC/MS VOA

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 209880 recovered above the upper control limit for multiple analytes. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCVIS 490-209880/3), Tract 4 SB-2 (0-2) (490-66957-6), Tract 4 SB-2 (40-44) (490-66957-7), Tract 4A SB-1 (0-2) (490-66957-3), Tract 4A SB-1 (32-36) (490-66957-4), Tract 4C SB-1 (42-46) (490-66957-1).

Method(s) 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for batch 209880 recovered outside control limits for the following analytes: 1,2,3-trichlorobenzene and tetrachloroethene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for batch 209880 recovered outside control limits for the following analytes: toluene, bromomethane and tetrachloroethene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 209880 recovered outside control limits for the following analytes: chloromethane

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 209880

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC/MS Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### GC Semi VOA

Method(s) 8081B: The continuing calibration verification (CCV) associated with batch 212364 recovered above the upper control limit for several analytes. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: Tract 4 SB-2 (0-2) (490-66957-6), Tract 4 SB-2 (40-44) (490-66957-7), Tract 4A SB-1 (0-2) (490-66957-3), Tract 4A SB-1 (32-36) (490-66957-4), Tract 4C SB-1 (42-46) (490-66957-1).

Method(s) 8081B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 209484 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 8081B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 208487.

Method(s) 8081B: The laboratory control sample (LCS) for batch 209484 recovered outside control limits for the following analytes: Endrin Aldehyde. The associated sample(s) was re-prepared and/or re-analyzed outside holding time.

Method(s) 8081B: Reanalysis of the following sample(s) was performed outside of the analytical holding time: Tract 4 SB-2 (0-2) (490-66957-6), Tract 4 SB-2 (40-44) (490-66957-7), Tract 4A SB-1 (0-2) (490-66957-3), Tract 4A SB-1 (32-36) (490-66957-4), Tract 4C

SB-1 (42-46) (490-66957-1).

Method(s) 8082A: Surrogate recovery for the following sample(s) was outside the upper control limit: Tract 4A SB-1 (0-2) (490-66957-3), Tract 4C SB-1 (42-46) (490-66957-1). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8082, 8082A: The surrogate recovery for the blank associated with batch 209484 was outside the upper control limits. All associated sample surrogates fell within acceptance criteria; therefore, the data have been reported.

Method(s) 8082, 8082A: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for batch 209484 recovered outside control limits for the following analytes: 1016. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Metals

Method(s) 6010C: The absolute value of TI was above the reporting limit. ICP spectra has been manually reviewed and TI can be reported as ND. SB-O (0-5') (490-66935-12)

Method(s) 6010C: The method blank for batch 211379 contained Na above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 207941.

Method(s) 8270D: The laboratory control sample (LCS) for batch 207941 recovered outside control limits for the following analytes: Atrazine and Benzaldehyde. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8270D: The laboratory control sample (LCS) for batch 209735 recovered outside control limits for the following analyte: Benzaldehyde. Benzaldehyde has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC Semi VOA

Method(s) 8081B: The continuing calibration verification (CCV) associated with batch 210987 recovered above the upper control limit for several analytes. The samples associated with this CCV were non-detect for the affected analytes; therefore, the data has been reported. The following samples are impacted: NOV 2014 DRUM (490-66736-1), TRACT 4 SB-1 (4-8) (490-66802-1), TRACT 4B SB-1 (1-3) (490-66802-3), TRACT 4B SB-1 (18-22) (490-66802-4), TRACT 4C SB-1 (0-2) (490-66802-6).

Method(s) 8081B: The laboratory control sample (LCS) for batch 207937 recovered outside control limits for the following analytes: Endrin

On November 24, 2014, two solid samples were received at TestAmerica's Richland laboratory for radiochemical analysis. Upon receipt, the samples were assigned the TestAmerica identification numbers as described on the cover page of the Analytical Data Package report form. The samples were assigned to Lot Numbers J4K260402.

#### **II. Sample Receipt**

The sample was received in good condition and no anomalies were noted during check-in.

#### **III. Analytical Results/Methodology**

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information; analytical results and the appropriate associated statistical uncertainties.

The analysis requested was:

**Gamma Spectrometry**

#### **IV. Quality Control**

The analytical result for each analysis performed includes a minimum of one laboratory control sample (LCS), and one reagent blank sample analysis. Any exceptions have been noted in the "Comments" section.

#### **V. Comments**

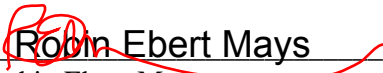

##### **Gamma Spectrometry**

##### Gamma Analysis:

The LCS, batch blank and sample results are within acceptance limits.

### Uncertainty Estimation

TestAmerica Richland has adopted the internationally accepted approach to estimating uncertainties described in "NIST Technical Note 1297, 1994 Edition". The approach, "Law of Propagation of Errors", involves the identification of all variables in an analytical method which are used to derive a result. These variables are related to the analytical result (R) by some functional relationship,  $R = \text{constants} * f(x,y,z,\dots)$ . The components (x,y,z) are evaluated to determine their contribution to the overall method uncertainty. The individual component uncertainties ( $u_i$ ) are then combined using a statistical model that provides the most probable overall uncertainty value. All component uncertainties are categorized as type A, evaluated by statistical methods, or type B, evaluated by other means. Uncertainties not included in the components, such as sample homogeneity, are combined with the component uncertainty as the square root of the sum-of-the-squares of the individual uncertainties. The uncertainty associated with the derived result is the combined uncertainty ( $u_c$ ) multiplied by the coverage factor (1,2, or 3).

When three or more sample replicates are used to derive the analytical result, the type A uncertainty is the standard deviation of the mean value ( $S/\sqrt{n}$ ), where S is the standard deviation of the derived results. The type B uncertainties are all other random or non-random components that are not included in the standard deviation.

The derivation of the general "Law of Propagation of Errors" equations and specific example are available on request.

## Report Definitions

<b>Action Lev</b>	An agreed upon activity level used to trigger some action when the final result is greater than or equal to the Action Level. Often the Action Level is related to the Decision Limit.
<b>Batch</b>	The QC preparation batch number that relates laboratory samples to QC samples that were prepared and analyzed together.
<b>Bias</b>	Defined by the equation (Result/Expected)-1 as defined by ANSI N13.30.
<b>COC No</b>	Chain of Custody Number assigned by the Client or TestAmerica.
<b>Count Error (#s)</b>	Poisson counting statistics of the gross sample count and background. The uncertainty is absolute and in the same units as the result. For Liquid Scintillation Counting (LSC) the batch blank count is the background.
<b>Total Uncert (#s) <i>u<sub>c</sub> - Combined Uncertainty.</i></b>	All known uncertainties associated with the preparation and analysis of the sample are propagated to give a measure of the uncertainty associated with the result, <i>u<sub>c</sub> the combined uncertainty</i> . The uncertainty is absolute and in the same units as the result.
<b>(#s), Coverage Factor</b>	The coverage factor defines the width of the confidence interval, 1, 2 or 3 standard deviations.
<b>CRDL (RL)</b>	Contractual Required Detection Limit as defined in the Client's Statement Of Work or TestAmerica "default" nominal detection limit. Often referred to the reporting level (RL)
<b>Lc</b>	Decision Level based on instrument background or blank, adjusted by the Efficiency, Chemical Yield, and Volume associated with the sample. The Type I error probability is approximately 5%. $Lc = (1.645 * \sqrt{2 * (BkgrndCnt / BkgrndCntMin) / SCntMin}) * (ConvFct / (Eff * Yld * Abn * Vol) * IngrFct)$ . For LSC methods the batch blank is used as a measure of the background variability. Lc cannot be calculated when the background count is zero.
<b>Lot-Sample No</b>	The number assigned by the LIMS software to track samples received on the same day for a given client. The sample number is a sequential number assigned to each sample in the Lot.
<b>MDC MDA</b>	Detection Level based on instrument background or blank, adjusted by the Efficiency, Chemical Yield, and Volume with a Type I and II error probability of approximately 5%. $MDC = (4.65 * \sqrt{((BkgrndCnt / BkgrndCntMin) / SCntMin) + 2.71 / SCntMin}) * (ConvFct / (Eff * Yld * Abn * Vol) * IngrFct)$ . For LSC methods the batch blank is used as a measure of the background variability.
<b>Primary Detector</b>	The instrument identifier associated with the analysis of the sample aliquot.
<b>Ratio U-234/U-238</b>	The U-234 result divided by the U-238 result. The U-234/U-238 ratio for natural uranium in NIST SRM 4321C is 1.038.
<b>Rst/MDC</b>	Ratio of the Result to the MDC. A value greater than 1 may indicate activity above background at a high level of confidence. Caution should be used when applying this factor and it should be used in concert with the qualifiers associated with the result.
<b>Rst/TotUcert</b>	Ratio of the Result to the Total Uncertainty. If the uncertainty has a coverage factor of 2 a value greater than 1 may indicate activity above background at approximately the 95% level of confidence assuming a two-sided confidence interval. Caution should be used when applying this factor and it should be used in concert with the qualifiers associated with the result.
<b>Report DB No</b>	Sample Identifier used by the report system. The number is based upon the first five digits of the <b>Work Order</b> Number.
<b>RER</b>	The equation Replicate Error Ratio = $(S-D) / [\sqrt{TPUs^2 + TPUd^2}]$ as defined by ICPT BOA where S is the original sample result, D is the result of the duplicate, TPUs is the total uncertainty of the original sample and TPUd is the total uncertainty of the duplicate sample.
<b>SDG</b>	Sample Delivery Group Number assigned by the Client or assigned by TestAmerica upon sample receipt.
<b>Sum Rpt Alpha Spec Rst(s)</b>	The sum of the reported alpha spec results for tests derived from the same sample excluding duplicate result where the results are in the same units.
<b>Work Order</b>	The LIMS software assign test specific identifier.
<b>Yield</b>	The recovery of the tracer added to the sample such as Pu-242 used to trace a Pu-239/40 method.

### CASE NARRATIVE

#### **I. Introduction**

Between the dates of November 19 and November 21, 2014, five water and ten soil samples were received at TestAmerica's Richland laboratory for radiochemical analysis. Upon receipt, the samples were assigned the TestAmerica identification numbers as described on the cover page of the Analytical Data Package report form. The samples were assigned to Lot Numbers J4K190429, J4K200421 & J4K210420.

#### **II. Sample Receipt**

The sample was received in good condition and no anomalies were noted during check-in.

#### **III. Analytical Results/Methodology**

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information; analytical results and the appropriate associated statistical uncertainties.

The analysis requested was:

**Gamma Spectrometry**

Gamma by Method RL-GAM-001

**Liquid Scintillation**

Radon 222 by method RL-LSC-019

**Alpha Scintillation Counting**

Radium-226 by method RL-RA-001 (EPA 903.1)

#### **IV. Quality Control**

The analytical result for each analysis performed includes a minimum of one laboratory control sample (LCS), and one reagent blank sample analysis. Any exceptions have been noted in the "Comments" section.

#### **V. Comments**

##### **Gamma Spectrometry**

###### Gamma Analysis:

The samples were analyzed in two batches:

###### Batch 4325046:

The LCS, batch blank, sample and sample duplicate results are within acceptance limits.

###### Batch 4329026:

The LCS, batch blank, sample and sample duplicate results are within acceptance limits.

##### **Liquid Scintillation**

###### Radon 222 Analysis:

The samples were analyzed in three batches:

###### Batch 4323055:

Sample TRACT 4 TW-1 and its duplicate do not meet acceptance criteria, this was confirmed by recount in batch 4325075. Suspect sample inhomogeneity as both vials of the sample contain a significant volume of silt. Except as noted, the LCS, batch blank, sample and sample duplicate results are within acceptance limits.

###### Batch 4324034:

The LCS, batch blank, sample and sample duplicate results are within acceptance limits.

###### Batch 4325058:

The LCS recoveries in this batch are low at 70 and 71%; suspect error in the make-up of the LCS vial. Except as noted, the LCS, batch blank, sample and sample duplicate results are within acceptance limits.

##### **Alpha Scintillation Counting**

###### Radium-226 Analysis:

The samples were analyzed in two batches:

###### Batch 4325047:

The samples in batch 4325047 were analyzed as received.

The initial LCS recovery exceeded acceptance criteria. The LCS was recounted with the results meeting acceptance criteria. The tracer yield for sample TRACT 4C TW-1 was significantly lower than normal due to the high volume of sediment in the sample. Except as noted, the LCS, batch blank, sample and sample duplicate results are within acceptance limits.

###### Batch 4329027:

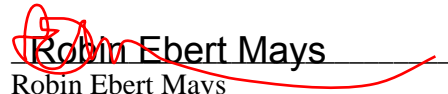

The samples in this batch were filtered prior to analysis to remove insoluble solid material per the client's approval.

The LCS, batch blank, sample duplicate and sample results are within acceptance limits.

I certify that this Certificate of Analysis is in compliance with the SOW and/or NELAC, both technically and for completeness, for other than the conditions detailed above. The Laboratory Manager or a designee, as verified by the following signature has authorized release of the data contained in this hard copy data package.

### Uncertainty Estimation

TestAmerica Richland has adopted the internationally accepted approach to estimating uncertainties described in "NIST Technical Note 1297, 1994 Edition". The approach, "Law of Propagation of Errors", involves the identification of all variables in an analytical method which are used to derive a result. These variables are related to the analytical result (R) by some functional relationship,  $R = \text{constants} * f(x,y,z,\dots)$ . The components (x,y,z) are evaluated to determine their contribution to the overall method uncertainty. The individual component uncertainties ( $u_i$ ) are then combined using a statistical model that provides the most probable overall uncertainty value. All component uncertainties are categorized as type A, evaluated by statistical methods, or type B, evaluated by other means. Uncertainties not included in the components, such as sample homogeneity, are combined with the component uncertainty as the square root of the sum-of-the-squares of the individual uncertainties. The uncertainty associated with the derived result is the combined uncertainty ( $u_c$ ) multiplied by the coverage factor (1,2, or 3).

When three or more sample replicates are used to derive the analytical result, the type A uncertainty is the standard deviation of the mean value ( $S/\sqrt{n}$ ), where S is the standard deviation of the derived results. The type B uncertainties are all other random or non-random components that are not included in the standard deviation.

The derivation of the general "Law of Propagation of Errors" equations and specific example are available on request.

## Report Definitions

<b>Action Lev</b>	An agreed upon activity level used to trigger some action when the final result is greater than or equal to the Action Level. Often the Action Level is related to the Decision Limit.
<b>Batch</b>	The QC preparation batch number that relates laboratory samples to QC samples that were prepared and analyzed together.
<b>Bias</b>	Defined by the equation (Result/Expected)-1 as defined by ANSI N13.30.
<b>COC No</b>	Chain of Custody Number assigned by the Client or TestAmerica.
<b>Count Error (#s)</b>	Poisson counting statistics of the gross sample count and background. The uncertainty is absolute and in the same units as the result. For Liquid Scintillation Counting (LSC) the batch blank count is the background.
<b>Total Uncert (#s) <i>u<sub>c</sub> - Combined Uncertainty.</i></b>	All known uncertainties associated with the preparation and analysis of the sample are propagated to give a measure of the uncertainty associated with the result, <i>u<sub>c</sub> the combined uncertainty.</i> The uncertainty is absolute and in the same units as the result.
<b>(#s), Coverage Factor</b>	The coverage factor defines the width of the confidence interval, 1, 2 or 3 standard deviations.
<b>CRDL (RL)</b>	Contractual Required Detection Limit as defined in the Client's Statement Of Work or TestAmerica "default" nominal detection limit. Often referred to the reporting level (RL)
<b>Lc</b>	Decision Level based on instrument background or blank, adjusted by the Efficiency, Chemical Yield, and Volume associated with the sample. The Type I error probability is approximately 5%. $Lc = (1.645 * \sqrt{2 * (BkgrndCnt / BkgrndCntMin) / SCntMin}) * (ConvFct / (Eff * Yld * Abn * Vol) * IngrFct)$ . For LSC methods the batch blank is used as a measure of the background variability. Lc cannot be calculated when the background count is zero.
<b>Lot-Sample No</b>	The number assigned by the LIMS software to track samples received on the same day for a given client. The sample number is a sequential number assigned to each sample in the Lot.
<b>MDC MDA</b>	Detection Level based on instrument background or blank, adjusted by the Efficiency, Chemical Yield, and Volume with a Type I and II error probability of approximately 5%. $MDC = (4.65 * \sqrt{(BkgrndCnt / BkgrndCntMin) / SCntMin} + 2.71 / SCntMin) * (ConvFct / (Eff * Yld * Abn * Vol) * IngrFct)$ . For LSC methods the batch blank is used as a measure of the background variability.
<b>Primary Detector</b>	The instrument identifier associated with the analysis of the sample aliquot.
<b>Ratio U-234/U-238</b>	The U-234 result divided by the U-238 result. The U-234/U-238 ratio for natural uranium in NIST SRM 4321C is 1.038.
<b>Rst/MDC</b>	Ratio of the Result to the MDC. A value greater than 1 may indicate activity above background at a high level of confidence. Caution should be used when applying this factor and it should be used in concert with the qualifiers associated with the result.
<b>Rst/TotUcert</b>	Ratio of the Result to the Total Uncertainty. If the uncertainty has a coverage factor of 2 a value greater than 1 may indicate activity above background at approximately the 95% level of confidence assuming a two-sided confidence interval. Caution should be used when applying this factor and it should be used in concert with the qualifiers associated with the result.
<b>Report DB No</b>	Sample Identifier used by the report system. The number is based upon the first five digits of the <b>Work Order</b> Number.
<b>RER</b>	The equation Replicate Error Ratio = $(S-D) / [\sqrt{TPUs^2 + TPUD^2}]$ as defined by ICPT BOA where S is the original sample result, D is the result of the duplicate, TPUs is the total uncertainty of the original sample and TPUD is the total uncertainty of the duplicate sample.
<b>SDG</b>	Sample Delivery Group Number assigned by the Client or assigned by TestAmerica upon sample receipt.
<b>Sum Rpt Alpha Spec Rst(s)</b>	The sum of the reported alpha spec results for tests derived from the same sample excluding duplicate result where the results are in the same units.
<b>Work Order</b>	The LIMS software assign test specific identifier.
<b>Yield</b>	The recovery of the tracer added to the sample such as Pu-242 used to trace a Pu-239/40 method.
