SCDOT File No. 10.037345A  
S&ME Project No. 1131-08-554

Dear Mr. Gaskins:

S&ME, Inc. (S&ME) has completed an Environmental Data Summary Report for the referenced properties located in Charleston County, South Carolina. Our services were provided in general accordance S&ME Proposal No. 34-08-087B, dated June 29, 2010. The attached report presents our assessment procedures, the assessment results, and our conclusions. To meet the requirements of the South Carolina Department of Health and Environmental Control (SCDHEC) well approvals, the attached report should be submitted to the SCDHEC.

We appreciate the opportunity to be of service on this project. If you have any questions concerning this report, do not hesitate to contact us.

Sincerely,

**S&ME, Inc.**

## **1. INTRODUCTION**

S&ME, Inc. (S&ME), as requested by the South Carolina Department of Transportation (SCDOT), has completed an Environmental Data Summary Report for the project identified as Port Access Road in Charleston County, South Carolina. This assessment was performed in general accordance S&ME Proposal No. 34-08-087B, dated June 29, 2010. The subject properties include 63 Charleston County tax parcels identified by the SCDOT as Tracts 1 through 70. Tract 36 and Tract 64 were omitted. Tracts 65, 66, 68, 69, and 70 are not identified with tax map numbers.

The subject properties are located in the neck area of the Charleston Peninsula. Properties reviewed as part of this assessment includes: land parallel to Interstate-26, Spruill Avenue, and Stromboli Avenue; land for a new road to connect Interstate-26 with the proposed Marine Container Terminal at the Charleston Naval Complex and Bainbridge Avenue; and land for a new road to connect Spruill Avenue with Bainbridge Avenue. A Site Vicinity Map is included as Figure 1.

## **2. BACKGROUND AND PHASE I ESA FINDINGS**

The proposed project is a new road that will connect the proposed Marine Container Terminal at the former Charleston Naval Complex (CNC) to Interstate 26 in Charleston County, South Carolina. The road will be a new alignment with predominantly elevated structures and a new interchange at Interstate-26. The project also includes new and improved sections of surface roads in the immediate project area. The total length of the project is approximately 5 miles and includes the planned acquisition of multiple parcels of property. The project will entail the demolition of several existing structures including two highway overpasses.

According to the Phase I Environmental Site Assessment (ESA) report prepared by S&ME dated January 24, 2011, recognized environmental conditions (RECs) were identified both on-site and off-site of the subject properties. A list of the RECs is presented below.

### On-site

- Regulatory status and historical property ownership of Tract 1 and Tract 66 as part of a former phosphate fertilizer facility property.
- Regulatory status and historical property use of Tract 4, Tract 4A, Tract 4B, Tract 4C, and Tract 4D as part of the Rhodia chemical company and former phosphate fertilizer facilities.
- Regulatory status of Van Ness Sign & Leasing Site and historical property use/ownership of Tract 5 and Tract 68 by oil companies.
- Historical presence of a gasoline tank on Tract 6.

- Past operation of Southern Chemical and Professional Carpet Sales on Tract 11 and historical ownership of Tract 9, Tract 10, and Tract 11 by Southern Chemical.
- Historical land use as a machine shop since 1981 and stained soils on Tract 20.
- Previous land use as an automobile junk yard, observed mounds, and historical auto shop on Tract 22.
- Historical property use of Tract 24 as a gasoline station.
- Historical property use of Tract 25 as a hydraulic and auto repair shop since at least 1955.
- Historical property use of Tract 26 as an auto body shop from 1975 to 1990 and the historical property ownership by Atlantic Pest Control Company in 1960.
- Historical property use of Tract 28 and Tract 61 as a truck repair shop with floor drains, trough drains, oils, lubricants, parts washers, and an oil water separator.
- Regulatory status and historical property use of Tracts 29, 30, 31, 32, 33, 59, and 65 as part the Macalloy Facility, a ferrochromium alloy smelting plant.
- Regulatory status of Solid Waste Management Unit (SWMU) 9 and SWMU 196 and historical land use of Tract 34, Tract 35 and Tract 70 as a landfill on the former Navy Base and groundwater contamination exceeding the South Carolina Department of Health of Environmental Control (SCDHEC) Risk Based Screening Levels (RBSLs) associated with the underground storage tanks (USTs) previously located at Building 661.
- Historical land use of Tract 37 as the Charleston County incinerator and documented groundwater contamination.
- Historical operation of a blast pit and the spent materials from the blasting on Tract 38.
- Operation of chassis repair shop and stained soils on Tract 39.
- Operation of a stevedoring repair shop and oil water separator on Tract 43.
- The previous use of a petroleum UST on Tract 45 with no closure assessment.
- Groundwater contamination exceeding the SCDHEC RBSLs and the historical operation of the wash bay, the associated underground piping, and potential for an oil-water separator on Tract 46.
- Groundwater contamination on Tract 47 associated with the plume on Tract 46.
- An active petroleum UST release with additional assessment pending on Tract 49.
- Historical property use of Tract 57 as a gasoline station.
- Historical property use of Tract 62 as a junk yard.
- The former TriState landfill.
- Septic tanks on non-residential properties.
- The unknown source and content of fill material in marshlands.
- Historical ownership of Tract 1, Tract 66, Tract 2, Tract 3, Tracts 4, 4A, 4B, 4C, and 4D, Tract 5, Tract 23 and Tract 63 by fertilizer and chemical companies.

Offsite

- Current operations, stained soil, and underground piping associated with the ASTs on Tract 38.

- Historical use of the property on the southwest corner of the intersection of Disher Street and King Street Extension (eastern adjoining property of Tract 20) as an auto junk yard, used auto parts store and the current use as a truck repair shop.
- Previous operation of Maloney Fertilizer on the eastern/northeastern adjoining property of Tract 2 and Tract 3.
- Previous operation of a drycleaner located in the northeast corner of the intersection of Corona Street and Riverview Avenue.
- B.L. Montegue & Co., located north of Azalea Drive at its intersection with King Street Extension.
- Historical operation of a filling (retail petroleum) station, auto repair shops, and a scrap yard on the northern off-site portion of Tract 67.
- Infinger Transportation Company located approximately 800 feet from the subject property.
- Excel Apparatus Services, General Electric Company, and Besco Facility listed on the UST, FTTS, UST, RCRA-NonGen, PADS, Brownfields, and SHWS databases approximately 1000 feet from subject property.
- Phosphate plants, chemical companies, fertilizer companies, bulk oil terminals, and the former Navy Base have operated in the neck area of the Charleston Peninsula since the 1800s.

Figure 2 presents a Site Map showing the project area and each of the Charleston County tax parcels identified by the SCDOT as Tracts 1 through 70 (except Tract 36 and Tract 64, which were omitted).

### **3. ENVIRONMENTAL MEDIA ASSESSMENT PROCEDURES**

Environmental media assessment activities were conducted in an effort to assess potential environmental impacts from the recognized environmental conditions identified in the January 24, 2011 Phase I ESA. The environmental media assessed included soil, groundwater, sediment, and surface water. Assessment activities included installing soil borings, collecting soil samples from the soil borings for laboratory analysis, installing temporary monitoring wells, collecting groundwater samples from the temporary wells for laboratory analysis, and collecting surface water and sediment samples for laboratory analysis. The following sections detail our activities. We conducted environmental media assessment activities on 30 of the 68 properties, although media samples were not collected on each of the 30 properties as some of the properties were grouped together during the assessment. The property assessments are summarized below.

<b>SCDOT Tract Number</b>	<b>Site Name</b>
1 and 66	Ashley River Center Parcel 002 Property
4, 4A, 4B, 4C, and 4D	Rhodia Chemical Company Property
6	Southern Lumber
22	Former Automobile Junkyard
24	Former Sharpton's Triangle Service Center

SCDOT Tract Number	Site Name
26	Plantation Painters
28 and 61	Road 1 Truck Repair
29, 30, 31, 32, 33, 59, and 65	Macalloy
34, 35, and 70	Former Charleston Navy Base
37	Former Montenay Incinerator
40	Former Tri-State Landfill (Park South)
43	Stevedoring Repair Shop
44	Former Tri-State Landfill (Stromboli)
45	CC South Site
57	Former Retail Petroleum Station
62	Former Automobile Junkyard
67	Calvary AME Church Lot

### 3.1 Monitoring Well Approval and Navy Dig Permit

Prior to conducting the assessment activities, S&ME submitted requests to the SCDHEC and the Navy BRAC Program Management Office Southeast for approval to install temporary groundwater monitoring wells on the subject properties. SCDHEC issued Temporary Monitoring Well Approval Numbers: 4378, 4379, 4380, 4381, 4382, and 4383 dated November 7, 2011; 4422 dated December 8, 2011; 4447 dated January 24, 2012; 4471 and 4473 dated February 21, 2012; and, MW-09341 and MW-09343 dated October 1, 2013; and MW-09869 dated November 4, 2014. The Navy issued a LUC Area Construction (Dig) Permit on September 2, 2011 approving installation of monitoring wells on the former Navy Base.

Copies of the Monitoring Well Approvals and the Navy Dig Permit are enclosed in Appendix I.

### 3.2 Health and Safety Plan

S&ME prepared a Site-Specific Health and Safety Plan (HASP) in compliance with 29 CFR 1910.120 to protect S&ME employees and guide the safe operation during site activities related to the environmental media assessment.

### 3.3 Utility Locating

S&ME contacted Palmetto Utilities Protection Service (PUPS) to mark the utilities in the areas of proposed work. Additionally, S&ME used in-house locating equipment to search for underground utilities with Radio Frequency Electromagnetic Equipment (RFEM) prior to commencement of field exploration.

### **3.4 Sampling Methods**

Sampling and analytical work conducted at the property was performed in general accordance with the EPA Region IV *Field Branches Quality System and Technical Procedures* (FBQSTP) to the extent detailed in each task activity described below. Sampling equipment in direct contact with samples were constructed of glass, stainless-steel, or Teflon<sup>®</sup> and handled by an environmental technician and/or professional donning nitrile gloves. The borings were advanced using a direct push sampling rig (GeoProbe<sup>®</sup> or similar) or hand auger.

### **3.5 Analytical Laboratory and Analytical Suite**

S&ME contacted an SCDHEC-certified analytical laboratory to order the appropriate sample glassware and chain-of-custody forms for use in the field. S&ME used the analytical services of TestAmerica, Inc. located in Nashville, Tennessee (SCDHEC certification no. 84009), Knoxville, Tennessee (SCDHEC certification no. 84001), Savannah, Georgia (SCDHEC certification no. 98001001), and Richland, Washington (NELAC certification no. WA100002).

Soil, groundwater, sediment, and surface water collected from the site were analyzed for: Target Compound List (TCL) volatile organic compounds (VOCs) by SW-846 Method 8260B; TCL semivolatile organic compounds (SVOCs) by SW-846 Method 8270D; and Target Analyte List (TAL) Metals by SW-846 Methods 6010C and 7470A/7471B - water samples collected for metals analysis were analyzed for total (unfiltered) and dissolved (filtered) metals.

Based on the findings from Phase I ESA, additional parameters were added to the analytical suite for some of the SCDOT Tracts. These parameters included Dioxins/Furans by SW846 Method 8290A; Hexavalent Chromium by SW-846 Method 7196A; TCL Pesticides by SW-846 Method 8081B; TCL Polychlorinated Biphenyls (PCBs) by SW-846 Method 8082A; Radon-222 by EPA Method 913.0 Mod; and Radium-226 by EPA Method 903.1 and HASL 300.

S&ME collected sufficient sample volumes allowing the analytical laboratory to analyze Matrix Spike and Matrix Spike Duplicate samples. Trip blanks provided by the laboratory were stored with samples collected during the sampling event to determine if samples were contaminated during storage and/or shipment. A trip blank was maintained in sample coolers containing VOC samples and was analyzed for VOCs.

For each soil sample collected, an additional soil sample volume was sent to the laboratory. If the initial laboratory results indicated additional disposal characterization was needed, the additional sample volume was analyzed for specific Toxicity Characteristic Leaching Procedure (TCLP) Metals by SW-846 Extraction Method 1311 as necessary.

### **3.6 Decontamination Procedures**

Decontamination of sampling and other equipment in the field was performed to reduce the potential for cross-contamination of samples with the sampling device. Prior to initial exploration activities, drilling equipment was cleaned with high pressure hot water and allowed to dry. Stainless steel sampling equipment was cleaned with tap water and a phosphate-free laboratory detergent (using a brush if necessary to remove particulate matter and surface films); rinsed with tap water; rinsed with organic-free water; and placed on a clean foil-wrapped surface to air-dry. Cleaning was performed similarly between each boring location.

The collected liquid and solid waste was combined with other investigative-derived waste (IDW), placed in a plastic, 55-gallon drums and appropriately labeled.

### **3.7 Sampling Locations**

The boring locations for each site were recorded. S&ME differentially corrected and converted the locations to a Computer-Aided Design and Drafting (CADD) compatible format for use in mapping of locations. The assessed locations are graphically presented on Figure 3 with tabulated State Plane Coordinates of each test location shown.

### **3.8 Soil Sampling**

Based on information obtained in the Phase I ESA and site accessibility, S&ME selected locations for soil borings. The soil borings were conducted using a track-mounted direct push rig that hydraulically advanced decontaminated rods lined with new disposable tube samplers into the soil, or were conducted using a hand auger. Continuous soil samples were collected from the ground surface (or just below the surface pavement) to the termination of the borings.

We observed and screened the soil samples collected at each boring at approximately 2-foot depth intervals. The collected soil samples were described for textural characteristics and physically assessed for direct indications (stains and odors) of possible impact. A Toxic Vapor Analyzer (TVA) equipped with a flame ionization detector (FID), which can detect some volatile organic vapors, was used to screen the soils. To conduct the TVA field screening, a portion of each soil sample was placed into a new resealable plastic bag and allowed to equilibrate toward ambient temperature conditions for approximately 15 minutes. The probe of the TVA was then inserted into the head space of the bag and the maximum measurement in parts per million (ppm) was recorded.

The TVA results indicated varying concentrations of volatile organic vapors at various borings and depths. A surficial soil sample was collected at each boring location at a depth of 0-2 feet below the ground surface. A subsurface soil sample interval was collected at each boring location based on field screening and observations except where field conditions limited assessment as described in Section 4 of this report.

Soil samples were placed into laboratory-supplied sample containers. Sample containers were filled, taking care to prevent soil from remaining in the lid threads prior to being closed to prevent potential contaminant migration to or from the sample. Sample containers were closed as soon as they were filled and placed in an iced cooler. The soil samples were then shipped via overnight courier to TestAmerica Laboratories, Inc. (TA) for analysis.

A summary of the TVA screening results are on the soil boring logs which are provided in Appendix II.

### **3.9 Temporary Well Installation and Groundwater Sampling**

At the selected soil boring locations, S&ME extended the borings to varying depths to penetrate the groundwater table and install temporary monitoring wells. The temporary wells were installed by a direct push sampling rig.

The temporary wells were constructed of 4 feet of 1.0-inch diameter slotted stainless-steel screen (0.004-inch) at the bottom and 1.5-inch diameter steel casing from the top of the screen to the ground surface. The groundwater samples from each depth interval were extracted to the ground surface using new polyethylene tubing and a check valve. Any variations are described in Section 4 of this report.

A portion of each groundwater sample was collected in to new resealable plastic bags for field screening. After allowing approximately 15 minutes for potential organic vapors to emanate into the headspace of the bag, the probe of a TVA equipped with an FID was inserted into the bag and the maximum measurement in ppm was recorded. TVA readings provide a semi-quantitative indication of the presence of volatile organic vapors within a sample.

S&ME also collected a portion of each groundwater sample into laboratory supplied 40 mL vials to screen in the field using an AQR<sup>®</sup> Color-Tec instrument with PCE colorimetric tubes. The TVA and PCE screening results are presented on Table 1.

The samples were collected into laboratory-supplied containers and immediately placed on ice in a laboratory-supplied cooler. The groundwater samples were shipped via overnight courier to TA for analysis.

Following collection of the groundwater samples, the well screens were removed and the borings were abandoned with bentonite/cement grout. The wells were installed and abandoned in general accordance with the South Carolina Well Regulations and Standards (R. 61-71). A South Carolina Certified Well Driller performed the well

installation and abandonment activities. The Water Well Records (SCDHEC Form 1903) are provided in Appendix III.

The results of this assessment are required to be forwarded to the SCDHEC as a condition of the well permits that were obtained for this scope of work. As a result, this report will be submitted to the SCDHEC by S&ME pending approval by the SCDOT.

### **3.10 Sediment Sampling**

Based on information obtained in the Phase I ESA and site accessibility, S&ME selected locations for sediment sampling. S&ME collected samples from the sediment surface to an approximate depth of 0.5 foot below the sediment surface using a decontaminated stainless-steel hand auger. The sediment samples were placed into laboratory-supplied sample containers. Sample containers were filled, taking care to prevent soil from remaining in the lid threads prior to being closed to prevent potential contaminant migration to or from the sample. Samples were placed on ice in a laboratory-supplied cooler. The cooler was shipped via overnight courier to TA for analysis.

### **3.11 Surface Water Sampling**

Based on information obtained in the Phase I ESA and site accessibility, S&ME selected locations for surface water sampling. S&ME collected surface water directly into laboratory-supplied sample containers. Samples were immediately placed on ice in a laboratory-supplied cooler and shipped via overnight courier to TA for analysis.

### **3.12 Investigative-Derived Waste**

Soil cuttings generated during the assessment activities were placed in 55-gallon drums to await proper disposal. The drums were labeled according to content, sampling media, location and date generated. Drums containing IDW from assessment conducted on the former Navy Base were stored on Tract 35 near Building 661. Drums containing IDW from assessment conducted on the former Macalloy Site were stored on the SCDOT right-of-way of Talluah Road. A&D Environmental Services, Inc. (A&D) transported 19 drums on December 17, 2013 from the former Navy Base and former Macalloy Site to their facility in Archdale, North Carolina. The drums removed by A&D included IDW generated during S&ME's geotechnical assessment of the subject property. Manifests documenting disposal are provided in Appendix IV.

Drums containing IDW from assessment conducted on other areas of the site were stored on the SCDOT right-of-way under the Interstate-26 overpass of Austin Avenue. The SCDOT coordinated disposal of the drums located under Interstate-26 with ARM Environmental Services, Inc.

One drum of IDW, generated during assessment at Solvay, is currently stored on the SCDOT right-of-way under the Interstate-26 overpass of Austin Avenue. S&ME will arrange for appropriate disposal of the drum at the SCDOT's request.

#### **4. SITE BACKGROUNDS AND ASSESSMENT RESULTS**

The assessment results for soil, groundwater, sediment, and surface water sampling are detailed in the following sections.

We compared the soil sample analytical results to screening values for soil listed the USEPA's Regional Screening Levels for Chemical Contaminants at Superfund Sites table dated January 2015 (SL Table) as detailed below. The SL Summary Table contains various risk-based concentrations derived from standardized equations combining exposure information assumptions with EPA toxicity data for many different contaminants including some of those detected as part of this assessment. If a contaminant is not listed, then insufficient data exist to develop a screening value and/or the contaminant is not considered sufficiently toxic to warrant a screening value.

The screening values for soil listed below are for comparison purposes only; they are not enforceable by the USEPA or the SCDHEC and are not considered cleanup standards. However, the SCDHEC routinely considers the screening values for soil for initial evaluation of contaminant concentrations.

The specific USEPA screening values for soil to which the analytical results were compared included the:

- industrial screening levels (ISLs) for exposure to soil through ingestion, inhalation of particulates, and dermal contact;
- residential screening levels (RSLs) for exposure to soil through ingestion, inhalation of particulates, and dermal contact; and,
- soil screening levels for potential contaminant migration from soil to groundwater based on EPA maximum contaminant levels for drinking water (SSL-MCLs) or, if no MCL is listed for the parameter, soil screening levels for potential contaminant migration from soil to groundwater based on the risk-based screening levels for tapwater (SSL-Tap). The SSL-MCL and SSL-Tap are calculated using a dilution attenuation factor (DAF) of 1.

The RSLs and ISLs used for comparison are based on Target Cancer Risk of 1E-06 and a Target Non-Cancer Hazard Quotient of 1.

We compared the soil sample analytical results for metals to published background levels of inorganic elements found in South Carolina soils. According to data presented in *Elements in South Carolina Inferred Background Soil and Stream Sediment Samples*

(Canova 1999) South Carolina Geology, the average and range for arsenic in South Carolina soil is 6.1 mg/kg and 0.23 mg/kg – 210 mg/kg, respectively. Also, according to data presented in *Elemental Concentrations in Soils of South Carolina* (Franklin *et al.* 2003) Soil Science, the geometric mean and range for arsenic in South Carolina surface soil is 2.5 mg/kg and <2.8 mg/kg – 10 mg/kg, respectively.

We compared the groundwater sample analytical results to the maximum contaminant levels (MCLs) for drinking water set forth in the South Carolina Primary Drinking Water Regulations, R.61-58. If no MCL is listed for the parameter, we compared the groundwater sample analytical results to the USEPA screening levels for tap water (TWSLs) listed in the SL Table.

The MCLs are SCDHEC-enforced standards for drinking water. Per the SCDHEC Water Classifications & Standards, R.61-68, South Carolina groundwater must meet the MCLs. The other screening values (TWSLs) are for comparison purposes only.

A parameter's exceedance of the SSL-MCL/Taps in a soil sample indicates the potential for that parameter to leach from soil to groundwater such that the concentration of that parameter in groundwater exceeds the applicable MCL or TWSL. Discussions of soil to groundwater pathway are discussed below.

We compared the sediment sample analytical results to the same screening values as the soil sample results (RSLs, ISLs, SSL-MCLs, and SSL-Taps, as described above) as well as the Sediment Screening Values (SSV) for Hazardous Waste Sites (Table 3) obtained from the USEPA Supplemental Guidance to RAGS: Region 4 Bulletins, Ecological Risk Assessment updated November 30, 2001.

According to data presented in *Elements in South Carolina Inferred Background Soil and Stream Sediment Samples* (Canova 1999) South Carolina Geology, the average and range of metals in South Carolina sediment are:

- arsenic - average of 1.5 mg/kg and range of 0.26 mg/kg – 16 mg/kg;
- cadmium - average of 0.8 mg/kg and range of 0.13 mg/kg – 10 mg/kg;
- chromium - average of 11 mg/kg and range of 1 mg/kg – 47 mg/kg;
- copper - average of 6 mg/kg and range of 0.64 mg/kg – 30 mg/kg;
- lead - average of 11 mg/kg and range of 0.57 mg/kg – 76 mg/kg;
- mercury - average of 0.15 mg/kg and range of 0.025 mg/kg – 0.25 mg/kg;
- nickel - average of 5 mg/kg and range of 1.5 mg/kg – 51; and,
- zinc - average of 23 mg/kg and range of 1.0 mg/kg – 200 mg/kg.

We compared the surface water sample analytical results to the same screening values as the groundwater sample results (MCLs and TWSL, as described above) as well as the Water Quality Numeric Criteria (WQNC) for the Protection of Aquatic Life and Human

Health based on consumption of Water and Organisms and Organisms Only values in the SC Water Classifications and Standards, R.61-68 dated June 22, 2012.

For samples which were analyzed for dioxins/furans, we calculated the Total Toxic Equivalent (TEQ) by multiplying the detected concentrations of 17 individual dioxins/furans (or the laboratory estimated detection levels (EDLs), if the parameter was not detected) by the toxic equivalency factor (TEF) and summing the results. We used the World Health Organization (WHO) 2005 TEFs. We compared the calculated Total Dioxin/Furan TEQs to the screening levels for the individual dioxin 2,3,7,8-TCDD.

We compared Radium-226 soil results to surface and subsurface soil screening levels obtained from Subpart B of 40 CFR Part 192. The concentration criterion for surface soil (5 pCi/g of Radium-226) is a health-based standard. The concentration criterion for subsurface soil (15 pCi/g of Radium-226) is not a health-based standard, but rather was developed for use in limited circumstances to determine when buried tailings had been detected.

We compared the Radium-226 groundwater sample analytical results to the combined Radium-226 and Radium-228 MCL for drinking water set forth in the South Carolina Primary Drinking Water Regulations, R.61-58.

We compared the Radon-222 groundwater analytical results to the USEPA proposed level (4,000 pCi/L) for community water suppliers (water systems that serve 25 or more year round residents) in states that develop EPA-approved, enhanced State radon in indoor air programs (called Multimedia Mitigation Programs). Under the proposed regulation, community water systems in States that choose not to develop enhanced indoor air programs will be required to reduce radon levels in drinking water to 300 pCi/L. The USEPA does not regulate private wells. There is no federally-enforced drinking water standard for Radon.

We compared the TCLP sample results to Table 1 – Maximum Concentration of Contaminants for the Toxicity Characteristic listed in 40 CFR 261.24 dated July 1, 2011.

The analytical results indicated that the MDLs for some parameters were greater than certain screening values. The analytical laboratory (TA) is certified by SCDHEC and the MDLs are consistent with industry standards. Some of the risk-based screening values are derived from mathematical equations and are below what current analytical methods can detect. Therefore, based on the absence of detections for tested parameters at concentrations greater than industry standards acceptable to SCDHEC, additional assessment of the parameters reported as non-detect but having MDLs exceeding screening values in the soil and groundwater is not warranted.

Sample locations are presented on Figure 3. Analytical results are summarized on Tables 2 through 29. Laboratory reports are included as Appendix V.

Based on the planned non-residential use of the site, analytical parameters detected in soil samples at concentrations exceeding the ISLs and in groundwater samples at concentrations exceeding MCLs are included in the conclusion sections below. Refer to the discussion sections and Tables 2 through 29 for comparison of soil sample analytical results to additional screening levels.

## **4.1 Tract 1 and Tract 66 – Ashley River Center Parcel 002 Property**

### **4.1.1 Site Background**

Tract 1 and Tract 66, known as the Ashley River Center Parcel 002 Property, (Charleston County TMS # 469-00-00-002) was historically owned by chemical and oil companies. The property owner representative indicated worker housing for the Virginia Carolina fertilizer plant was previously on or near Tract 1. Phosphate fertilizer manufacturing occurred along the Ashley River near Tract 1 beginning in the late 1800s.

Widening of Interstate 26 to accommodate for the new Port Access Road will require additional right-of-way from Tract 1 and Tract 66. Based on the historical use of the property by former chemical and oil companies, the site soil and groundwater was analyzed for VOC, SVOC, and TAL Metals.

Surficial and subsurface soil samples were collected from two borings (Tract 1 SB-1 and Tract 1 SB-2) for laboratory analysis. The subsurface soil sample interval was selected based on the field screening results. Temporary monitoring wells were installed at three depth intervals in each boring location. Based on field screening results and lithological observations, groundwater samples were collected for laboratory analysis from two temporary monitoring wells (Tract 1 TW-1 (54-60) and Tract 1 TW-2 (26-30)).

### **4.1.2 Soil Results**

#### Tract 1 SB-1 (0-2):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 15 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron, lead, and manganese concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.

#### Tract 1 SB-1 (36-40):

- One VOC (acetone) was detected at a concentration greater than the MDL but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 17 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Aluminum,

cobalt, iron, lead, and manganese concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.

Tract 1 SB-2 (0-2):

- Three VOCs (acetone, benzene, and toluene) were detected at concentrations greater than the MDLs. Benzene concentration exceeded the SSL-MCL. Acetone and toluene were detected at concentrations less than applicable screening values.
- Nine SVOCs were detected at concentrations greater than the MDLs. Benzo(a)anthracene concentration exceeded the SSL-Tap. Benzo(a)pyrene concentration exceeded the RSL. Benzo(b)fluoranthene concentration exceeded the RSL and SSL-Tap. Other detected SVOCs (benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, and pyrene) concentrations were less than applicable screening values.
- 18 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cobalt, iron, lead, manganese, mercury, and selenium concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.

Tract 1 SB-2 (50-54):

- One VOC (acetone) was detected at a concentration greater than the MDL but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 18 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Aluminum, cobalt, iron, lead, manganese, and selenium concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.

#### 4.1.3 Groundwater Results

Tract 1 TW-1 (54-60):

- One VOC (toluene) was detected at a concentration greater than the MDL but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 13 of the 23 TAL Metals were detected at concentrations greater than the MDLs but less than applicable screening levels.

Tract 1 TW-2 (26-30):

- One VOC (toluene) was detected at a concentration greater than the MDL but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 17 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic and total lead concentrations exceeded the MCLs. Total iron and total manganese concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening values.

#### 4.1.4 Discussion

Two surficial soil samples, two subsurface soil samples, and two groundwater samples were collected on Tract 1. Samples were analyzed for VOC, SVOC, and TAL Metals.

One VOC (benzene) was detected in one surficial soil at a concentration exceeding SSL-MCL. Three SVOCs (benzo(a)anthracene, benzo(a)pyrene, and benzo (b)fluoranthene) were detected in one surficial soil at concentrations exceeding RSLs and/or SSL-Taps. Arsenic was detected in each of the collected soil samples at concentrations exceeding the ISL, RSL, and SSL-MCL. Other metals (aluminum, cobalt, iron, lead, manganese, mercury, and selenium) were detected in one or more of the soil samples at concentrations exceeding the SSL-MCL/Taps.

No VOCs or SVOCs were detected in the collected groundwater samples at concentration exceeding screening levels. Two metals (arsenic and lead) were detected in one groundwater sample at concentrations exceeding the MCLs. Iron and manganese were detected in one groundwater sample at a concentration exceeding the TWSLs. Arsenic, iron, manganese, and lead were not detected at concentrations exceeding screening levels in the corresponding laboratory filtered groundwater sample.

#### 4.1.5 Conclusions

Arsenic was present in soil samples at concentrations exceeding ISLs. The detected arsenic concentrations were consistent with background concentrations in South Carolina.

Based on the groundwater results for benzene and benzo(a)pyrene and the filtered groundwater results for aluminum, cobalt, iron, lead, manganese, mercury, and selenium, it does not appear these parameters which were detected in the soil at concentrations exceeding the SSL-MCL/Taps have impacted site groundwater.

Arsenic and lead were present in one groundwater sample at concentrations exceeding MCLs; however, arsenic and lead concentrations were less than the MCLs in the filtered groundwater sample.

## 4.2 Tract 4, Tract 4A, Tract 4B, Tract 4C, and Tract 4D – Rhodia Chemical Company Property

### 4.2.1 Site Background

Tract 4, Tract 4A, Tract 4B, Tract 4C, and Tract 4D, known as the Rhodia Chemical Company Property, (Charleston County TMS # 466-00-00-011) was historically owned by chemical and oil companies including Virginia-Chemical Corporation, Socony Mobil Oil Company, Inc., Mobil Oil Corporation, and Albright and Wilson, Inc. The Rhodia facility was identified in the EDR Report at the time of the Phase I ESA on the GWCI, LUST, UST, RCR, and SPILLS databases. Mobile Chemical Company, a previous

owner of the property, was identified in the EDR Report at the time of the Phase I ESA on the GWCI, CORRACTS, AIRS, CERC-NFRAP, SHWS, SSTS, RCRA-LQG, TRIS, and RCRA-TSDF databases. The property owner representative indicated the site has been under investigation for over a decade under a RCRA permit and there is a gypsum pile located in the area of the proposed right-of-way.

Widening of Interstate 26 to accommodate for the new Port Access Road will require additional right-of-way from Tract 4, Tract 4A, Tract 4B, Tract 4C, and Tract 4D. Based on the historical use of the property by former chemical and oil companies, the site soil and groundwater was analyzed for VOC, SVOC, TAL Metals, PCBs, pesticides, and the radionuclide Radium-226. Site groundwater was also analyzed for Radon 222.

Surficial and subsurface soil samples were collected from six borings (Tract 4 SB-1, Tract 4 SB-2, Tract 4A SB-1, Tract 4B SB-1, Tract 4C SB-1, and Tract 4D SB-1) for laboratory analysis. The subsurface soil sample interval was selected based on the field screening results. Temporary monitoring wells were installed at two or three depth intervals based on lithological observations in borings Tract 4 SB-1, Tract 4 SB-2, Tract 4A SB-1, Tract 4B SB-1, and Tract 4C SB-1. A temporary monitoring well was not installed and a groundwater sample was not collected from Tract 4D based on site limitations. Based on field screening results, groundwater samples were collected for laboratory analysis from five temporary monitoring wells (Tract 4 TW-1 (8-12), Tract 4 TW-2 (4-14), Tract 4A TW-1 (8-12), Tract 4B TW-1 (6-10), and Tract 4C TW-1 (3-13)). New disposable 10-foot PVC well screens were installed to facilitate groundwater sampling from monitoring wells Tract 4 TW-2 and Tract 4C TW-1 because of slow recharge. We were unable to collect adequate sample volume from Tract 4B TW-1 (6-10) for laboratory analysis of filtered TAL Metals.

#### 4.2.2 Soil Results

##### Tract 4 SB-1 (0-4):

- Sample interval was gypsum, not soil. Gypsum was not analyzed for VOCs, SVOCs, TAL Metals, PCBs, or Pesticides.
- Radium-226 was detected at a concentration greater than the surficial soil screening level.

##### Tract 4 SB-1 (4-8):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 18 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cadmium, iron, lead, and selenium concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Radium-226 was detected at a concentration greater than the MDL but less than the subsurface soil screening level.

Tract 4 SB-2 (0-2):

- One VOC (methylene chloride) was detected at a concentration greater than the MDL at a concentration that exceeded the SSL-MCL.
- No SVOCs were detected at concentrations greater than the MDLs.
- 18 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cobalt, iron, and manganese concentrations exceeded the SSL-Tap. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Radium-226 was detected at a concentration greater than the MDL but less than the surface soil screening level.

Tract 4 SB-2 (40-44):

- Three VOCs (acetone, 2-butanone, and carbon disulfide) were detected at a concentration greater than the MDL but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 14 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the RSL and SSL-MCL. Barium, cobalt, iron, lead, and manganese concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Radium-226 was detected at a concentration greater than the MDL but less than the subsurface soil screening level.

Tract 4A SB-1 (0-2):

- Three VOCs (acetone, benzene, and methylene chloride) were detected at concentrations greater than the MDLs. Methylene chloride concentration exceeded the SSL-MCL. Other detected VOC concentrations were less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 19 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cobalt, iron, and manganese concentrations exceeded the SSL-Tap. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Radium-226 was detected at a concentration greater than the MDL but less than the surface soil screening level.

Tract 4A SB-1 (32-36):

- Four VOCs (acetone, 2-butanone, carbon disulfide, and methylene chloride) were detected at a concentration greater than the MDLs. Methylene chloride

concentration exceeded the SSL-MCL. Other detected VOC concentrations were less than applicable screening levels.

- No SVOCs were detected at concentrations greater than the MDLs.
- 14 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cadmium, iron, lead, and manganese concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Radium-226 was detected at a concentration greater than the MDL but less than the subsurface soil screening level.

Tract 4B SB-1 (1-3):

- Gravel encountered to a depth of 1 foot below the ground surface. Surficial soil sample collected from 1-3 feet below the ground surface.
- No VOCs were detected at concentrations greater than the MDLs.
- One SVOC (bis(2-ethylhexyl)phthalate) was detected at concentrations greater than the MDL but less than applicable screening levels.
- 14 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the RSL and SSL-MCL. Iron concentration exceeded the SSL-Tap. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Radium-226 was detected at a concentration greater than the MDL but less than the surface soil screening level.

Tract 4B SB-1 (18-22):

- Four VOCs (acetone, benzene, 2-butanone, and carbon disulfide) were detected at a concentration greater than the MDL but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 19 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cobalt, iron, lead, manganese, selenium, and silver concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Radium-226 was detected at a concentration greater than the MDL but less than the subsurface soil screening level.

Tract 4C SB-1 (0-2):

- One VOC (2-butanone) was detected at a concentration greater than the MDLs but less than applicable screening values.
- One SVOC (bis(2-ethylhexyl)phthalate) was detected at concentrations greater than the MDL but less than applicable screening levels.

- 13 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron and manganese concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Radium-226 was detected at a concentration greater than the MDL but less than the surface soil screening level.

Tract 4C SB-1 (42-46):

- Three VOCs (acetone, 2-butanone, and carbon disulfide) were detected at a concentration greater than the MDL but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 15 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cobalt, iron, lead, and manganese concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Radium-226 was detected at a concentration greater than the MDL but less than the subsurface soil screening level.

Tract 4D SB-1 (0-2):

- One VOC (methylene chloride) was detected at a concentration greater than the MDLs at a concentration that exceeded the SSL-MCL.
- Three SVOCs (benzo(b)fluoranthene, bis(2-ethylhexyl)phthalate, and phenol) were detected at concentrations greater than the MDLs but less than applicable screening values.
- 19 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Antimony, cadmium, iron, lead, and manganese concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Radium-226 was detected at a concentration greater than the surficial soil screening level.

Tract 4D SB-1 (6-10):

- One VOC (methylene chloride) was detected at a concentration greater than the MDL at a concentration that exceeded the SSL-MCL.
- One SVOC (bis(2-ethylhexyl)phthalate) was detected at a concentration greater than the MDL but less than applicable screening levels.
- 8 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Iron concentration exceeded the SSL-Tap. Other detected metal concentrations were less than applicable screening values.

- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Radium-226 was detected at a concentration greater than the MDL but less than the subsurface soil screening level.

#### 4.2.3 Groundwater Results

##### Tract 4 TW-1 (8-12):

- No VOCs were detected at concentrations greater than the MDLs.
- One SVOC (bis(2-ethylhexyl)phthalate) was detected at a concentration greater than the MDL but less than applicable screening level.
- 18 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total and dissolved arsenic, total beryllium, total chromium, and total lead concentrations exceed the MCLs. Total aluminum, total cobalt, total and dissolved iron, total and dissolved manganese, and total vanadium concentrations exceed the TWSLs. Other detected metal concentrations were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Radon-222 was detected at a concentration greater than the MDL but less than the screening level.
- Radium-226 was detected at a concentration greater than the MDL but less than screening level.

##### Tract 4 TW-2 (4-14):

- No VOCs were detected at concentrations greater than the MDLs.
- One SVOC (diethyl phthalate) was detected at a concentration greater than the MDL but less than the applicable screening level.
- 16 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic and total lead concentrations exceeded the MCLs. Total aluminum, total cobalt, total iron, and dissolved manganese concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Radon-222 was detected at a concentration greater than the MDL but less than the screening level.
- Radium-226 was detected at a concentration exceeding the MCL.

##### Tract 4A TW-1 (8-12):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 9 of the 23 TAL Metals were detected at concentrations greater than the MDLs but less than applicable screening values.

- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Radon-222 was detected at a concentration greater than the MDL but less than the screening level.
- Radium-226 was detected at a concentration greater than the MDL but less than the screening level.

Tract 4B TW-1 (6-10):

- One VOC (acetone) was detected at concentration greater than the MDL but less than the applicable screening value.
- Five SVOCs (acenaphthene, dibenzofuran, bis(2-ethylhexyl)phthalate, fluoranthene, and fluorene) were detected at a concentration greater than the MDLs. Bis(2-ethylhexyl)phthalate concentration exceeded the MCL. Other detected SVOC concentrations were less than applicable screening levels.
- 12 of the 23 TAL Metals were detected at concentrations greater than the MDLs but less than the applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- One pesticide (gamma-chlordane) was detected at a concentration greater than the MDL. No screening levels have been established for the established for the pesticide.
- Radon-222 was detected at a concentration greater than the MDL but less than the screening level.
- Radium-226 was detected at a concentration greater than the MDL but less than screening level.

Tract 4C TW-1 (3-13):

- One VOC (acetone) was detected at concentration greater than the MDL but less than the applicable screening value.
- One SVOC (diethyl phthalate) was detected at a concentration greater than the MDL but less than applicable screening level.
- 12 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total lead concentration exceeded the MCL. Other detected metal concentrations were less than the applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Radon-222 was detected at a concentration greater than the MDL but less than the screening level.
- Radium-226 was detected at a concentration greater the MCL.

#### 4.2.4 Discussion

Five surficial soil samples, six subsurface soil samples, and five groundwater samples were collected from Tract 4, Tract 4A, Tract 4B, Tract 4C, and Tract 4D. Samples were analyzed for VOC, SVOC, TAL Metals, PCBs, pesticides, and Radium-226. Site

groundwater was also analyzed for Radon-222. One gypsum sample was collected from the surficial interval from Tract 4 and analyzed for Radium-226.

One VOC (methylene chloride) was detected in three surficial soil and two subsurface soil samples at concentrations exceeding the SSL-MCL. Arsenic was detected in four surficial soil and four subsurface soil samples at concentrations exceeding the ISL, RSL, and SSL-MCL. Arsenic was detected in one surface and one subsurface soil samples at concentrations exceeding the RSL and SSL-MCL. Other metals (antimony, barium, cadmium, cobalt, iron, lead, manganese, selenium, and silver) were detected in one or more of the soil samples at concentrations exceeding the SSL-MCL/Taps.

Radium-226 was detected at a concentration greater than the surficial soil screening level in the gypsum sample and one surficial soil sample. No SVOCs, PCBs, or pesticides were detected in the collected soil samples at concentrations exceeding screening levels.

One SVOC (bis(2-ethylhexyl)phthalate) was detected in one groundwater sample at a concentration exceeding the MCL. One metal (arsenic) was detected in two groundwater samples at concentrations exceeding the MCL. One metal (lead) was detected in three groundwater samples at concentrations exceeding the MCL. Two metals (beryllium and chromium) were detected in one groundwater sample at concentrations exceeding the MCLs. Arsenic was detected at a concentration exceeding the MCL in one the corresponding laboratory filtered groundwater samples.

Aluminum, cobalt, iron, and manganese were detected in two groundwater samples at concentrations exceeding the TWSLs. Vanadium was detected in one groundwater sample at concentration exceeding the TWSL. Iron was detected at a concentration exceeding the TWSL in one the corresponding laboratory filtered groundwater samples. Manganese was detected in two filtered groundwater samples at concentrations exceeding the TWSL.

Radium-226 was detected in two groundwater samples at concentrations exceeding the MCL. No VOCs, PCBs, pesticides, or Radon 222 were detected in the collected groundwater samples at concentration exceeding screening levels.

#### 4.2.5 Conclusions

Arsenic was present in soil samples at concentrations exceeding ISLs. The detected arsenic concentrations were consistent with background concentrations in South Carolina.

Radium-226 was detected at a concentration greater than the surficial soil screening level in the gypsum sample and one surficial soil sample.

Based on the groundwater results for methylene chloride and the filtered groundwater results for antimony, barium, cadmium, cobalt, lead, selenium, and silver, it does not appear these parameters which were detected in the soil at concentrations exceeding the SSL-MCL/Taps have impacted site groundwater.

Iron and manganese were detected in soil samples at concentrations exceeding the SSL-Tap and in filtered groundwater samples at concentrations exceeding the TWSL. MCLs are not established for iron or manganese.

One VOC (bis(2-ethylhexyl)phthalate) was detected in one groundwater sample at a concentration exceeding the MCL. Radium-226 was detected in two groundwater samples at concentrations exceeding the MCL.

One metal (arsenic) was detected in two groundwater samples at concentrations exceeding the MCL. Arsenic was detected at a concentration exceeding the MCL in one of the corresponding laboratory filtered groundwater samples.

One metal (lead) was detected in three groundwater samples at concentrations exceeding the MCL. Two metals (beryllium and chromium) were detected in one groundwater sample at concentrations exceeding the MCLs. However, beryllium, chromium, and lead concentrations were less than the MCLs in the filtered groundwater samples.

### **4.3 Tract 6 – Southern Lumber**

#### **4.3.1 Site Background**

Tract 6 (Charleston County TMS # 466-16-00-099) is currently used by Southern Lumber and Millwork for office space, retail space, millworking, and lumber storage. During the Phase I ESA, observations on the property included two ASTs labeled to contain diesel fuel, a parts washer, and small quantities of oils, fuel, and lubricants. We were unable to confirm if wood treatment occurred on the property.

Widening of Interstate 26 to accommodate for the new Port Access Road will require right-of-way from Tract 6. Based on the historical use of the property by Southern Lumber, the site soil and groundwater was analyzed for VOC, SVOC, TAL Metals, PCBs, and pesticides. Based on initial analytical results, Tract 6 SB-1 (0-2) soil sample was also analyzed for TCLP metals, Tract 6 SB-1 (10-14) was also analyzed for TCLP arsenic, and Tract 6 SB-2 (0-2) soil sample was also analyzed for and TCLP chlordane.

Surficial and subsurface soil samples were collected from two borings (Tract 6 SB-1 and Tract 6 SB-2) for laboratory analysis. The subsurface interval was selected based on the field screening results. Temporary monitoring wells were installed at two depth intervals in each boring location. The shallow temporary well Tract 6 TW-2 (7-11) did not produce enough water for sampling. Based on field screening results and field

conditions, groundwater samples were collected for laboratory analysis from two temporary monitoring wells (Tract 6 TW-1 (8-12) and Tract 6 TW-2 (54-58)).

#### 4.3.2 Soil Results

##### Tract 6 SB-1 (0-2):

- Six VOCs (2-butanone, acetone, ethylbenzene, methylene chloride, toluene, and xylenes) were detected at concentrations greater than the MDLs. One VOC (methylene chloride) concentration exceeded the SSL-MCL. Other detected VOC concentrations were less than applicable screening values.
- 15 SVOCs were detected at concentrations greater than the MDLs. Benzo(a)anthracene, benzo(b)fluoranthene, and indeno(1,2,3-cd)pyrene concentrations exceeded the RSLs and SSL-Taps. Benzo(a)pyrene concentration exceeded the RSL. Other detected SVOCs (acenaphthylene, anthracene, benzo(g,h,i)perylene, benzo(k)fluoranthene, bis(2-ethylhexyl)phthalate, carbazole, chrysene, dibenz(a,h)anthracene, fluoranthene, phenanthrene, and pyrene) concentrations were less than applicable screening values.
- 19 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cobalt, iron, lead, manganese, and mercury concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Three TCLP Metals (barium, lead, and selenium) were detected at concentrations less than the TCLP regulatory levels. Other analyzed TCLP Metals were less than the MDLs.

##### Tract 6 SB-1 (10-14):

- One VOC (xylenes) was detected at a concentration greater than the MDL but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 16 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron concentration exceeded the RSL and SSL-Tap. Lead, manganese, and mercury concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- TCLP arsenic was not detected at a concentration greater than the MDL.

##### Tract 6 SB-2 (0-2):

- Seven VOCs (2-butanone, acetone, benzene, carbon disulfide, ethylbenzene, toluene, and xylenes) were detected at concentrations greater than the MDLs but less than applicable screening values.
- Two SVOC (bis(2-ethylhexyl)phthalate and fluoranthene) were detected at concentrations greater than the MDLs but less than applicable screening values.

- 18 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cobalt, copper, iron, lead, and manganese concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- Five pesticides were detected at concentrations greater than the MDLs. Heptachlor epoxide concentration exceeded the RSL and SSL-MCL. Chlordane and heptachlor concentrations exceeded the SSL-MCL. Other detected pesticide concentrations (alpha-chlordane and gamma-chlordane) were less than applicable screening values.
- TCLP chlordane was not detected at a concentration greater than the MDL.

Tract 6 SB-2 (10-14):

- Two VOCs (2-butanone and acetone) were detected at concentrations greater than the MDL but less than applicable screening values.
- One SVOC (bis(2-ethylhexyl)phthalate) was detected at a concentration greater than the MDL but less than applicable screening values.
- 17 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cobalt and iron concentrations exceeded the SSL-Taps. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

#### 4.3.3 Groundwater Results

Tract 6 TW-1 (8-12):

- One VOC (carbon disulfide) was detected at a concentration greater than the MDL but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 17 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic, total chromium, total lead, and dissolved thallium concentrations exceeded the MCLs. Total aluminum, total cobalt, total iron, and total vanadium concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 6 TW-2 (54-58):

- Two VOCs (carbon disulfide and toluene) were detected at concentrations greater than the MDLs but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 19 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic, total beryllium, total cadmium, total chromium, and total lead concentrations exceeded the MCLs. Total aluminum, total cobalt, total iron, total

manganese, and total vanadium concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening values.

- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

#### 4.3.4 Discussion

Two surficial soil samples, two subsurface soil samples, and two groundwater samples were collected on Tract 6. Samples were analyzed for VOC, SVOC, TAL Metals, PCBs, and pesticides. Based on initial analytical results, one surficial soil sample was also analyzed for TCLP metals, one subsurface soil sample was also analyzed for TCLP arsenic, and one surficial soil sample was also analyzed for and TCLP chlordane.

One VOC (methylene chloride) was detected in one surficial soil at a concentration exceeding SSL-MCL. One SVOC (benzo(a)pyrene) was detected in one surficial soil sample at a concentration exceeding the RSL. Three SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, and indeno(1,2,3-cd)pyrene) were detected in one surficial soil at concentrations exceeding RSLs and SSL-Taps. Arsenic was detected in each of the collected soil samples at concentrations exceeding the ISL. Iron was detected in one subsurface soil sample at a concentration exceeding the RSL. Other metals (cobalt, copper, iron, lead, manganese, and mercury) were detected in one or more of the soil samples at concentrations exceeding the SSL-MCL/Taps. Heptachlor epoxide was detected in one surficial soil sample at a concentration exceeding the RSL and SSL-MCL. Chlordane and heptachlor were detected in one surficial soil sample at concentrations exceeding the SSL-MCLs. No PCBs or TCLP analytes were detected at concentrations exceeding screening values.

No VOCs, SVOCs, pesticides, or PCBs were detected in the collected groundwater samples at concentration exceeding screening levels. Five total metals (arsenic, beryllium, cadmium, chromium, and lead) were detected in one or both groundwater sample(s) at concentrations exceeding the MCLs. One filtered groundwater sample contained dissolved thallium at a concentration exceeding the MCL.

Four total metals (aluminum, cobalt, iron, manganese, and vanadium) were detected in one or both groundwater sample(s) at concentrations exceeding the TWSL.

#### 4.3.5 Conclusions

Arsenic was present in soil samples at concentrations exceeding ISLs. The detected arsenic concentrations were consistent with background concentrations in South Carolina.

Based on the groundwater results for methylene chloride, benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluoranthene, indeno(1,2,3-cd)pyrene, chlordane,

heptachlor, and heptachlor epoxide and the filtered groundwater arsenic, cobalt, copper, iron, lead, manganese, and mercury, it does not appear these parameters which were detected in the soil at concentrations exceeding the SSL-MCL/Taps have impacted site groundwater.

Five metals (arsenic, beryllium, cadmium, chromium, and lead) were present in one or both groundwater samples at concentrations exceeding MCLs; however, concentrations of each were less than the MCLs in the filtered groundwater sample. One metal (thallium) was detected in one filtered groundwater sample at a concentration exceeding the MCL.

#### **4.4 Tract 22 – Former Automobile Junkyard**

##### **4.4.1 Site Background**

Tract 22 (Charleston County TMS # 466-16-00-124) was previously used as a junkyard. What appeared to be soil and asphalt mounds were observed during the Phase I ESA site reconnaissance. The 1955 Sanborn Map indicated there may have been an auto shop on or near Tract 22.

Access from Interstate 26 to the new port will require right-of-way from Tract 22. Based on the historical use of the property, the site soil and groundwater was analyzed for VOC, SVOC, and TAL Metals. Based on initial analytical results, Tract 22 SB-1 (0-2) soil sample was also analyzed for TCLP lead.

Surficial and subsurface soil samples were collected from one boring (Tract 22 SB-1) for laboratory analysis. The subsurface soil sample interval was selected based on the field screening results. Temporary monitoring wells were installed at four depth intervals in the boring. Based on field screening results, a groundwater sample was collected for laboratory analysis from one temporary monitoring well (Tract 22 TW-1 (16-20)).

##### **4.4.2 Soil Results**

###### Tract 22 SB-1 (0-2):

- Two VOCs were detected at concentrations greater than the MDLs. Methyl tert-Butyl Ether (MTBE) concentration exceeded the SSL-Tap. Acetone concentration was less than applicable screening levels.
- Nine SVOCs were detected at concentrations greater than the MDLs. Benzo(a)pyrene concentration exceeded the RSL. Benzo(b)fluoranthene, 2-methylnaphthalene, and naphthalene concentrations exceeded the SSL-Taps. Other detected SVOC (benzo(g,h,i)perylene, benzo(k)fluoranthene, bis(2-ethylhexyl)phthalate, fluoranthene, and pyrene) concentrations were less than the applicable screening levels.
- 16 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Barium, cobalt, copper, iron, lead, manganese, and mercury concentrations exceed the SSL-

MCL/Taps. Other detected metal concentrations were less than the applicable screening levels.

- TCLP lead concentration was the less than the regulatory level.

Tract 22 SB-1 (4-8):

- Two VOCs were detected at concentrations greater than the MDLs. MTBE concentration exceeded the SSL-Tap. Acetone concentration was less than applicable screening values.
- One SVOC (fluoranthene) was detected at a concentration greater than the MDL but less than applicable screening values.
- 14 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron, lead, and manganese concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.

#### 4.4.3 Groundwater Results

Tract 22 TW-1 (16-20):

- Three VOCs (bromoform, MTBE, and toluene) were detected at concentrations greater than the MDLs but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 17 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic, total cadmium, total chromium, and total lead concentrations exceeded the MCLs. Total aluminum, total iron, total manganese, and total vanadium concentrations exceeded TWSLs. Other detected metal concentrations were less than applicable screening levels.

#### 4.4.4 Discussion

One surficial soil sample, one subsurface soil sample, and one groundwater sample were collected on Tract 22. Samples were analyzed for VOC, SVOC, and TAL Metals. Based on initial analytical results, the surficial soil sample was also analyzed for TCLP lead.

One VOC (MTBE) was detected in both the surficial and subsurface soil sample at concentrations exceeding the SSL-Tap. Four SVOCs (benzo(a)pyrene, benzo(b)fluoranthene, 2-methylnaphthalene, and naphthalene) were detected in the surficial soil sample at concentrations exceeding the RSL or SSL-Tap. Arsenic was detected in each of the collected soil samples at concentrations exceeding the ISL. Other metals (barium, cobalt, copper, iron, lead, manganese, and mercury) were detected in one or both of the soil samples at concentrations exceeding the SSL-MCL/Taps. TCLP lead was not detected at a concentration exceeding the screening level.

No VOCs or SVOCs were detected in the groundwater sample at concentrations exceeding screening levels. Four metals (arsenic, cadmium, chromium, and lead) were

detected in the groundwater sample at concentrations exceeding the MCLs. Four metals (aluminum, iron, manganese, and vanadium) were detected at concentrations exceeding TWSLs. Metals were not detected at concentrations exceeding screening levels in the laboratory filtered groundwater sample.

#### 4.4.5 Conclusions

Arsenic was present in soil samples at concentrations exceeding ISLs. The detected arsenic concentrations were consistent with background concentrations in South Carolina.

Based on the filtered groundwater results, it does not appear the parameters which were detected in the soil at concentrations exceeding the SSL-MCL/Taps have impacted site groundwater.

Four metals (arsenic, cadmium, chromium, and lead) were present in the groundwater sample at a concentration exceeding MCLs; however, concentrations of each were less than the MCLs in the filtered groundwater sample.

### 4.5 Tract 24 – Former Sharpton’s Triangle Service Center

#### 4.5.1 Site Background

Tract 24 (Charleston County TMS # 466-16-00-076) was previously used as a retail petroleum station. City directories listed Sharpton’s Triangle Service Center on the property from 1968 to 1980. A filling (retail petroleum) station was shown on the property in a 1955 Sanborn Map. The facility was not listed in the EDR Report or on the SCDHEC UST database at the time of the Phase I ESA.

Access from Interstate 26 to the new port will require right-of-way from Tract 24. Based on the historical use of the property, the site was assessed for VOC, SVOC, TAL Metals, and PCBs.

Surficial and subsurface soil samples were collected from two borings (Tract 24 SB-1 and Tract 24 SB-2) for laboratory analysis. The subsurface soil sample interval was selected based on the field screening results. Temporary monitoring wells were installed at four depth intervals in each boring location. Based on field screening results, groundwater samples were collected for laboratory analysis from two temporary monitoring wells (Tract 24 TW-1 (4-8) and Tract 24 TW-2 (3-7)).

#### 4.5.2 Soil Results

##### Tract 24 SB-1 (0-2):

- Five VOCs were detected at concentrations greater than the MDLs. Benzene, cyclohexane, ethylbenzene, and isopropylbenzene concentrations exceeded the SSL-MCLs/Taps. No screening levels have been established for the other detected VOC (methylcyclohexane).

- 14 SVOCs were detected at concentrations greater than the MDLs. Naphthalene concentration exceeded the RSL and SSL-Tap. Benzo(a)pyrene concentration exceeded the RSL. Benzo(a)anthracene, benzo(b)fluoranthene, dibenzofuran, and 2-methylnaphthalene concentrations exceed the SSL-Taps. Other detected SVOC concentrations were less than the applicable screening levels.
- 14 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron and lead concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than the applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.

Tract 24 SB-1 (2-6):

- Four VOCs (cyclohexane, isopropylbenzene, methyl acetate, and methylcyclohexane) were detected at concentrations greater than the MDLs but less than applicable screening values.
- Seven SVOCs were detected at concentrations greater than the MDLs. Naphthalene and 2-methylnaphthalene concentrations exceeded the SSL-Taps. Other detected SVOC concentrations (acenaphthene, fluoranthene, fluorene, phenanthrene, and pyrene) were less than the applicable screening levels.
- 15 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cadmium and iron concentrations exceed the SSL-MCL/Taps. Other detected metal concentrations were less than the applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.

Tract 24 SB-2 (0-2):

- Eight VOCs (acetone, benzene, cyclohexane, ethylbenzene, isopropylbenzene, methylcyclohexane, toluene, and xylenes) were detected at concentrations greater than the MDLs but less than applicable screening levels.
- 11 SVOCs were detected at concentrations greater than the MDLs. Naphthalene concentration exceeded the RSL and SSL-Tap. Benzo(a)anthracene, dibenzofuran, and 2-methylnaphthalene concentrations exceeded the SSL-Taps. Other detected SVOC concentrations (acenaphthene, acenaphthylene, anthracene, fluoranthene, fluorene, phenanthrene, and pyrene) were less than the applicable screening levels.
- Eight of the 23 TAL Metals were detected at concentrations greater than the MDLs. Iron concentration exceeded the SSL-Tap. Other detected metal concentrations were less than the applicable screening levels.
- One PCB (PCB-1242) was detected at a concentration greater than the MDL but less than applicable screening levels.

Tract 24 SB-2 (10-14):

- Five VOCs (carbon disulfide, cyclohexane, ethylbenzene, isopropylbenzene, and methylcyclohexane) were detected at concentrations greater than the MDLs but less than applicable screening levels.
- Two SVOCs were detected at concentrations greater than the MDLs. Naphthalene and 2-methylnaphthalene concentrations exceeded the SSL-Taps.
- Ten of the 23 TAL Metals were greater than the MDLs. Arsenic concentration exceeded the RSL and SSL-MCL. Iron concentration exceeded the SSL-Tap.
- No PCBs were detected at concentrations greater than the MDLs.

#### 4.5.3 Groundwater Results

Tract 24 TW-1 (4-8):

- Seven VOCs (benzene, methylcyclohexane, ethylbenzene, isopropylbenzene, MTBE, toluene, and xylenes) were detected at concentrations greater than the MDLs but less than applicable screening levels.
- Six SVOCs (acenaphthene, anthracene, fluoranthene, fluorene, 2-Methylnaphthalene, and pyrene) were detected at concentrations greater than the MDLs but less than applicable screening levels.
- 19 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic, total beryllium, total chromium, and total lead concentrations exceeded the MCLs. Total aluminum, total cobalt, total iron, and total vanadium concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.

Tract 24 TW-2 (3-7):

- Eight VOCs were detected at concentrations greater than the MDLs. Benzene concentration exceeded the MCL. Other detected VOC concentrations (carbon disulfide, cyclohexane, methylcyclohexane, ethylbenzene, isopropylbenzene, toluene, and xylenes) were less than applicable screening levels.
- Nine SVOCs were detected at concentrations greater than the MDLs. Benzo(a)anthracene, 2-methylnaphthalene, and naphthalene concentrations exceeded the TWSL. Other detected SVOC concentrations (acenaphthene, anthracene, fluoranthene, fluorene, phenanthrene, and pyrene) were less than applicable screening levels.
- 17 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic, total chromium, and total and dissolved lead concentrations exceeded the MCLs. Total aluminum, total cobalt, and total iron concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening levels.
- Two PCBs (PCB-1248 and PCB-1260) were detected at concentrations exceeding the TWSLs.

#### 4.5.4 Discussion

Two surficial soil samples, two subsurface soil samples, and two groundwater samples were collected on Tract 24. Samples were analyzed for VOC, SVOC, TAL Metals, and PCBs.

Four VOCs (benzene, cyclohexane, ethylbenzene, and isopropylbenzene) were detected in one of the surficial soil samples at concentrations exceeding SSL-MCL/Taps. Six SVOCs were detected at concentrations exceeding screening levels. Naphthalene was detected at concentrations exceeding the RSL and SSL-Tap in each of the surficial soil samples and at concentrations exceeding the SSL-Tap in the subsurface soil samples. Benzo(a)pyrene was detected in one surficial soil sample at a concentration exceeding the RSL. Other SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, dibenzofuran, and 2-methylnaphthalene) were detected in one or more of the collected samples at concentrations exceeding the SSL-Taps.

Arsenic was detected in two of the collected soil samples at concentrations exceeding the ISL and one of the collected soil samples at a concentration exceeding the RSL. Four metals (arsenic, cadmium, iron, and lead) were detected in one or more of the soil samples at concentrations exceeding the SSL-MCL/Taps.

One VOC (benzene) was detected in one groundwater sample at a concentration exceeding the MCL. Three SVOCs (benzo(a)anthracene, 2-methylnaphthalene, and naphthalene) were detected in one groundwater sample at concentrations exceeding the TWSLs.

Four metals (arsenic, beryllium, chromium, and lead) were detected in one or both of the groundwater samples at concentrations exceeding the MCLs. Lead was detected in one of the laboratory filtered groundwater samples at a concentration exceeding the MCL.

Iron was detected in both groundwater samples at concentrations exceeding the TWSL. Aluminum, cobalt, iron, and vanadium were detected in one or both of the groundwater samples at concentrations exceeding the TWSL. Two PCBs (PCB-1248 and PCB-1260) were detected in one groundwater sample at concentrations exceeding the MCLs.

#### 4.5.5 Conclusions

Arsenic was present in soil samples at concentrations exceeding ISLs. The detected arsenic concentrations were consistent with background concentrations in South Carolina.

Benzene was present in one groundwater sample at a concentration exceeding the MCL. Two PCBs (PCB-1248 and PCB-1260) were detected in one groundwater sample at

concentrations exceeding the MCLs. Four metals (arsenic, beryllium, chromium, and lead) were present in one or both groundwater samples at concentrations exceeding MCLs. One metal (lead) was detected in one filtered groundwater sample at a concentration exceeding the MCL. Other metals (arsenic, beryllium, and chromium) concentrations were less than the MCLs in the filtered groundwater samples.

Four analytes (2-Methylnaphthalene, benzo(a)anthracene, naphthalene, and lead) were detected in the soils at concentrations exceeding the SSL-Taps. Concentrations of these analytes exceeded the TWSLs in one of the collected groundwater samples. There are no MCLs listed for these analytes.

Based on the groundwater results for cyclohexane, ethylbenzene, isopropylbenzene, benzo(b)fluoranthene, and dibenzofuran and filtered groundwater results for cadmium and iron, it does not appear these parameters which were detected in the soil at concentrations exceeding the SSL-MCL/Taps have impacted site groundwater.

## **4.6 Tract 26 – Plantation Painters**

### **4.6.1 Site Background**

Tract 26 (Charleston County TMS # 466-16-00-019) was used by Plantation Painters at the time of the Phase I ESA. Paints and thinners were stored inside and out. Plantation Painters is listed on the RCRA-SQG database with no violations. The property owner stated the RCRA listing was from disposing of paint chips that contained lead based paint. City directories listed a body shop on the property (1975-1990). A store was shown on the property in a 1955 Sanborn Map. Historical ownership indicated Atlantic Pest Control previously owned the property. The adjoining property to the north has been used as a repair shop since at least 1955.

Access from Interstate 26 to the new port will require right-of-way from Tract 26. Based on the historical use of the property and the northern adjacent property, the site was assessed for VOC, SVOC, TAL Metals, PCBs, and pesticides. Based on initial analytical results, Tract 26 SB-1 (0-2) soil sample was also analyzed for TCLP lead.

Surficial and subsurface soil samples were collected from one boring (Tract 26 SB-1) for laboratory analysis. The subsurface soil sample interval was selected based on the field screening results. Temporary monitoring wells were installed at three depth intervals in the boring. Based on field screening results, a groundwater sample was collected for laboratory analysis from one temporary monitoring well (Tract 26 TW-1).

### **4.6.2 Soil Results**

#### Tract 26 SB-1 (0-2):

- Two VOCs (1,2-dichloroethane and acetone) were detected at concentrations greater than the MDLs but less than applicable screening levels.

- Eight SVOCs were detected at concentrations greater than the MDLs. Benzo(a)anthracene and benzo(b)fluoranthene concentrations exceeded the SSL-Taps. Other detected SVOC concentrations (benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, phenanthrene, and pyrene) were less than applicable screening levels.
- 15 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron, lead, and manganese concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- Two pesticides were detected at concentrations greater than the MDLs. Dieldrin concentration exceeded the ISL, RSL, and SSL-Tap. 4,4'-DDD concentration was less than applicable screening levels.
- TCLP lead was less than the regulatory level.

Tract 26 SB-1 (52-55):

- Six VOCs (acetone, benzene, carbon disulfide, ethylbenzene, methylcyclohexane, and toluene) were detected at concentrations greater than the MDLs but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 13 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic, iron, and manganese concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- Two pesticides were detected at concentrations greater than the MDLs. Dieldrin concentration exceeded the SSL-Tap. 4,4'-DDT concentration was less than applicable screening levels.

#### 4.6.3 Groundwater Results

Tract 26 TW-1 (26-30):

- One VOC (toluene) was detected at a concentration greater than the MDL but less than applicable screening values.
- No SVOCs detected at concentrations greater than the MDLs.
- 19 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic, total beryllium, total chromium, and total lead concentrations exceeded the MCLs. Total aluminum, total cobalt, total iron, total manganese, and total vanadium concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

#### 4.6.4 Discussion

One surficial soil sample, one subsurface soil sample, and one groundwater sample were collected on Tract 26. Samples were analyzed for VOC, SVOC, TAL Metals, PCBs, and pesticides. Based on initial analytical results, one surficial soil sample was also analyzed for TCLP lead.

No VOCs were detected at concentrations exceeding screening levels in the collected soil samples. Two SVOCs (benzo(a)anthracene and benzo(b)fluoranthene) were detected in the surficial soil sample at concentrations exceeding the SSL-Taps. Arsenic was detected at a concentration exceeding the ISL, RSL, and SSL-MCL in the surficial soil sample and at a concentration exceeding the SSL-MCL in the subsurface soil sample. Three metals (iron, lead, and manganese) were detected in the soil at concentrations exceeding the SSL-MCL/Taps. No PCBs were detected in the soil samples at concentration exceeding screening levels. One pesticide (dieldrin) was detected in the surficial soil sample at a concentration exceeding the ISL, RSL, and SSL-Tap and in the subsurface soil sample at a concentration exceeding the SSL-Tap. TCLP lead was not detected at a concentration exceeding the screening level.

No VOCs or SVOCs were detected at concentrations exceeding screening levels in the collected groundwater sample. Four metals (arsenic, beryllium, chromium, and lead) were detected at concentrations exceeding the MCLs. Aluminum, cobalt, iron, manganese, and vanadium were detected at concentrations exceeding the TWSLs. Metals were not detected in the filtered groundwater samples at concentrations exceeding screening levels. No PCBs or pesticides were detected in the groundwater at concentrations exceeding screening levels.

#### 4.6.5 Conclusion

One pesticide (dieldrin) was detected in the surficial soil sample at a concentration exceeding the ISL.

Arsenic was present in soil samples at concentrations exceeding ISLs. The detected arsenic concentrations were consistent with background concentrations in South Carolina.

Based on the groundwater results for benzo(a)anthracene, benzo(b)fluoranthene, and dieldrin and filtered groundwater results for iron, lead, and manganese, it does not appear these parameters which were detected in the soil at concentrations exceeding the SSL-MCL/Taps have impacted site groundwater.

Four metals (arsenic, beryllium, chromium, and lead) were detected in the groundwater at concentrations exceeding the MCLs; however, concentrations of each were less than the MCLs in the filtered groundwater sample.

## 4.7 Tract 28 and Tract 61 – Road 1 Truck Repair

### 4.7.1 Site Background

Tract 28 and Tract 61 (Charleston County TMS # 466-16-00-017 and 466-16-00-016) are developed with a truck repair shop. Closed floor drains, trough drains, oils, lubricants, parts washers, oil water separator, batteries, drums, a tote, and an AST were observed on-site during the Phase I ESA site reconnaissance. Steel or concrete plates were observed east of the building. They were not lifted. Their purpose is unknown. A large store was shown on the property in a 1955 Sanborn Map. City directory listings for the property, 2102 Meeting Street Road, included Jones Truck Service (2009), Road 1 (2009), BPK Construction Equipment Sales and Service (1996 and 1985), Hertz Corporation (1975 and 1970), Livingston's Self Service food store (1961), and Triangle Service Center (1961).

Access from Interstate 26 to the new port will require right-of-way from Tract 28 and Tract 61. Based on the historical use of the property, the site was assessed for VOC, SVOC, TAL Metals, PCBs, and pesticides.

A surficial soil sample was collected from one boring (Tract 28 SB-1) for laboratory analysis. A subsurface interval was not selected based on shallow direct push advancement refusal and the field screening results. Temporary monitoring wells were installed at four depth intervals in the boring. Based on field screening results, a groundwater sample was collected for laboratory analysis from one temporary monitoring well (Tract 28 TW-1 (40-44)).

### 4.7.2 Soil Results

#### Tract 28 SB-1 (0-2):

- Three VOCs (acetone, benzene, and toluene) were detected at concentrations greater than the MDLs but less than applicable screening levels.
- No SVOCs were detected at concentrations greater than the MDL.
- 15 of the 23 TAL Metals detected at concentrations greater than the MDL. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron, lead, and manganese concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- One pesticide (4,4'-DDT) was detected at a concentration greater than the MDL but less than applicable screening levels.

### 4.7.3 Groundwater Results

#### Tract 28 TW-1 (40-44):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 20 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic, total beryllium, total cadmium, total chromium, total lead, and total

selenium concentrations exceeded the MCLs. Total aluminum, total cobalt, total iron, total manganese, and total vanadium concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening levels.

- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

#### 4.7.4 Discussion

One surficial soil sample and one groundwater sample were collected on Tract 28. Samples were analyzed for VOC, SVOC, TAL Metals, PCBs, and pesticides.

No VOCs or SVOCs were detected at concentrations exceeding screening levels in the collected soil sample. Arsenic was detected at a concentration exceeding the ISL, RSL, and SSL-MCL. Three metals (iron, lead, and manganese) were detected at concentration exceeding the SSL-MCL/Taps. No PCBs or pesticides were detected in the soil samples at concentrations exceeding screening levels.

No VOCs or SVOCs were detected at concentrations exceeding screening levels in the collected groundwater sample. Six metals (arsenic, beryllium, cadmium, chromium, lead, and selenium) were detected at concentrations exceeding the MCLs. Aluminum, cobalt, iron, manganese, and vanadium were detected at concentrations exceeding TWSLs. Metals were not detected in the filtered groundwater samples at concentrations exceeding screening levels. No PCBs or pesticides were detected in the groundwater at concentrations exceeding screening levels.

#### 4.7.5 Conclusion

Arsenic was present in soil samples at concentrations exceeding ISLs. The detected arsenic concentrations were consistent with background concentrations in South Carolina.

Based on filtered groundwater results for iron, lead, and manganese, it does not appear these parameters which were detected in the soil at concentrations exceeding the SSL-MCL/Taps have impacted site groundwater.

Six metals (arsenic, beryllium, cadmium, chromium, lead, and selenium) were detected in the groundwater at concentrations exceeding the MCLs; however, concentrations of each were less than the MCLs in the filtered groundwater sample.

### **4.8 Tracts 29, 30, 31, 32, 33, 59, 65– Macalloy**

#### 4.8.1 Site Background

Tract 29 (TMS# 466-00-00-063), Tract 30 (TMS# 466-00-00-052), Tract 31 (TMS# 466-00-00-066), Tract 32 (TMS# 466-00-00-064), Tract 33 (TMS# 466-00-00-010), Tract 59 (TMS# 466-00-00-062), and Tract 65 (marshland of Shipyard Creek, not identified with TMS#) are part of the former Macalloy Corporation site where a ferrochromium alloy

smelting plant operated from 1941 until 1998. The site is on the National Priorities List (NPL) because of contaminated groundwater, sediment, and soil from past operations. Contaminants of concern are hexavalent chromium, arsenic, copper, lead, zinc, radium 226, thorium 232, potassium 40, and uranium 235. Radiation on the site was found in the former concentrator area on the southwest part of the property. Hexavalent chromium in the groundwater is being treated by injection of sodium dithionite and ferrous sulfate. Site cleanup activities for industrial land use were completed in 2006. Five-year reviews are conducted by the EPA. The first was completed in 2010. The second is required to be completed in July 2015.

Access from Interstate 26 to the new port will require right-of-way from Tract 29, Tract 30, Tract 31, Tract 32, Tract 33, Tract 59, and Tract 65. Based on the historical use of the property, the site was assessed for VOC, SVOC, TAL Metals, hexavalent chromium, PCBs, and pesticides. Based on initial analytical results, Tract 29 SB-1 (4-8) and Tract 33 SB-2 (0-2) soil samples were also analyzed for TCLP metals.

A surficial and subsurface soil sample was collected from six borings (Tract 29 SB-1, Tract 29 SB-2, Tract 33 SB-1, Tract 33 SB-2, Tract 33 SB-3, and Tract 33 SB-4) for laboratory analysis. Temporary monitoring wells were installed at two depth intervals in the borings. Groundwater was not encountered in the shallow temporary well Tract 33 TW-3 (8-12). Based on field screening results and field conditions, a groundwater sample was collected for laboratory analysis from six temporary monitoring wells (Tract 29 TW-1 (8-12), Tract 29 TW-2 (24-28), Tract 33 TW-1 (20-24), Tract 33 TW-2 (20-24), Tract 33 TW-3 (20-24), and Tract 33 TW-4 (16-20)).

#### 4.8.2 Soil Results

##### Tract 29 SB-1 (0-2):

- One VOC (carbon disulfide) was detected at a concentration greater than the MDL but less than applicable screening levels.
- One SVOC (bis(2-ethylhexyl)phthalate) was detected at a concentration greater than the MDL but less than applicable screening levels.
- 15 of the 23 TAL Metals detected at concentrations greater than the MDL. Arsenic concentration exceeded the RSL and SSL-MCL. Cobalt and iron concentrations exceeded the SSL-Taps. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium concentration exceeded the RSL and SSL-Tap.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

##### Tract 29 SB-1 (4-8):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 17 of the 23 TAL Metals detected at concentrations greater than the MDL. Lead concentration exceeded the RSL and SSL-MCL. Cadmium, cobalt, iron,

manganese, nickel, and zinc concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.

- Hexavalent chromium concentration exceeded the RSL and SSL-Tap.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- Two TCLP metals (barium and lead) were detected at concentrations were detected at concentrations less than the TCLP regulatory levels. Other analyzed TCLP Metals were less than the MDLs.

Tract 29 SB-2 (0-2):

- Four VOCs were detected at concentrations greater than the MDLs. One VOC (methylene chloride) concentration exceeded the SSL-MCL. Other detected VOC concentrations (acetone, 2-butanone, and carbon disulfide) were less than applicable screening levels.
- Four SVOCs were detected at concentrations greater than the MDLs. Benzo(a)pyrene concentrations exceeded the RSLs. Other detected SVOCs concentrations (benzo(b)fluoranthene, benzo(k)fluoranthene, and bis(2-ethylhexyl)phthalate) were less than applicable screening levels.
- 18 of the 23 TAL Metals detected at concentrations greater than the MDL. Arsenic concentration exceeded the RSL and SSL-MCL. Cadmium, cobalt, iron, lead, manganese, and nickel concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium was not detected at concentrations greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 29 SB-2 (4-8):

- Three VOCs (2-butanone, acetone, and carbon disulfide) were detected at concentrations greater than the MDLs but less than applicable screening levels.
- No SVOCs were detected at concentrations greater than the MDLs.
- 16 of the 23 TAL Metals detected at concentrations greater than the MDL. Arsenic concentration exceeded the RSL, and SSL-MCL. Cadmium and iron concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium was not detected at concentrations greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 33 SB-1 (0-2):

- No VOCs were detected at concentrations greater than the MDLs.
- One SVOCs (bis(2-ethylhexyl)phthalate) was detected at concentrations greater than the MDLs but less than applicable screening levels.

- 18 of the 23 TAL Metals detected at concentrations greater than the MDL. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cadmium, cobalt, and iron concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium concentration exceeded the RSL and SSL-Tap.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 33 SB-1 (4-8):

- One VOC (methylene chloride) was detected at a concentration greater than the MDL but less than applicable screening levels.
- One SVOC (dimethyl phthalate) was detected at a concentration greater than the MDL but less than applicable screening levels.
- 17 of the 23 TAL Metals detected at concentrations greater than the MDL. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cadmium, cobalt, and iron concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium concentration exceeded the RSL and SSL-Tap.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 33 SB-2 (0-2):

- Six VOCs (1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,4-dichlorobenzene, 2-butanone, acetone, and chlorobenzene) were detected at a concentration greater than the MDL but less than applicable screening levels.
- One SVOC (dimethyl phthalate) was detected at a concentration greater than the MDL but less than applicable screening levels.
- 14 of the 23 TAL Metals detected at concentrations greater than the MDL. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron concentration exceeded the RSL and SSL-Tap. Cadmium, cobalt, copper, lead, manganese, and nickel concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium was not detected at concentrations greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- Ten pesticides were detected at concentrations greater than the MDLs. Beta-BHC concentration exceeded the RSL and SSL-Tap. Alpha-BHC, chlordane, 4,4-DDD, 4,4-DDE, and 4,4-DDT concentrations exceeded the SSL-MCL/Taps. Other detected pesticide concentrations (delta-BHC, alpha-chlordane, gamma-chlordane, and heptachlor) were less than applicable screening levels.
- Four TCLP metals (barium, chromium, lead, and selenium) were detected at concentrations less than the TCLP regulatory levels. Other analyzed TCLP Metals were less than the MDLs.

Tract 33 SB-2 (10-14):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 18 of the 23 TAL Metals detected at concentrations greater than the MDL. Arsenic concentration exceeded the RSL and SSL-MCL. Cadmium, cobalt, and iron concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium was not detected at concentrations greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- Three pesticides (4,4-DDD, 4,4-DDE, and 4,4-DDT) were detected at concentrations greater than the MDLs but less than applicable screening levels.

Tract 33 SB-3 (0-2):

- One VOC (carbon disulfide) was detected at a concentration greater than the MDL but less than applicable screening levels.
- 25 SVOCs were detected at a concentration greater than the MDL. Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and dibenz(a,h)anthracene concentrations exceeded the ISLs, RSLs, and SSL-MCL/Taps. Benzo(k)fluoranthene and indeno(1,2,3-cd)pyrene concentrations exceeded the RSLs and SSL-Taps. Chrysene, dibenzofuran, 2-methylnaphthalene, and naphthalene concentrations exceeded the SSL-Taps. Other detected SVOCs concentrations (acenaphthene, acenaphthylene, anthracene, benzo(g,h,i)perylene, butyl benzyl phthalate, carbazole, di-n-butyl phthalate, bis(2-ethylhexyl)phthalate, fluoranthene, fluorene, 3/4-methylphenol, 4-nitrophenol, phenanthrene, phenol, and pyrene) were less than applicable screening levels.
- 20 of the 23 TAL Metals detected at concentrations greater than the MDL. Arsenic concentration exceeded the RSL and SSL-MCL. Antimony, barium, cobalt, iron, lead, manganese, and mercury concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium was not detected at concentrations greater than the MDL.
- One PCB (PCB-1248) was detected at a concentration greater than the MDL but less than applicable screening levels. No other PCBs were detected at concentrations greater than the MDLs.
- Two pesticides (4,4-DDE and 4,4-DDT) were detected at concentrations greater than the MDLs but less than applicable screening levels.

Tract 33 SB-3 (14-18):

- Four VOCs (2-butanone, acetone, carbon disulfide, and chloromethane) concentrations greater than the MDLs but less than applicable screening levels.

- One SVOC (phenol) was detected at a concentration greater than the MDLs but less than applicable screening levels.
- 18 of the 23 TAL Metals detected at concentrations greater than the MDL. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cadmium, cobalt, iron, and manganese concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium was not detected at concentrations greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 33 SB-4 (0-2):

- Two VOCs (acetone and benzene) concentrations were greater than the MDLs but less than applicable screening levels.
- 13 SVOCs were detected at a concentration greater than the MDLs. Benzo(a)pyrene concentration exceeded the RSL. Benzo(a)anthracene and benzo(b)fluoranthene concentrations exceeded the SSL-Taps. Other detected SVOCs concentrations (acenaphthene, anthracene, benzo(k)fluoranthene, carbazole, chrysene, dibenzofuran, fluoranthene, fluorene, phenanthrene, and pyrene) were less than applicable screening levels.
- 19 of the 23 TAL Metals detected at concentrations greater than the MDL. Arsenic concentration exceeded the RSL and SSL-MCL. Cobalt, iron, lead, and manganese concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium was not detected at concentrations greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- Three pesticides (4,4-DDD, 4,4-DDE, and 4,4-DDT) were detected at concentrations greater than the MDLs. 4,4-DDD concentration exceeded the SSL-Tap. Other detected concentrations were less than applicable screening levels.

Tract 33 SB-4 (22-26):

- Five VOCs (2-butanone, acetone, benzene, ethylbenzene, and toluene) concentrations were greater than the MDLs but less than applicable screening levels.
- No SVOCs were detected at a concentration greater than the MDLs.
- 17 of the 23 TAL Metals detected at concentrations greater than the MDL. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cobalt, iron, and manganese concentrations exceeded the SSL-Taps. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium was not detected at concentrations greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

### 4.8.3 Groundwater Results

#### Tract 29 TW-1 (8-12):

- One VOC (toluene) was detected at a concentration greater than the MDL but less than applicable screening levels.
- One SVOC (Bis(2-ethylhexyl)phthalate) was detected at a concentration greater than the MDL but less than applicable screening level.
- 18 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total antimony, total and dissolved beryllium, total chromium, and total lead concentrations exceeded the MCLs. Total aluminum, total and dissolved cobalt, and total and dissolved iron concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium was not detected at a concentration greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

#### Tract 29 TW-2 (24-28):

- No VOCs were detected at a concentration greater than the MDLs.
- One SVOC (Bis(2-ethylhexyl)phthalate) was detected at a concentration greater than the MDL but less than applicable screening level.
- 18 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic, total beryllium, total chromium, and total lead concentrations exceeded the MCLs. Total aluminum, total cobalt, total iron, total manganese, and total vanadium concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium was not detected at a concentration greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

#### Tract 33 TW-1 (20-24):

- One VOC (carbon disulfide) was detected at a concentration greater than the MDL but less than applicable screening levels.
- One SVOC (Bis(2-ethylhexyl)phthalate) was detected at a concentration greater than the MDL but less than applicable screening level.
- 18 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic, total beryllium, total chromium, and total lead concentrations exceeded the MCLs. Total aluminum, total cobalt, total iron, total manganese, and total vanadium concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium was not detected at a concentration greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 33 TW-2 (20-24):

- One VOC (carbon disulfide) was detected at a concentration greater than the MDL but less than applicable screening levels.
- No SVOCs were detected at a concentration greater than the MDLs.
- 19 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic, total beryllium, total chromium, and total lead concentrations exceeded the MCLs. Total aluminum, total cobalt, total iron, total manganese, and total vanadium concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium was not detected at a concentration greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 33 TW-3 (20-24):

- One VOC (carbon disulfide) was detected at a concentration greater than the MDL but less than applicable screening levels.
- No SVOCs were detected at a concentration greater than the MDLs.
- 12 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total chromium concentration exceeded the MCL. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium was not detected at a concentration greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 33 TW-4 (14-18):

- No VOCs were detected at a concentration greater than the MDL.
- No SVOCs were detected at a concentration greater than the MDLs.
- 18 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic, total beryllium, total cadmium, total and dissolved chromium, total lead, and dissolved thallium concentrations exceeded the MCLs. Total aluminum, total and dissolved cobalt, total iron, total manganese, and total vanadium concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium was not detected at a concentration greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

#### 4.8.4 Discussion

Six surficial soil samples, six subsurface soil samples, and six groundwater sample were collected on Tract 29 and Tract 33. Samples were analyzed for VOC, SVOC, TAL

Metals, hexavalent chromium, PCBs, and pesticides. Based on initial analytical results, one surficial and one subsurface soil sample were also analyzed for TCLP metals.

One VOC (methylene chloride) was detected in one surficial soil sample at a concentration exceeding SSL-MCL. Four SVOCs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and dibenz(a,h)anthracene) were detected in one surficial soil sample at concentrations exceeding the ISLs, RSLs, and SSL-MCL/Taps. Nine SVOCs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, 2-methylnaphthalene, dibenzofuran, and naphthalene) were detected in one or more surficial soil samples at concentrations exceeding RSLs and/or SSL-Taps.

Arsenic was detected at a concentration exceeding the ISL, RSL, and SSL-MCL in five of the collected soil samples and at concentrations exceeding the RSL and SSL-MCL in six of the collected soil samples. Lead was detected in one subsurface soil sample at a concentration exceeding RSL and SSL-MCL. Iron was detected in one surficial soil sample at a concentration exceeding RSL and SSL-Tap. Eleven metals (antimony, barium, cadmium, cobalt, copper, iron, lead, manganese, mercury, nickel, and zinc) were detected in one or more soil samples at concentrations exceeding the SSL-MCL/Taps. Hexavalent chromium was detected in four soil samples at concentrations exceeding the RSL and SSL-Tap.

One pesticide (beta-BHC) was detected in one surficial soil sample at a concentration exceeding the RSL and SSL-Tap. One pesticide (4,4-DDD) was detected in two surficial soil samples at concentrations exceeding the SSL-Tap. Four pesticides (4,4-DDE, 4,4-DDT, alpha-BHC, and chlordane) were detected in one surficial soil sample at concentrations exceeding the SSL-MCL/Taps.

TCLP metals were not detected at concentrations exceeding TCLP regulatory levels.

No VOCs or SVOCs were detected at concentrations exceeding screening levels in the collected groundwater sample. Seven metals (antimony, arsenic, beryllium, cadmium, chromium, lead, and thallium) were detected at concentrations exceeding the MCLs. Aluminum, cobalt, iron, manganese, and vanadium were detected at concentrations exceeding TWSLs. Hexavalent chromium, PCBs, and pesticides were not detected in the groundwater at concentrations exceeding screening levels.

#### 4.8.5 Conclusion

Four SVOCs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and dibenz(a,h)anthracene) were detected in one surficial soil sample at concentrations exceeding the ISLs.

Arsenic was present in soil samples at concentrations exceeding ISLs. The detected arsenic concentrations were consistent with background concentrations in South Carolina.

Based on the groundwater results for VOC, SVOC, pesticides, and PCBs and filtered groundwater results for aluminum, antimony, arsenic, lead, manganese, and vanadium, it does not appear these parameters which were detected in the soil at concentrations exceeding the SSL-MCL/Taps have impacted site groundwater.

Beryllium was detected at concentrations exceeding the MCL in both the unfiltered and filtered groundwater sample collected from one monitoring well. Beryllium was not detected at a concentration greater than the MDL in the remaining filtered groundwater samples. Chromium was detected at concentrations exceeding the MCL in both the unfiltered and filtered groundwater sample collected from one monitoring well. Chromium was not detected at a concentration greater than the MCL in the remaining filtered groundwater samples. Thallium was detected at a concentration exceeding the MCL in one filtered groundwater sample. Four metals (antimony, arsenic, chromium, and lead) were detected in the groundwater at concentrations exceeding the MCLs; however, concentrations of each were less than the MCLs in the filtered groundwater sample.

#### **4.9 Tract 34, Tract 35, and Tract 70 – Former Charleston Navy Base**

##### **4.9.1 Site Background**

Tract 34 (TMS# 400-00-00-105), Tract 35 (TMS# 400-00-00-004), and Tract 70 (not identified with TMS#) are part of the former Charleston Navy Base. The Navy Base is listed on the CERCLIS, GWCI, CORRACTS, US ENG Controls, US Inst Controls, SHWS, RAATS, RCRA-TSDF, PADS, MANIFEST, RCRA-NonGen, and FINDS databases. Tract 34, Tract 35, and Tract 70 are part of SWMU 9 (a closed monitored landfill), SWMU 196 (previous storage area of solvents, paints, acid, and lubricant oil, a potassium chromate tank, and transformers), SCDHEC UST Facility ID# 14437, and AOC 654 (the former septic tank and drain field associated with Building 661) on the Navy Base.

Access from Interstate 26 to the new port will require right-of-way from Tract 34, Tract 35, and Tract 70. Based on the historical use of the property, the site was assessed for VOC, SVOC, TAL Metals, PCBs, and pesticides. The analytical suite for samples collected from Shipyard Creek also included hexavalent chromium because of operations on the former Macalloy Property (Tract 33). Based on initial analytical results, Tract 35 SB-4 (0-2) soil sample was also analyzed for TCLP lead.

Surficial and subsurface soil samples were collected from six borings (Tract 35 SB-1, Tract 35 SB-2, Tract 35 SB-4, Tract 35 SB-5, Tract 35 SB-6, and Tract 35 SB-7) for laboratory analysis. The subsurface soil sample interval was selected based on the field screening results. A surficial soil sample was collected from one boring (Tract 35 SB-3)

for laboratory analysis. A subsurface interval was not selected at this location based on shallow direct push advancement refusal.

Temporary monitoring wells were installed at intervals in each boring location. Based on field screening results, groundwater samples were collected for laboratory analysis from seven temporary monitoring wells (Tract 35 TW-1 (40-44), Tract 35 TW-2 (26-30), Tract 35 TW-3 (1-5), Tract 35 TW-4 (16-20), Tract 35 TW-5 (0-10), Tract 35 TW-6 (16-20), and Tract 35 TW-7 (20-24)). A new disposable 10-foot PVC well screen was installed to facilitate groundwater sampling from monitoring well Tract 35 TW-5 because of slow recharge.

Sediment samples were collected from the bank of Shipyard Creek (Tract 35 SS-1 and Tract 35 SS-2). A surface water sample was also collected from Shipyard Creek (Tract 35 SW-1).

#### 4.9.2 Soil Results

##### Tract 35 SB-1 (0-2):

- Five VOCs (acetone, benzene, carbon disulfide, ethylbenzene, and toluene) were detected at concentrations greater than the MDLs. Benzene concentration exceeded the SSL-MCL. Other detected VOC concentrations were less than applicable screening levels.
- No SVOCs were detected at concentrations greater than the MDLs.
- 14 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron and manganese concentrations exceeded the SSL-Taps. Other detected metal concentrations were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

##### Tract 35 SB-1 (12-16):

- One VOC (acetone) was detected at a concentration greater than the MDL but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 16 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, SSL-MCL. Cobalt, iron, and manganese concentrations exceeded the SSL-Taps. Other detected metal concentrations were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

##### Tract 35 SB-2 (0-2):

- 11 VOCs (acetone, benzene, 2-butanone, carbon disulfide, chlorobenzene, methylcyclohexane, 1,4-dichlorobenzene, ethylbenzene, isopropylbenzene,

toluene, and xylenes) were detected at a concentration greater than the MDL but less than applicable screening values.

- One SVOC (2-Methylnaphthalene) was detected at a concentration greater than the MDL but less than applicable screening values.
- 15 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron, lead, and manganese concentrations exceed the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- Two PCBs (PCB-1242 and PCB-1260) were detected at concentrations greater than the MDLs but less than applicable screening values. No other PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 35 SB-2 (24-28):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 16 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cobalt, iron, and manganese concentrations exceeded the SSL-Taps. Other detected metal concentrations were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 35 SB-3 (0-2):

- Nine VOCs (acetone, benzene, carbon disulfide, cyclohexane, methylcyclohexane, ethylbenzene, isopropylbenzene, toluene, and xylenes) were detected at concentrations greater than the MDLs. Benzene concentration exceeded the SSL-MCL. Other detected VOC concentrations were less than applicable screening levels.
- Five SVOCs (chrysene, fluoranthene, 2-methylnaphthalene, phenanthrene, and pyrene) were detected at concentrations greater than the MDLs but less than applicable screening levels.
- 15 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Copper, iron, lead, and manganese concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- One PCB (PCB-1260) was detected at a concentration greater than the SSL-Tap. No other PCBs were detected at concentrations greater than the MDLs.
- 14 pesticides were detected at concentrations greater than the MDLs. Gamma-BHC (lindane), 4,4-DDD, and dieldrin concentrations exceeded the SSL-MCL/Taps. Other detected pesticide concentrations were less than applicable screening levels.

Tract 35 SB-4 (0-2):

- One VOC (acetone) was detected at a concentration greater than the MDL but less than applicable screening levels.
- Eight SVOCs were detected at concentrations greater than the MDLs. Benzo(a)pyrene concentration exceeded the RSL. Benzo(a)anthracene and benzo(b)fluoranthene concentrations exceeded the SSL-Taps. Other detected SVOC concentrations (chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene) were less than applicable screening levels.
- 15 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the RSL and SSL-MCL. Barium, iron, lead, and mercury concentrations exceeded the SSL-MCL/Taps. Other detected metals were less than applicable screening levels.
- One PCB (PCB-1260) was detected at a concentration greater than the MDL but less than applicable screening values. No other PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.
- TCLP lead concentration was less than the regulatory level.

Tract 35 SB-4 (10-14):

- One VOC (chlorobenzene) was detected at concentrations greater than the MDL but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- Ten of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the RSL and SSL-MCL. Iron concentration exceeded the SSL-Tap. Other detected metals were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 35 SB-5 (0-2):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 16 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron, lead, and manganese concentrations exceeded the SSL-MCL/Taps. Other detected metals were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- Three pesticides (4,4-DDD, 4,4-DDE, and 4,4-DDT) were detected at concentrations greater than the MDLs. 4,4-DDD and 4,4-DDT concentrations exceeded the SSL-Taps. Other detected pesticides were less than applicable screening levels.

Tract 35 SB-5 (4-8):

- Four VOCs (chlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, and 1,4-dichlorobenzene) were detected at concentrations greater than the MDLs but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- Ten of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the RSL and SSL-MCL. Iron concentration exceeded the SSL-Tap. Other detected metals were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- Two pesticides (4,4-DDD and 4,4-DDT) were detected at concentrations greater than the MDLs but less than applicable screening levels.

Tract 35 SB-6 (0-2):

- Six VOCs (acetone, benzene, 2-butanone, carbon disulfide, ethylbenzene, and toluene) were detected at concentrations greater than the MDLs. Benzene concentration exceeded the SSL-MCL. Other detected VOC concentrations were less than applicable screening levels.
- Seven SVOCs were detected at concentrations greater than the MDLs. Benzo(a)pyrene concentration exceeded the RSL. Benzo(a)anthracene and benzo(b)fluoranthene concentrations exceeded the SSL-Taps. Other detected SVOC concentrations (benzo(k)fluoranthene, chrysene, fluoranthene, and pyrene) were less than applicable screening levels.
- 17 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Beryllium, copper, iron, lead, manganese, and mercury concentrations exceeded the SSL-MCL/Taps. Other detected metals were less than applicable screening levels.
- Hexavalent chromium was not detected at concentrations greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 35 SB-6 (6-10):

- One VOC (acetone) was detected at a concentration greater than the MDL but less than applicable screening values.
- Seven SVOCs were detected at concentrations greater than the MDLs. Benzo(a)pyrene concentration exceeded the RSL. Benzo(a)anthracene and benzo(b)fluoranthene concentrations exceeded the SSL-Taps. Other detected SVOC concentrations (benzo(k)fluoranthene, bis(2-ethylhexyl)phthalate, fluoranthene, and pyrene) were less than applicable screening levels.
- 17 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cobalt, iron, lead,

manganese, and mercury concentrations exceeded the SSL-MCL/Taps. Other detected metals were less than applicable screening levels.

- Hexavalent chromium was not detected at concentrations greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 35 SB-7 (0-2):

- Five VOCs (acetone, benzene, carbon disulfide, ethylbenzene, and toluene) detected at concentrations greater than the MDL. Benzene concentration exceeded the SSL-MCL. Other detected VOC concentrations were less than applicable screening levels.
- No SVOCs were detected at concentrations greater than the MDLs.
- 17 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cobalt, iron, lead, manganese, and mercury concentrations exceeded the SSL-MCL/Taps. Other detected metals were less than applicable screening levels.
- Hexavalent chromium was not detected at concentrations greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 35 SB-7 (20-24):

- Seven VOCs (acetone, benzene, 2-butanone, carbon disulfide, methylcyclohexane, ethylbenzene, and toluene) were detected at concentrations greater than the MDLs. Benzene concentration exceeded the SSL-MCL. Other detected VOCs were less than applicable screening levels.
- No SVOCs were detected at concentrations greater than the MDLs.
- 16 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron, manganese, and selenium concentrations exceeded the SSL-MCL/Taps.
- Hexavalent chromium was not detected at concentrations greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

#### 4.9.3 Groundwater Results

Tract 35 TW-1 (40-44):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- Six of the 23 TAL Metals were detected at concentrations greater than the MDLs but less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 35 TW-2 (26-30):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- Seven of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total and dissolved vanadium concentrations exceeded the TWSL. Other detected metal concentrations were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 35 TW-3 (1-5):

- No VOCs were detected at concentrations greater than the MDLs.
- One SVOC (2-methylnaphthalene) was detected at a concentration greater than the MDL but less than applicable screening values.
- Seven of the 23 TAL Metals were detected at concentrations greater than the MDLs but less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 35 TW-4 (16-20):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 19 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total and dissolved arsenic, total beryllium, total cadmium, total chromium, and total lead concentrations exceeded the MCLs. Total cobalt, total iron, total and dissolved manganese, and total vanadium concentrations exceeded TWSLs. Other detected metal concentrations were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 35 TW-5 (0-10):

- Four VOCs (benzene, chlorobenzene, cis-1,2-dichloroethene, and vinyl chloride) were detected at concentrations greater than the MDLs but less than applicable screening levels
- No SVOCs were detected at concentrations greater than the MDLs.
- 17 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic and total lead concentrations exceeded the MCLs. Total aluminum, total iron, total and dissolved manganese, and total vanadium concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 35 TW-6 (16-20):

- Two VOCs (carbon disulfide and toluene) were detected at concentrations greater than the MDLs but less than applicable screening levels.
- No SVOCs were detected at concentrations greater than the MDLs.
- 13 of the 23 TAL Metals were detected at concentrations greater than the MDLs but less than applicable screening levels.
- Hexavalent chromium was not detected at concentrations greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 35 TW-7 (20-24):

- No VOCs were detected at concentrations greater than the MDLs.
- One SVOC (bis(2-ethylhexyl)phthalate) was detected at a concentration greater than MCL. No other SVOCs were detected at concentrations greater than the MDLs.
- 14 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total iron and total manganese concentration exceeded the TWSL. Other detected metal concentrations were less than applicable screening levels.
- Hexavalent chromium was not detected at concentrations greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

#### 4.9.4 Sediment Results

Tract 35 SS-1:

- Two VOCs (acetone and carbon disulfide) were detected at concentrations greater than the MDLs but less than applicable screening levels. SSVs have not been established for the detected VOCs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 17 of the 23 TAL Metals were detected at concentrations greater than the MDLs. The arsenic concentration exceeded the ISL, RSL, SSL-MCL, and SSV. Copper and lead concentrations exceeded the SSL-MCLs and SSVs. Cobalt, iron, and manganese concentrations exceeded the SSL-Taps. The zinc concentration exceeded the SSV. Other detected metal concentrations were less than screening levels.
- Hexavalent chromium was not detected at concentrations greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

Tract 35 SS-2:

- Three VOCs (acetone, benzene, and toluene) were detected at concentrations greater than the MDLs but less than applicable screening levels. SSVs have not been established for the detected VOCs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 16 of the 23 TAL Metals were detected at concentrations greater than the MDLs. The arsenic concentration exceeded the ISL, RSL, and SSL-MCL. The lead concentration exceeded the SSL-MCL and SSV. Iron and manganese concentrations exceeded the SSL-Taps. Chromium, copper, and nickel concentrations exceeded the SSVs. Other detected metal concentrations were less than screening levels.
- Hexavalent chromium was not detected at concentrations greater than the MDL.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

#### 4.9.5 Surface Water Results

Tract 35 SW-1:

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- Eight of the 23 TAL Metals were detected at concentrations greater than the MDLs but less than screening levels.
- Hexavalent chromium was detected at a concentration greater than the MDL. No screening levels are established for hexavalent chromium.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

#### 4.9.6 Discussion

Seven surficial soil samples, six subsurface soil samples, seven groundwater samples, two sediment samples, and one surface water sample were collected on Tract 35. Samples were analyzed for VOC, SVOC, TAL Metals, and PCBs. Samples collected within Shipyard Creek were also analyzed for hexavalent chromium. Based on initial analytical results, one surficial soil sample was also analyzed for TCLP lead.

One VOC (benzene) was detected at concentrations exceeding the SSL-MCL in four surficial and one subsurface soil sample. Three SVOCs (benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene) were detected at concentrations exceeding the RSLs or SSL-Taps in two surficial and one subsurface soil samples. Arsenic was detected at concentrations exceeding the ISL, RSL, and SSL-MCL in six of the surficial and four of the subsurface soil samples and at concentrations exceeding the RSL and SSL-MCL in one surficial and two of the subsurface soil samples. Other metals (barium,

beryllium, cobalt, copper, iron, lead, manganese, mercury, and selenium) were detected at concentrations exceeding the SSL-MCL/Taps in one or more of the collected soil samples. Hexavalent chromium was not detected at concentrations exceeding screening levels in the soil samples collected from Shipyard Creek.

Three pesticides (4,4'-DDT, dieldrin, and gamma-BHC (lindane)) were detected at concentrations exceeding the SSL-MCL/Taps. TCLP lead was not detected at a concentration exceeding the regulatory level.

VOCs were not detected at concentrations exceeding screening levels in the collected groundwater samples. One SVOC (bis(2-ethylhexyl)phthalate) was detected in one groundwater sample at a concentration exceeding the MCL. Five metals (arsenic, beryllium, cadmium, chromium, and lead) were detected at concentrations exceeding the MCLs. Arsenic was detected in one filtered groundwater sample at a concentration exceeding the MCL. Aluminum, cobalt, iron, manganese, and vanadium were detected at concentrations exceeding TWSLs. Manganese was detected in three laboratory filtered groundwater samples at concentrations exceeding the TWSL. Vanadium was detected in one laboratory filtered groundwater sample at a concentration exceeding the TWSL. Other metals were not detected at concentrations exceeding screening levels in the laboratory filtered groundwater samples. Hexavalent chromium, PCBs, and pesticides were not detected in the groundwater samples at concentrations exceeding screening levels.

Six metals (arsenic, chromium, copper, lead, nickel, and zinc) were detected at concentrations at concentrations exceeding the SSV. VOCs, SVOCs, hexavalent chromium, PCBs, and pesticides were not detected at concentrations exceeding screening values in the sediment samples.

VOCs, SVOCs, TAL Metals, hexavalent chromium, PCBs, and pesticides were not detected at concentrations exceeding screening levels in the collected surface water sample.

#### 4.9.7 Conclusion

Arsenic was present in soil samples at concentrations exceeding ISLs. The detected arsenic concentrations were consistent with background concentrations in South Carolina.

Bis(2-ethylhexyl)phthalate was detected in one groundwater sample at a concentration exceeding the MCL.

Based on the groundwater results for VOC, SVOC, pesticides, and PCBs and filtered groundwater results for barium, beryllium, cobalt, copper, iron, lead, mercury, and

selenium, it does not appear these parameters which were detected in the soil at concentrations exceeding the SSL-MCL/Taps have impacted site groundwater.

Four metals (beryllium, cadmium, chromium, and lead) were detected in the groundwater at concentrations exceeding the MCLs; however, concentrations of each were less than the MCLs in the filtered groundwater sample. Arsenic was detected at concentrations exceeding the MCL in both unfiltered and filtered groundwater samples collected from one monitoring well. Arsenic was not detected at a concentration greater than the MDL in the remaining filtered groundwater samples.

Six metals (arsenic, chromium, copper, lead, nickel, and zinc) were detected at concentrations exceeding the SSV in the sediment samples.

#### **4.10 Tract 37 – Former Montenay Incinerator**

##### **4.10.1 Site Background**

Tract 37 (Charleston County TMS # 469-00-00-006), is listed on the SHWS/LF and AST databases. The Charleston County incinerator previously operated on Tract 37. Petroleum products were used and stored onsite. A 1986 General Engineering Laboratories (GEL) Groundwater Assessment Report of the incinerator property reported volatile organic compounds in the groundwater.

Support roads for the new port will require right-of-way from Tract 37. Based on the historical use of the property, the site was assessed for VOC, SVOC, TAL Metals, and Dioxins/Furans.

Surficial and subsurface soil samples were collected from three borings (Tract 37 SB-1, Tract 37 SB-2, and Tract 37 SB-3) for laboratory analysis. The subsurface soil sample interval was selected based on the field screening results. Temporary monitoring wells were installed at two depth intervals in each boring. Based on field screening results, a groundwater sample was collected for laboratory analysis from temporary monitoring wells (Tract 37 TW-1 (20-24), Tract 37 TW-2 (10-14), and Tract 37 TW-3 (10-14)).

A surface water (Tract 37 SW-1) and sediment (Tract 37 SS-1) sample were collected from the pond located on the northeastern corner of Tract 37.

##### **4.10.2 Soil Results**

###### Tract 37 SB-1 (0-2):

- One VOC (acetone) was detected at a concentration greater than the MDL but less than applicable screening levels.
- No SVOCs were detected at concentrations greater than the MDLs.
- 13 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron and

manganese concentrations exceeded the SSL-Taps. Other detected metal concentrations were less than applicable screening levels.

- Six dioxins/furans were detected at concentrations greater than the EDLs but less than applicable screening values. The total dioxin/furan TEQ was less than the screening levels.

Tract 37 SB-1 (22-26):

- 11 VOCs were detected at concentrations greater than the MDLs. Vinyl chloride concentration exceeded the RSL and SSL-MCL. Benzene, cis-1,2-dichloroethene, and trichloroethene concentrations exceeded the SSL-MCLs. Other detected VOC concentrations (acetone, 2-butanone, cyclohexane, methylcyclohexane, ethylbenzene, toluene, and xylenes) were less than screening levels.
- No SVOCs were detected at concentrations greater than the MDLs.
- 18 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cadmium, cobalt, iron, and manganese concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- Three dioxins/furans were detected at concentrations greater than EDLs but less than applicable screening values. The total dioxin/furan TEQ was less than the screening levels.

Tract 37 SB-2 (0-2):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 16 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cadmium, iron, lead, and manganese concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening levels.
- Seventeen dioxins/furans were detected at concentrations greater than EDLs. 1,2,3,6,7,8-HxCDD and 1,2,3,7,8,9-HxCDD concentrations exceeded the SSL-Taps. Other detected dioxins/furans concentrations were less than applicable screening values. The total dioxin/furan TEQ exceeded the RSL and SSL-MCL.

Tract 37 SB-2 (8-12):

- One VOC (acetone) was detected at a concentration greater than the MDL but less than applicable screening levels.
- No SVOCs were detected at concentrations greater than the MDLs.
- 14 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron concentration exceeded the SSL-Tap. Other detected metal concentrations were less than applicable screening levels.

- Fifteen dioxins/furans were detected at concentrations greater than EDLs but less than applicable screening values. The total dioxin/furan TEQ was less than the screening levels.

Tract 37 SB-3 (0-2):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 16 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the RSL and SSL-MCL. Cobalt, iron, and manganese concentrations exceeded the SSL-Taps. Other detected metal concentrations were less than applicable screening levels.
- Sixteen dioxins/furans were detected at concentrations greater than EDLs but less than applicable screening values. The total dioxin/furan TEQ was less than the screening levels.

Tract 37 SB-3 (8-12):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 14 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cobalt and iron concentrations exceeded the SSL-Taps. Other detected metal concentrations were less than applicable screening levels.
- Three dioxins/furans were detected at concentrations greater than EDLs but less than applicable screening values. The total dioxin/furan TEQ was less than the screening levels.

#### 4.10.3 Groundwater Results

Tract 37 TW-1 (20-24):

- Eight VOCs were detected at concentrations greater than the MDLs. Cis-1,2-dichloroethene, trichloroethene, and vinyl chloride concentrations exceeded the MCLs. 1,1-Dichloroethane concentration exceeded the TWSL. Other detected VOC (1,2-dichlorobenzene, 1,1-dichloroethene, trans-1,2-dichloroethene, and toluene) concentrations were less than applicable screening levels.
- No SVOCs were detected at concentrations greater than the MDLs.
- 15 of the 23 TAL Metals were detected at concentrations greater than the MDLs but less than applicable screening values.
- Five dioxins/furans were detected at concentrations greater than EDLs but less than applicable screening values. The total dioxin/furan TEQ was less than the MCL.

Tract 37 TW-2 (10-14):

- Two VOCs (cis-1,2-dichloroethene and toluene) were detected at concentrations greater than the MDLs but less than applicable screening levels.
- No SVOCs were detected at concentrations greater than the MDLs.
- 17 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic concentration exceeded the MCL. Total and dissolved cobalt, total iron, and total and dissolved manganese concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening levels.
- One of the dioxins/furans was detected at a concentration greater than the EDL. Screening levels have not been established for the detected parameter. The total dioxin/furan TEQ was less than the MCL.

Tract 37 TW-3 (10-14):

- One VOC (carbon disulfide) was detected at a concentration greater than the MDL but less than applicable screening levels. No other VOCs were detected at a concentration greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 18 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic, total beryllium, and total lead concentrations exceeded the MCLs. Total aluminum, total and dissolved cobalt, total iron, total and dissolved manganese, and total vanadium concentrations exceeded TWSLs. Other detected metal concentrations were less than applicable screening levels.
- One of the dioxins/furans was detected at a concentration greater than EDL. Screening levels have not been established for the detected parameter. The total dioxin/furan TEQ was less than the MCL.

#### 4.10.4 Sediment Results

Tract 37 SS-1:

- Nine VOCs (acetone, 2-butanone, carbon disulfide, chlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, ethylbenzene, tetrachloroethene, and toluene) were detected at concentrations greater than the MDLs. The chlorobenzene concentration exceeded the SSL-MCL. Other detected VOC concentrations were less than screening levels. SSVs have not been established for the detected VOCs.
- Ten SVOCs were detected at concentrations greater than the MDLs. Benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene concentrations exceeded the RSLs and SSL-MCLs/Taps and bis(2-ethylhexyl)phthalate and fluoranthene concentrations exceeded the SSVs. Other detected SVOCs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzene(g,h,i)perylene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, and pyrene) concentrations were less than screening levels.

- 16 of the 23 TAL Metals were detected at concentrations greater than the MDLs. The arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cadmium, copper, lead, mercury, and zinc concentrations exceeded the SSL-MCLs/Taps and SSVs. Iron and manganese concentrations exceeded the SSL-Taps. The chromium concentration exceeded the SSV. Other detected metal concentrations were less than screening levels.
- 15 of the dioxins/furans were detected at concentrations greater than the EDLs but less than screening values. The total dioxin/furan TEQ exceeded the RSL and SSV.

#### 4.10.5 Surface Water Results

##### Tract 37 SW-1:

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- Eight of the 23 TAL Metals were detected at concentrations greater than the MDLs but less than screening levels.
- Two of the dioxins/furans (1,2,3,4,6,7,8-HpCDD and OCDD) were detected at concentrations greater than the EDLs. Screening levels have not been established for the detected parameters. The total dioxin/furan TEQ was less than the MCL but exceeded WQNC Consumption of Organism Only screening value.

#### 4.10.6 Discussion

Three surficial soil samples, three subsurface soil samples, three groundwater samples, one sediment sample, and one surface water sample were collected on Tract 37. Samples were analyzed for VOC, SVOC, TAL Metals, and Dioxins/Furans.

One VOC (vinyl chloride) was detected at a concentration exceeding the RSL and SSL-MCL in one subsurface soil sample. Three VOCs (benzene, cis-1,2-dichloroethene, and trichloroethene) were detected at concentrations exceeding the SSL-MCLs in one subsurface soil sample. No SVOCs were detected at concentrations exceeding screening levels in the soil samples. Arsenic was detected in five of the soil samples at concentrations exceeding the ISL, RSL, and SSL-MCL and one surficial soil sample at a concentration exceeding the RSL and SSL-MCL. Five metals (cadmium, cobalt, iron, lead, and manganese) were detected at concentrations exceeding the SSL-MCL/Taps. Two dioxins/furans (1,2,3,6,7,8-HxCDD and 1,2,3,7,8,9-HxCDD) were detected in one soil sample at concentrations exceeding the SSL-Taps. The total dioxin/furan TEQ exceeded the RSL and SSL-MCL for the individual dioxin 2,3,7,8-TCDD in one surficial soil sample.

Three VOCs (cis-1,2-dichloroethene, trichloroethene, and vinyl chloride) were detected at concentrations exceeding the MCLs in one groundwater sample. One VOC (1,1-dichloroethane) was detected at a concentration exceeding the TWSL in one groundwater sample. SVOCs were not detected in the groundwater at concentrations exceeding screening values. Three metals (arsenic, beryllium, and lead) were detected in one or more of the groundwater samples at concentrations exceeding the MCLs. Aluminum, cobalt, iron, manganese, and vanadium were detected in one or more of the groundwater samples at concentrations exceeding the TWSLs. Cobalt and manganese were detected in two of the laboratory filtered groundwater samples at concentrations exceeding the TWSLs. Other metals were not detected at concentrations exceeding screening levels in the laboratory filtered groundwater samples. No dioxins/furans were detected in the groundwater at concentrations exceeding screening levels. The total dioxin/furan TEQ was less than the MCL for the individual dioxin 2,3,7,8-TCDD in each of the groundwater samples.

VOCs were not detected at concentrations exceeding screening levels in the collected sediment sample. Two SVOCs (bis(2-ethylhexyl)phthalate and fluoranthene) were detected at concentrations exceeding SSVs in the groundwater sample. Six metals (cadmium, chromium, copper, lead, mercury, and zinc) were detected at concentrations exceeding SSVs in the sediment sample. No dioxins/furans were detected in the sediment at concentrations exceeding screening levels. The total dioxin/furan TEQ exceeded the RSL and SSV for the individual dioxin 2,3,7,8-TCDD in the sediment sample.

VOCs, SVOCs, TAL Metals, and dioxins/furans were not detected at concentrations exceeding screening levels in the collected surface water sample. The total dioxin/furan TEQ was less than the MCL but exceeded Consumption of Organism Only screening values for the individual dioxin 2,3,7,8-TCDD in the surface water sample.

#### 4.10.7 Conclusion

Arsenic was present in soil samples at concentrations exceeding ISLs. The detected arsenic concentrations were consistent with background concentrations in South Carolina.

Three VOCs (cis-1,2-dichloropropene, trichloroethene, and vinyl chloride) were detected in one groundwater sample at a concentrations exceeding the MCL.

Three metals (arsenic, beryllium, and lead) were detected in the groundwater at concentrations exceeding the MCLs; however, concentrations of each were less than the MCLs in the filtered groundwater sample.

Based on the groundwater results for VOC and dioxins/furans and filtered groundwater results for arsenic, cadmium, iron, and lead, it does not appear these parameters which

were detected in the soil at concentrations exceeding the SSL-MCL/Taps have impacted site groundwater.

Two SVOCs (bis(2-ethylhexyl)phthalate and fluoranthene) and six metals (cadmium, chromium, copper, lead, mercury, and zinc) were detected at concentrations at concentrations exceeding the SSV in the sediment sample.

The total dioxin/furan TEQ exceeded the Consumption of Organism Only screening values for the individual dioxin 2,3,7,8-TCDD in the surface water sample.

#### **4.11 Tract 40 – Former Tri-State Landfill (Park South)**

##### **4.11.1 Site Background**

Tract 40 (Charleston County TMS # 469-04-00-013) is part of the Former Tri-State Landfill that operated in the 1960s and 1970s.

Roads to support the new port will require right-of-way from Tract 40. Based on the historical use of the property, the site was assessed for VOC, SVOC, TAL Metals, PCBs, and pesticides.

Surficial and subsurface soil samples were collected from one boring (Tract 40 SB-1) for laboratory analysis. The subsurface soil sample interval was selected based on the field screening results. Temporary monitoring wells were installed at three depth intervals. Based on field screening results, a groundwater sample was collected for laboratory analysis from temporary monitoring well (Tract 40 TW-1 (4-8)).

##### **4.11.2 Soil Results**

###### Tract 40 SB-1 (0-2):

- One VOC (1,2-dichloroethane) was detected at a concentration greater than the MDL but less than screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 13 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron concentration exceeded the SSL-Tap. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

###### Tract 40 SB-1 (4-8):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 14 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the RSL and SSL-MCL. Iron concentration

exceeded the SSL-Tap. Other detected metal concentrations were less than applicable screening values.

- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

#### 4.11.3 Groundwater Results

##### Tract 40 TW-1 (4-8):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDL.
- 18 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic, total beryllium, and total lead concentrations exceeded the MCLs. Total aluminum, total cobalt, total iron, total manganese, and total vanadium concentrations exceeded TWSLs. Other detected metal concentrations were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- One pesticide (dieldrin) concentration exceeded the TWSL. No other pesticides were detected at concentrations greater than the MDLs.

#### 4.11.4 Discussion

One surficial soil sample, one subsurface soil sample, and one groundwater sample were collected on Tract 40. Samples were analyzed for VOC, SVOC, TAL Metals, PCBs, and pesticides.

No VOCs or SVOCs were detected at concentrations exceeding screening values in the soil samples. Arsenic was detected at a concentration exceeding the ISL, RSL, and SSL-MCL in the surficial soil sample and at a concentration exceeding the RSL and SSL-MCL in the subsurface soil sample. Iron was detected at concentrations exceeding the SSL-Tap in both soil samples. No PCBs or pesticides were detected in the soil samples at concentrations exceeding screening levels.

No VOCs or SVOCs were detected at concentrations exceeding screening levels in the groundwater sample. Three metals (arsenic, beryllium, and lead) were detected at concentrations exceeding MCLs. Aluminum, cobalt, iron, manganese, and vanadium were detected at concentrations exceeding TWSLs. Metals were not detected in the filtered groundwater samples at concentrations exceeding screening levels. PCBs were not detected at concentrations exceeding screening levels in the collected groundwater sample. One pesticide (dieldrin) was detected at a concentration exceeding the TWSL.

#### 4.11.5 Conclusion

Arsenic was present in soil samples at concentrations exceeding ISLs. The detected arsenic concentrations were consistent with background concentrations in South Carolina.

Based on the filtered groundwater results for arsenic and iron, it does not appear these parameters which were detected in the soil at concentrations exceeding the SSL-MCL/Taps have impacted site groundwater.

Three metals (arsenic, beryllium, and lead) were detected in the groundwater at concentrations exceeding the MCLs; however, concentrations of each were less than the MCLs in the filtered groundwater sample.

## **4.12 Tract 44 – Former Tri-State Landfill (Stromboli)**

### **4.12.1 Site Background**

Tract 44 (Charleston County TMS # 466-03-00-166) is part of the Former Tri-State Landfill that operated in the 1960s and 1970s.

Roads to support the new port will require right-of-way from Tract 44. Based on the historical use of the property, the site was assessed for VOC, SVOC, TAL Metals, PCBs, and pesticides.

On January 27, 2012, surficial and subsurface soil samples were collected from one boring (Tract 44 SB-1) for laboratory analysis. The subsurface soil sample interval was selected based on the field screening results. Temporary monitoring wells were installed at three depth intervals. Based on field screening results, a groundwater sample was collected for laboratory analysis from temporary monitoring well (Tract 44 TW-1 (4-8)). Due to underground utilities located in the proposed right-of-way to be acquired on Tract 44, the soil boring and temporary wells for Tract 44 were installed on Tract 43, which is located directly across Stromboli Avenue from Tract 44.

### **4.12.2 Soil Results**

#### Tract 44 SB-1 (0-2):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 13 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the RSL and SSL-MCL. Iron concentration exceeded the SSL-Tap. Other detected metal concentrations were less than applicable screening values.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

#### Tract 44 SB-1 (6-10):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 14 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron concentration exceeded the SSL-Tap. Other detected metal concentrations were less than applicable screening values.

- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

#### 4.12.3 Groundwater Results

##### Tract 44 TW-1 (4-8):

- One VOC (toluene) was detected at a concentration greater than the MDL but less than applicable screening values.
- Four SVOCs (acenaphthene, fluoranthene, fluorene, and phenanthrene) were detected at concentrations greater than the MDLs but less than applicable screening levels.
- 18 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total and dissolved arsenic, total and dissolved beryllium, dissolved chromium, and dissolved lead concentrations exceeded the MCLs. Dissolved aluminum, total and dissolved cobalt, total and dissolved iron, total and dissolved manganese, and dissolved vanadium concentrations exceeded the TWSLs. Other detected metal concentrations were less than applicable screening levels.
- No PCBs were detected at concentrations greater than the MDLs.
- No pesticides were detected at concentrations greater than the MDLs.

#### 4.12.4 Discussion

One surficial soil sample, one subsurface soil sample, and one groundwater sample were collected as part of the assessment of Tract 44. Samples were analyzed for VOC, SVOC, TAL Metals, PCBs, and pesticides.

No VOCs or SVOCs were detected at concentrations exceeding screening values in the soil samples. Arsenic was detected at concentrations exceeding the ISL, RSL, and SSL-MCL. Iron was detected at concentrations exceeding the SSL-Tap. No PCBs or pesticides were detected in the soil samples at concentrations exceeding screening levels.

No VOCs or SVOCs were detected at concentrations exceeding screening values in the groundwater sample. Total arsenic and total beryllium were detected at concentrations exceeding the MCLs. Dissolved arsenic, dissolved beryllium, dissolved chromium, and dissolved lead were detected at concentrations exceeding the MCLs. Total cobalt, total iron, and total manganese were detected at concentrations exceeding the TWSLs. Dissolved aluminum, dissolved cobalt, dissolved iron, dissolved manganese, and dissolved vanadium were detected at concentrations exceeding the TWSLs. PCBs and pesticides were not detected at concentrations exceeding screening levels in the collected groundwater sample.

#### 4.12.5 Conclusion

Arsenic was present in soil samples at concentrations exceeding ISLs. The detected arsenic concentrations were consistent with background concentrations in South Carolina.

Two metals (arsenic and beryllium) were detected in the unfiltered groundwater at concentrations exceeding the MCLs. Four metals (arsenic, beryllium, chromium, and lead) were detected in the filtered groundwater at concentrations exceeding MCLs.

### 4.13 Tract 45 – CC South Site

#### 4.13.1 Site Background

Tract 45 (Charleston County TMS # 466-08-00-455) is listed on the UST database for one diesel tank that was removed from the ground in 1984. The Former Tri-State Landfill is located on the northern adjoining property. Tract 46, the western adjoining property, previously operated USTs and is listed on the UST, LUST, and GWCI databases under the name Southern Bell.

Roads to support the new port will require right-of-way from Tract 45. Based on the previous UST located on the property and the former use of the adjoining properties, the site was assessed for VOC, SVOC, and TAL Metals.

On December 9, 2011, surficial and subsurface soil samples were collected from one boring (Tract 45 SB-1) for laboratory analysis. The subsurface soil sample interval was selected based on the field screening results. Temporary monitoring wells were installed at three depth intervals. Based on field screening results, a groundwater sample was collected for laboratory analysis from temporary monitoring well (Tract 45 TW-1 (17-21)).

#### 4.13.2 Soil Results

##### Tract 45 SB-1 (0-2):

- One VOC (acetone) was detected at a concentration greater than the MDL but less than screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 15 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron, lead, and manganese concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.

##### Tract 45 SB-1 (14-18):

- Two VOCs (acetone and carbon disulfide) were detected at concentrations greater than the MDLs but less than applicable screening values.
- One SVOC (naphthalene) was detected at concentrations greater than the SSL-Tap. No other SVOCs were detected at concentrations greater than the MDLs.
- 16 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cobalt, iron, and

manganese concentrations exceeded the SSL-Taps. Other detected metal concentrations were less than applicable screening values.

#### 4.13.3 Groundwater Results

##### Tract 45 TW-1 (17-21):

- One VOC (benzene) was detected at a concentration greater than the MDL but less than the MCL. No other VOCs were detected at concentrations greater than the MDLs.
- One SVOC (naphthalene) was detected at a concentration exceeding the TWSL. No other SVOCs were detected at concentrations greater than the MDLs.
- 16 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic, total cadmium, total chromium, and total lead concentrations exceeded the MCLs. Total aluminum, total iron, total manganese, and total vanadium concentrations exceeded the TWSLs. Other detected metal concentrations were less than screening values.

#### 4.13.4 Discussion

One surficial soil sample, one subsurface soil sample, and one groundwater sample were collected on Tract 45. Samples were analyzed for VOC, SVOC, and TAL Metals.

No VOCs were detected at concentrations exceeding screening values in the soil samples. One SVOC (naphthalene) was detected in the subsurface sample at a concentration exceeding the SSL-Tap. Arsenic was detected at concentrations exceeding the ISL, RSL, and SSL-MCL. Cobalt, iron, lead, and manganese were detected at concentrations exceeding the SSL-MCL/Taps.

No VOCs were detected at concentrations exceeding screening levels in the groundwater sample. One SVOC (naphthalene) was detected a concentration exceeding the TWSL. Arsenic, cadmium, chromium, and lead were detected at concentrations exceeding the MCLs. Aluminum, iron, manganese, and vanadium were detected at concentrations exceeding the TWSLs. Metals were not detected in the filtered groundwater samples at concentrations exceeding screening levels.

#### 4.13.5 Conclusion

Arsenic was present in soil samples at concentrations exceeding ISLs. The detected arsenic concentrations were consistent with background concentrations in South Carolina.

Naphthalene was detected in the subsurface soil at concentrations exceeding the SSL-Taps. The naphthalene concentration exceeded the TWSLs in the collected groundwater sample. There is no MCL listed for naphthalene.

Based on the filtered groundwater results for arsenic, cobalt, iron, lead, and manganese, it does not appear these parameters which were detected in the soil at concentrations exceeding the SSL-MCL/Taps have impacted site groundwater.

Four metals (arsenic, cadmium, chromium, and lead) were detected in the groundwater at concentrations exceeding the MCLs; however, concentrations of each were less than the MCLs in the filtered groundwater sample.

#### **4.14 Tract 57 – Former Retail Petroleum Station**

##### **4.14.1 Site Background**

Tract 57 (Charleston County TMS # 466-08-00-421) was developed as a filling (retail petroleum) station on the 1912 and 1951 Sanborn Maps.

Roads to support the new port will require right-of-way from Tract 57. Based on the historical use of the property, the site was assessed for VOC, SVOC, and TAL Metals.

On December 8, 2011, surficial and subsurface soil samples were collected from one boring (Tract 57 SB-1) for laboratory analysis. The subsurface soil sample interval was selected based on the field screening results. Temporary monitoring wells were installed at two depth intervals. Based on field screening results, a groundwater sample was collected for laboratory analysis from temporary monitoring well (Tract 57 TW-1 (8-12)).

##### **4.14.2 Soil Results**

###### Tract 57 SB-1 (0-2):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 14 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the RSL and SSL-MCL. Iron, lead, and manganese concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.

###### Tract 57 SB-1 (6-10):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 14 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the RSL and SSL-MCL. Iron and mercury concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening values.

##### **4.14.3 Groundwater Results**

###### Tract 57 TW-1 (8-12):

- No VOCs were detected at concentrations greater than the MDLs.

- No SVOCs detected at concentrations greater than the MDLs.
- 17 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic, total cadmium, total chromium, and total lead concentrations exceeded the MCLs. Total aluminum, total iron, total manganese, and total vanadium concentrations exceeded TWSLs. Other detected metal concentrations were less than screening values.

#### 4.14.4 Discussion

One surficial soil sample, one subsurface soil sample, and one groundwater sample were collected on Tract 57. Samples were analyzed for VOC, SVOC, and TAL Metals.

No VOCs or SVOCs were detected at concentrations exceeding screening values in the soil samples. Arsenic was detected in both soil samples at concentrations exceeding the RSL and SSL-MCL. Iron, lead, and manganese were detected at concentrations exceeding SSL-MCL/Taps.

No VOCs or SVOCs were detected at concentrations exceeding screening levels in the groundwater sample. Arsenic, cadmium, chromium, and lead were detected at concentrations exceeding the MCLs. Aluminum, iron, manganese, mercury, and vanadium were detected at concentrations exceeding the TWSLs. Metals were not detected in the filtered groundwater sample at concentrations exceeding screening levels.

#### 4.14.5 Conclusion

Based on the filtered groundwater results for arsenic, iron, lead, and manganese, it does not appear these parameters which were detected in the soil at concentrations exceeding the SSL-MCL/Taps have impacted site groundwater.

Four metals (arsenic, cadmium, chromium, and lead) were detected in the groundwater at concentrations exceeding the MCLs; however, concentrations of each were less than the MCLs in the filtered groundwater sample.

### **4.15 Tract 62 – Former Automobile Junk Yard**

#### 4.15.1 Site Background

Tract 62 (Charleston County TMS # 466-03-00-002) was previously part of an automobile junk yard.

Roads to support the new port will require right-of-way from Tract 62. Based on the historical use of the property, the site was assessed for VOC, SVOC, and TAL Metals.

Surficial and subsurface soil samples were collected from one boring (Tract 62 SB-1) for laboratory analysis. The subsurface soil sample interval was selected based on the field

screening results. Temporary monitoring wells were installed at two depth intervals. Based on field screening results, a groundwater sample was collected for laboratory analysis from temporary monitoring well (Tract 62 TW-1 (8-12)).

#### 4.15.2 Soil Results

##### Tract 62 SB-1 (0-2):

- No VOCs were detected at concentrations greater than the MDLs.
- One SVOC (butyl benzyl phthalate) was detected at a concentration exceeding the SSL-Tap. No other SVOCs were detected at concentrations greater than the MDLs.
- 15 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron, lead, manganese, and mercury concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.

##### Tract 62 SB-1 (4-8):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 15 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Iron, lead, and manganese concentrations exceeded the SSL-MCL/Taps. Other detected metal concentrations were less than applicable screening values.

#### 4.15.3 Groundwater Results

##### Tract 62 TW-1 (8-12):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 15 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Total arsenic concentration was equal to the MCL. Total cobalt concentration exceeded the TWSL. Other detected metal concentrations were less than screening values.

#### 4.15.4 Discussion

One surficial soil sample, one subsurface soil sample, and one groundwater sample were collected on Tract 62. Samples were analyzed for VOC, SVOC, and TAL Metals.

No VOCs were detected at concentrations exceeding screening values in the soil samples. One SVOC (butyl benzyl phthalate) was detected at a concentration exceeding the SSL/Tap. Arsenic was detected at concentrations at concentrations exceeding the ISL, RSL, and SSL-MCL. Iron, lead, manganese, and mercury were detected at concentrations exceeding SSL-MCL/Taps.

No VOCs or SVOCs were detected at concentrations exceeding screening levels in the groundwater sample. Arsenic was detected at a concentration exceeding the MCL. Cobalt and iron were detected at concentrations exceeding the TWSLs. Metals were not detected in the filtered groundwater sample at concentrations exceeding screening levels.

#### 4.15.5 Conclusion

Arsenic was present in soil samples at concentrations exceeding ISLs. The detected arsenic concentrations were consistent with background concentrations in South Carolina.

Based on the groundwater results for butyl benzyl phthalate and filtered groundwater results for arsenic, iron, lead, manganese, and mercury, it does not appear these parameters which were detected in the soil at concentrations exceeding the SSL-MCL/Taps have impacted site groundwater.

One metal (arsenic) was detected in the groundwater at a concentration exceeding the MCL; however, the concentration was less than the MCL in the filtered groundwater sample.

### 4.16 Tract 67 – Calvary AME Church Lot

#### 4.16.1 Site Background

The northern, off-site portion of Tract 67 (Charleston County TMS # 466-07-00-001) was historically used as a filling (retail petroleum) station, auto repair shops, and a junk yard.

Roads to support the new port will require right-of-way from Tract 67. Based on the historical use of the surrounding property, the site was assessed for VOC, SVOC, and TAL Metals. Based on initial analytical results, Tract 67 SB-1 (0-2) soil sample was also analyzed for TCLP lead.

Surficial and subsurface soil samples were collected from one boring (Tract 67 SB-1) for laboratory analysis. The subsurface soil sample interval was selected based on the field screening results. Temporary monitoring wells were installed at three depth intervals. Based on field screening results, a groundwater sample was collected for laboratory analysis from temporary monitoring well (Tract 67 TW-1 (8-12)).

#### 4.16.2 Soil Results

##### Tract 67 SB-1 (0-2):

- Three VOCs (acetone, benzene, and toluene) were detected at concentrations greater than the MDLs but less than applicable screening values.
- 14 SVOCs were detected at concentrations greater than the MDLs. Benzo(a)pyrene and dibenz(a,h)anthracene concentrations exceeded the ISLs, RSLs, and SSL-MCLs. Benzo(a)anthracene, benzo(b)fluoranthene, and indeno(1,2,3-cd)pyrene concentrations exceeded the RSLs. Benzo(k)fluoranthene

concentration exceeded SSL-Tap. Other detected SVOC concentrations (acenaphthylene, anthracene, benzo(g,h,i)perylene, chrysene, fluoranthene, 2-methylnaphthalene, phenanthrene, and pyrene) were less than applicable screening values.

- 16 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cadmium, copper, iron, lead, manganese, and mercury concentrations exceeded the SSL-MCL/Tap. Other detected metal concentrations were less than applicable screening values.
- TCLP lead concentration was the less than the regulatory level.

Tract 67 SB-1 (28-32):

- One VOC (acetone) was detected at a concentration greater than the MDL but less than applicable screening values.
- No SVOCs were detected at concentrations greater than the MDLs.
- 16 of the 23 TAL Metals were detected at concentrations greater than the MDLs. Arsenic concentration exceeded the ISL, RSL, and SSL-MCL. Cobalt, iron, and manganese concentrations exceeded the SSL-Taps. Other detected metal concentrations were less than applicable screening values.

#### 4.16.3 Groundwater Results

Tract 67 TW-1 (8-12):

- No VOCs were detected at concentrations greater than the MDLs.
- No SVOCs were detected at concentrations greater than the MDLs.
- 13 of the 23 TAL Metals were detected at concentrations greater than the MDLs but less than applicable screening values.

#### 4.16.4 Discussion

One surficial soil sample, one subsurface soil sample, and one groundwater sample were collected on Tract 67. Samples were analyzed for VOC, SVOC, and TAL Metals. Based on initial analytical results, the surficial soil sample was also analyzed for TCLP lead.

No VOCs were detected at concentrations exceeding the screening levels in the soil samples. Two SVOCs (benzo(a)pyrene and dibenz(a,h)anthracene) were detected in the surficial soil sample at concentrations exceeding the ISLs, RSLs, and SSL-MCLs. Three SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, and indeno(1,2,3-cd)pyrene) were detected in the surficial soil sample at a concentration exceeding the RSLs. One SVOC (benzo(k)fluoranthene) was detected at a concentration exceeding the SSL-Tap. Arsenic was detected at concentrations exceeding the ISL, RSL, and SSL-MCL in the surficial and subsurface soil samples. Cadmium, cobalt, copper, iron, lead, manganese, and mercury were detected in soil at concentrations exceeding the SSL-MCL/Taps. TCLP lead concentration was less than the regulatory screening level.

No VOCs, SVOCs, or Metals were detected at concentrations exceeding screening levels in the groundwater sample.

#### 4.16.5 Conclusion

Arsenic was present in soil samples at concentrations exceeding ISLs. The detected arsenic concentrations were consistent with background concentrations in South Carolina.

Two SVOCs (benzo(a)pyrene and dibenz(a,h)anthracene) were detected in the surficial soil sample at concentrations exceeding the ISLs.

Based on the groundwater results for SVOCs and metals, it does not appear these parameters which were detected in the soil at concentrations exceeding the SSL-MCL/Taps have impacted site groundwater.

#### 4.17 Trip Blank Results

Trip blanks provided by the laboratory were stored with samples collected during the sampling events to determine if samples were contaminated during storage and/or shipment. A trip blank was maintained in each sample cooler containing VOC samples and was analyzed for VOCs.

Thirty-five trip blank samples were analyzed as part of this assessment. No VOCs were detected in the samples at concentrations exceeding screening levels.

### 5. LIMITATIONS

Environmental assessments are inherently constrained in the sense that conclusions and recommendations are developed from information obtained from limited research and site evaluation. The laboratory analytical results are representative of conditions that existed on the date these samples were collected. Conclusions about the site conditions under no circumstances comprise a warranty that conditions in all areas within the site are of the same quality as those sampled. In addition, contamination may exist in forms not indicated by the limited assessment. Changes in regulations, interpretations, and/or enforcement policies may occur at any time and such changes could affect our conclusions.

**Table 2**  
**Summary of Soil Analytical Data - Volatile Organic Compounds**  
**Port Access Road; North Charleston, South Carolina**  
**S&ME Project Number 1134-08-554**

Notes:

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in milligrams per kilogram.

Blue text indicates exceedance of screening level.

1. Industrial Screening Level for soil obtained from the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table dated January 2015 (SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.
2. Residential Screening Level for soil from the SL Table. Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.
3. Soil Screening Level (SSL) for the protection of groundwater based on the maximum contaminant level (MCL) for drinking water (from the SL Table). The SSL-MCL, if listed, supercedes the SSL-Tap.
4. Soil Screening Level (SSL) for the protection of groundwater based on tap water (risk-based) screening level for drinking water (from the SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1 and a dilution attenuation factor of 1.

"NA" indicates specific parameter not analyzed.

"RL1" qualifier indicates parameter reporting limit raised due to sample matrix effects.

"L" qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected. Data not impacted.

"J" qualifier indicates analyte detected at a level less than the Reporting Limit and greater than or equal to the Method Detection Limit. Concentrations within this range are estimated.

"M8" qualifier indicates the Matrix Spike and/or Matrix Spike Duplicate were below the acceptance limits.

"L1" qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above acceptance limits.

"B" qualifier indicates the compound was detected in the blank and sample.

\*\*\* qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate exceeds the control limits.

"H" qualifier indicates sample was prepped or analyzed beyond the specified holding time.

**Table 3**

**Summary of Soil Analytical Data - Semi Volatile Organic Compounds  
Port Access Road; North Charleston, South Carolina  
S&ME Project Number 1131-08-554**

Notes:

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in milligrams per kilogram.

Blue text indicates exceedance of screening level.

1. Industrial Screening Level for soil obtained from the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table dated January 2015 (SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.
2. Residential Screening Level for soil from the SL Table. Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.
3. Soil Screening Level (SSL) for the protection of groundwater based on the maximum contaminant level (MCL) for drinking water (from the SL Table). The SSL-MCL, if listed, supercedes the SSL-Tap.
4. Soil Screening Level (SSL) for the protection of groundwater based on tap water (risk-based) screening level for drinking water (from the SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1 and a dilution attenuation factor of 1.

\*NE\* indicates specific screening level not listed.

\*NA\* indicates specific parameter not analyzed.

\*RL1\* qualifier indicates parameter reporting limit raised due to sample matrix effects.

\*L\* qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected. Data not impacted.

\*J\* qualifier indicates analyte detected at a level less than the Reporting Limit and greater than or equal to the Method Detection Limit. Concentrations within this range are estimated.

\*B\* qualifier indicates the compound was detected in the blank and sample.

\*\*\* qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate exceeds the control limits.

**Summary of Soil Analytical Data - TAL Metals**  
**Port Access Road; North Charleston, South Carolina**  
**S&ME Project Number 1131-08-554**

Notes:

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in milligrams per kilogram.

Blue text indicates exceedance of screening level.

1. Industrial Screening Level for soil obtained from the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table dated January 2015 (SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.
2. Residential Screening Level for soil from the SL Table. Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.
3. Soil Screening Level (SSL) for the protection of groundwater based on the maximum contaminant level (MCL) for drinking water (from the SL Table). The SSL-MCL, if listed, supercedes the SSL-Tap.
4. Soil Screening Level (SSL) for the protection of groundwater based on tap water (risk-based) screening level for drinking water (from the SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1 and a dilution attenuation factor of 1.

"NE" indicates specific screening level not listed.

"NA" indicates specific parameter not analyzed.

"MHA" qualifier indicates the Matrix Spike/Matrix Spike Duplicate calculation does not provide useful spike recovery information due to high levels of analyte in the sample.

"J" qualifier indicates analyte detected at a level less than the Reporting Limit and greater than or equal to the Method Detection Limit. Concentrations within this range are estimated.

"M8" qualifier indicates the Matrix Spike and/or Matrix Spike Duplicate were below the acceptance limits.

"B" qualifier indicates the compound was detected in the blank and sample.

\*\*\* qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate exceeds the control limits.

"B1" qualifier indicates parameter was detected in the associated Method Blank and the parameter concentration in the sample is greater than 10 times the concentration found in the Method Blank.

"M7" qualifier indicates the Matrix Spike and/or Matrix Spike Duplicate were above the acceptance limits.

**Table 5**  
**Summary of Soil Analytical Data - PCBs**  
**Port Access Road; North Charleston, South Carolina**  
**S&ME Project Number 1131-08-554**

Notes:

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in milligrams per kilogram.

Blue text indicates exceedance of screening level.

1. Industrial Screening Level for soil obtained from the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table dated January 2015 (SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.
2. Residential Screening Level for soil from the SL Table. Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.
3. Soil Screening Level (SSL) for the protection of groundwater based on the maximum contaminant level (MCL) for drinking water (from the SL Table). The SSL-MCL is based on the MCL for Total PCBs. The SSL-MCL, if listed, supercedes the SSL-Tap.
4. Soil Screening Level (SSL) for the protection of groundwater based on tap water (risk-based) screening level for drinking water (from the SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1 and a dilution attenuation factor of 1.

"NE" indicates specific screening level not listed.

"J" qualifier indicates analyte detected at a level less than the Reporting Limit and greater than or equal to the Method Detection Limit. Concentrations within this range are estimated.

\*\*\* qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate exceeds the control limits.

**Table 6**  
**Summary of Soil Analytical Data - Pesticides**  
**Port Access Road; North Charleston, South Carolina**  
**S&ME Project Number 1131-08-554**

Notes:

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in milligrams per kilogram.

Blue text indicate exceedance of screening level.

1. Industrial Screening Level for soil obtained from the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table dated January 2015 (SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.
2. Residential Screening Level for soil from the SL Table. Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.
3. Soil Screening Level (SSL) for the protection of groundwater based on the maximum contaminant level (MCL) for drinking water (from the SL Table). The SSL-MCL, if listed, supercedes the SSL-Tap.
4. Soil Screening Level (SSL) for the protection of groundwater based on tap water (risk-based) screening level for drinking water (from the SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1 and a dilution attenuation factor of 1.

"NE" indicates specific screening level not listed.

"NA" indicates specific parameter not analyzed.

"QSU" indicates sulfur (EPA 3660) clean-up performed on extract.

"RL1" qualifier indicates parameter reporting limit raised due to sample matrix effects.

"J" qualifier indicates analyte detected at a level less than the Reporting Limit and greater than or equal to the Method Detection Limit. Concentrations within this range are estimated.

"p" indicates the %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

\*\*\* qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate exceeds the control limits.

Notes:  
Results are in picograms per gram.  
Blue text indicates exceedance of screening level.  
1. Industrial Screening Level for soil obtained from the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table dated January 2015 (SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.  
2. Residential Screening Level for soil from the SL Table. Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.  
3. Soil Screening Level (SSL) for the protection of groundwater based on the maximum contaminant level (MCL) for drinking water (from the SL Table). The SSL-MCL, if listed, supercedes the SSL-Tap.  
4. Soil Screening Level (SSL) for the protection of groundwater based on tap water (risk-based) screening level for drinking water (from the SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1 and a dilution attenuation factor of 1.  
"NE" indicates specific screening level not listed.  
"ND" indicates the parameter was not detected at a concentration greater than the listed laboratory method detection limit.  
"J" qualifier indicates analyte detected at a level less than the Minimum Level and greater than or equal to the Estimated Detection Limit. Concentrations within this range are estimated.  
"Q" qualifier indicates result is the Estimated Maximum Possible Concentration (EMPC).  
"B" flag indicates the compound was detected in the blank and sample.  
Screening Levels listed for Hexachlorodibenzo-p-dioxin, mixture in the SL Table are presented for 1,2,3,6,7,8-HxCDD and 1,2,3,7,8,9-HxCDD.

**Table 9**  
**Summary of Soil Analytical Data - Toxicity Characteristics Screening**  
**Port Access Road; North Charleston, South Carolina**  
**S&ME Project Number 1131-08-554**

Notes:

Results are in milligrams per kilograms.

Blue text indicates exceedance of the Regulatory Level x 20.

1. Maximum Concentration of Contaminants for the Toxicity Characteristic listed as Table 1 of 40 CFR 261.24 dated July 1, 2011.

2. Screening Level times 20.

"NA" indicates the parameter was not analyzed

"B" qualifier indicates the compound was detected in the blank and sample.

"J" qualifier indicates analyte detected at a level less than the Reporting Limit and greater than or equal to the Method Detection Limit. Concentrations within this range are estimated.

"\*" qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate exceeds the control limits.

"RL1" qualifier indicates parameter reporting limit raised due to sample matrix effects.

"L" qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected. Data not impacted.

"p" indicates the %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

"M8" qualifier indicates the Matrix Spike and/or Matrix Spike Duplicate were below the acceptance limits.

"QSU" indicates sulfur (EPA 3660) clean-up performed on extract.

**S&ME Project Number 1131-08-554**

Notes:

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in micrograms per liter.

Blue text indicates exceedance of screening level.

1. Maximum Contaminant Level for drinking water as set forth in the South Carolina Primary Drinking Water Regulations, R.61-58. The MCL, if listed, supercedes the TWSL.

2. Tap Water Screening Level listed in the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table January 2015.

"NE" indicates specific screening level not listed.

"PV" qualifier indicates acid preservation was indicated on the sample vial; however, a pH <2 was not obtained.

"RL1" qualifier indicates parameter reporting limit raised due to sample matrix effects.

"P6" qualifier indicates sample received unpreserved, however the sample was analyzed within 7 days per EPA recommendation.

"pH" qualifier indicates pH > 2.

"A-01" qualifier indicates sample contained too much sediment to run straight.

"L1" qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above acceptance limits.

"J" qualifier indicates analyte detected at a level less than the Reporting Limit and greater than or equal to the Method Detection Limit. Concentrations within this range are estimated.

"L" qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected. Data not impacted.

"M8" qualifier indicates the Matrix Spike and/or Matrix Spike Duplicate were below the acceptance limits.

"M7" qualifier indicates the Matrix Spike and/or Matrix Spike Duplicate were above the acceptance limits.

"L2" qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was below acceptance limits.

\*\*\* qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate exceeds the control limits.

**Table 12**  
**Summary of Groundwater Analytical Data - Semi Volatile Organic Compounds**  
**Port Access Road; North Charleston, South Carolina**  
**S&ME Project Number 1131-08-554**

Notes:   Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in micrograms per liter.

Blue text indicates exceedance of screening level.

1. Maximum Contaminant Level for drinking water as set forth in the South Carolina Primary Drinking Water Regulations, R.61-58. The MCL, if listed, supercedes the TWSL.
2. Tap Water Screening Level listed in the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table January 2015.

\*NE\* indicates specific screening level not listed.

\*NA\* indicates specific parameter not analyzed.

\*J\* qualifier indicates analyte detected at a level less than the Reporting Limit and greater than or equal to the Method Detection Limit. Concentrations within this range are estimated.

\*L\* qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected. Data not impacted.

\*\*\* qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate exceeds the control limits.

\*B\* flag indicates the compound was detected in the blank and sample.

**S&ME Project Number 1131-08-554**

Notes:

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in milligrams per liter.

Blue text indicates exceedance of screening level.

1. Maximum Contaminant Level for drinking water as set forth in the South Carolina Primary Drinking Water Regulations, R.61-58. The MCL, if listed, supercedes the TWSL.
2. Tap Water Screening Level listed in the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table January 2015.

"NE" indicates specific screening level not listed.

"NA" indicates specific parameter not analyzed.

"J" qualifier indicates analyte detected at a level less than the Reporting Limit and greater than or equal to the Method Detection Limit. Concentrations within this range are estimated.

"L" qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected. Data not impacted.

"\*\*" qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate exceeds the control limits.

"MHA" qualifier indicates the Matrix Spike/Matrix Spike Duplicate calculation does not provide useful spike recovery information due to high levels of analyte in the sample.

"P7" qualifier indicates the sample was filtered by the laboratory.

"M8" qualifier indicates the Matrix Spike and/or Matrix Spike Duplicate were below the acceptance limits.

"B" qualifier indicates the compound was detected in the blank and sample.

"HT3" indicates the sample was received with insufficient holding time remaining for analysis to be performed within the method's holding time requirements.

"B1" qualifier indicates parameter was detected in the associated Method Blank and the parameter concentration in the sample is greater than 10 times the concentration found in the Method Blank.

"H" qualifier indicates sample was prepped or analyzed beyond the specified holding time.

"^" instrument related QC exceeds the control limits.

**Table 14**  
**Summary of Groundwater Analytical Data - PCBs**  
**Port Access Road; North Charleston, South Carolina**  
**S&ME Project Number 1131-08-554**

Notes:

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in micrograms per liter.

Blue text indicates exceedance of screening level.

1. Maximum Contaminant Level for drinking water as set forth in the South Carolina Primary Drinking Water Regulations, R.61-58. The listed MCL is for Total PCBs. The MCL, if listed, supercedes the TWSL.
2. Tap Water Screening Level listed in the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table January 2015.

"NE" indicates specific screening level not listed.

"QSU" indicates sulfur (EPA 3660) clean-up performed on extract.

**Table 15**  
**Summary of Groundwater Analytical Data - Pesticides**  
**Port Access Road; North Charleston, South Carolina**  
**S&ME Project Number 1131-08-554**

Notes:

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in micrograms per liter.

Blue text indicates exceedance of screening level.

1. Maximum Contaminant Level for drinking water as set forth in the South Carolina Primary Drinking Water Regulations, R.61-58. The MCL, if listed, supercedes the TWSL.
2. Tap Water Screening Level listed in the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table January 2015.

"NE" indicates specific screening level not listed.

"L" qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected. Data not impacted.

"RL1" qualifier indicates parameter reporting limit raised due to sample matrix effects.

\*\*\* qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate exceeds the control limits.

Notes:

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in picograms per liter (pg/L).

Blue text indicates exceedance of screening level.

1. Maximum Contaminant Level for drinking water as set forth in the South Carolina Primary Drinking Water Regulations, R.61-58. The MCL, if listed, supercedes the TWSL.

2. Tap Water Screening Level listed in the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table January 2015.

"ND" indicates parameter analyzed but not detected above the laboratory MDL.

"NE" indicates specific screening level not listed.

"Q" qualifier indicates result is the Estimated Maximum Possible Concentration (EMPC).

"J" qualifier indicates analyte detected at a level less than the Minimum Level and greater than or equal to the Estimated Detection Limit. Concentrations within this range are estimated.

"B" flag indicates the compound was detected in the blank and sample.

Screening Levels listed for Hexachlorodibenzo-p-dioxin, mixture in the SL Table are presented for for 1,2,3,6,7,8-HxCDD and 1,2,3,7,8,9-HxCDD.

Notes:

Results are in picocuries per liter

Blue text indicate exceedance of screening level.

1. Maximum Contaminant Level for drinking water as set forth in the South Carolina Primary Drinking Water Regulations, R.61-58.

2. USEPA proposed level for community water suppliers (water systems that serve 25 or more year-round residents) in states that develop USEPA-approved, enhanced State radon in indoor air programs (called Multimedia Mitigation Programs). There is currently no federally-enforced drinking water standard for radon. USEPA does not regulate private wells.

"NE" indicates specific screening level not listed.

"J" qualifier indicates analyte detected at a level less than the Contractual Required Detection Limit and greater than or equal to the Method Detection Limit. Concentrations within this range are estimated.

MCL listed for Radium-226 is the MCL for combined Radium-226 and Radium-228 from R.61-58.

Notes:

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in milligrams per kilograms.

Blue text indicate exceedance of screening level.

1. Industrial Screening Level for soil obtained from the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table dated January 2015 (SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.
2. Residential Screening Level for soil from the SL Table. Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.
3. Soil Screening Level (SSL) for the protection of groundwater based on the maximum contaminant level (MCL) for drinking water (from the SL Table). The SSL-MCL, if listed, supercedes the SSL-Tap.
4. Soil Screening Level (SSL) for the protection of groundwater based on tap water (risk-based) screening level for drinking water (from the SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1 and a dilution attenuation factor of 1.
5. Sediment Screening Values (SSV) for Hazardous Waste Sites (Table 3) obtained from the USEPA Supplemental Guidance to RAGS: Region 4 Bulletins, Ecological Risk Assessment. Updated November 30, 2001.

"NE" indicates specific screening level not listed.

"L" qualifier indicates the Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected. Data not impacted.

"J" qualifier indicates analyte detected at a level less than the Reporting Limit and greater than or equal to the Method Detection Limit. Concentrations within this range are estimated.

Notes:

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in milligrams per kilograms.

Blue text indicate exceedance of screening level.

1. Industrial Screening Level for soil obtained from the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table dated January 2015 (SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.

2. Residential Screening Level for soil from the SL Table. Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.

3. Soil Screening Level (SSL) for the protection of groundwater based on the maximum contaminant level (MCL) for drinking water (from the SL Table). The SSL-MCL, if listed, supercedes the SSL-Tap.

4. Soil Screening Level (SSL) for the protection of groundwater based on tap water (risk-based) screening level for drinking water (from the SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1 and a dilution attenuation factor of 1.

5. Sediment Screening Values (SSV) for Hazardous Waste Sites (Table 3) obtained from the USEPA Supplemental Guidance to RAGS: Region 4 Bulletins, Ecological Risk Assessment. Updated November 30, 2001.

"NE" indicates specific screening level not listed.

"NA" indicates specific parameter not analyzed.

"J" qualifier indicates analyte detected at a level less than the Reporting Limit and greater than or equal to the Method Detection Limit. Concentrations within this range are estimated.

Notes:

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in milligrams per kilograms.

Blue text indicate exceedance of screening level.

1. Industrial Screening Level for soil obtained from the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table dated January 2015 (SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.
2. Residential Screening Level for soil from the SL Table. Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.
3. Soil Screening Level (SSL) for the protection of groundwater based on the maximum contaminant level (MCL) for drinking water (from the SL Table). The SSL-MCL, if listed, supercedes the SSL-Tap.
4. Soil Screening Level (SSL) for the protection of groundwater based on tap water (risk-based) screening level for drinking water (from the SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1 and a dilution attenuation factor of 1.
5. Sediment Screening Values (SSV) for Hazardous Waste Sites (Table 3) obtained from the USEPA Supplemental Guidance to RAGS: Region 4 Bulletins, Ecological Risk Assessment. Updated November 30, 2001.

"NE" indicates specific screening level not listed.

"NA" indicates specific parameter not analyzed.

"J" qualifier indicates analyte detected at a level less than the Reporting Limit and greater than or equal to the Method Detection Limit. Concentrations within this range are estimated.

"B" qualifier indicates the compound was detected in the blank and sample.

"B1" qualifier indicates parameter was detected in the associated Method Blank and the parameter concentration in the sample is greater than 10 times the concentration found in the Method Blank.

Notes:

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in picograms per gram.

Blue text indicates exceedance of screening level.

1. Industrial Screening Level for soil obtained from the USEPA Regional Screening Levels for Chemical Contaminants at Superfund Sites Table dated January 2015 (SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.

2. Residential Screening Level for soil from the SL Table. Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1.

3. Soil Screening Level (SSL) for the protection of groundwater based on the maximum contaminant level (MCL) for drinking water (from the SL Table). The SSL-MCL, if listed, supercedes the SSL-Tap.

4. Soil Screening Level (SSL) for the protection of groundwater based on tap water (risk-based) screening level for drinking water (from the SL Table). Based on a target cancer risk of 1E-06 and a target non-cancer hazard quotient of 1 and a dilution attenuation factor of 1.

5. Sediment Screening Values (SSV) for Hazardous Waste Sites (Table 3) obtained from the USEPA Supplemental Guidance to RAGS: Region 4 Bulletins, Ecological Risk Assessment. Updated November 30, 2001.

"NE" indicates specific screening level not listed.

"ND" indicates the parameter was not detected at a concentration greater than the listed laboratory method detection limit.

"J" qualifier indicates analyte detected at a level less than the Minimum Level and greater than or equal to the Estimated Detection Limit. Concentrations within this range are estimated.

"Q" qualifier indicates result is the Estimated Maximum Possible Concentration (EMPC).

"B" flag indicates the compound was detected in the blank and sample.

Screening Levels listed for Hexachlorodibenzo-p-dioxin, mixture in the SL Table are presented for for 1,2,3,6,7,8-HxCDD and 1,2,3,7,8,9-HxCDD.

Notes:  
 Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in micrograms per liter.

1. Maximum Contaminant Level for drinking water as set forth in the South Carolina Primary Drinking Water Regulations, R.61-58.
2. Water Quality Numeric Criteria for the Protection of Aquatic Life and Human Health for Consumption of Water & Organism obtained from SCDHEC R.61-68, Water Classifications & Standards dated June 22, 2012.
3. Water Quality Numeric Criteria for the Protection of Aquatic Life and Human Health for Consumption of Organism Only obtained from SCDHEC R.61-68, Water Classifications & Standards dated June 22, 2012.

"NE" indicates specific screening level not listed.

Notes:

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

Results are in milligrams per liter.

1. Maximum Contaminant Level for drinking water as set forth in the South Carolina Primary Drinking Water Regulations, R.61-58.
2. Water Quality Numeric Criteria for the Protection of Aquatic Life and Human Health for Consumption of Water & Organism obtained from SCDHEC R.61-68, Water Classifications & Standards dated June 22, 2012.
3. Water Quality Numeric Criteria for the Protection of Aquatic Life and Human Health for Consumption of Organism Only obtained from SCDHEC R.61-68, Water Classifications & Standards dated June 22, 2012.

"NE" indicates specific screening level not listed.

"NA" indicates specific parameter not analyzed.

"J" qualifier indicates analyte detected at a level less than the Reporting Limit and greater than or equal to the Method Detection Limit. Concentrations within this range are estimated.

"B" qualifier indicates the compound was detected in the blank and sample.

"HT3" indicates the sample was received with insufficient holding time remaining for analysis to be performed within the method's holding time requirements.

1,2,3,4,7,8,9-HpCDF	NE	NE	NE	ND		1.4
OCDF	NE	NE	NE	ND		1.5
Total TEQ (WHO 2005)	30	NE	0.046			<b>5.4</b>

Notes:

Results are in picograms per liter (pg/L).

Gray highlight indicates the parameter was not detected above laboratory method detection limit (MDL), but the MDL exceeds one or more of the screening values.

1. Maximum Contaminant Level for drinking water as set forth in the South Carolina Primary Drinking Water Regulations, R.61-58.
  2. Water Quality Numeric Criteria for the Protection of Aquatic Life and Human Health for Consumption of Water & Organism obtained from SCDHEC R.61-68, Water Classifications & Standards dated June 22, 2012.
  3. Water Quality Numeric Criteria for the Protection of Aquatic Life and Human Health for Consumption of Organism Only obtained from SCDHEC R.61-68, Water Classifications & Standards dated June 22, 2012.
- "NE" indicates specific screening level not established.  
 "ND" indicates parameter analyzed but not detected above the laboratory MDL.  
 "J" qualifier indicates analyte detected at a level less than the Minimum Level and greater than or equal to the Estimated Detection Limit. Concentrations within this range are estimated.  
 "B" flag indicates the compound was detected in the blank and sample.

Screening Levels listed for Hexachlorodibenzo-p-dioxin, mixture in the SL Table are presented for for 1,2,3,6,7,8-HxCDD and 1,2,3,7,8,9-HxCDD.

## **APPENDIX I**

### SCDHEC MONITORING WELL APPROVALS AND NAVY DIG PERMIT

South Carolina Department of Health  
and Environmental Control

## Temporary Monitoring Well Approval

Approval is hereby granted to: Mary Beth Cline/ S&ME  
on behalf of: Edward McClain/Calvary AME Church  
Facility: 2413 meeting Street Road  
Site Identification: 10-04941  
County: Charleston

This approval is for the installation of 2 temporary groundwater-monitoring wells. The temporary wells are to be installed in the locations as illustrated on the submitted map and per the proposed construction details provided by your correspondence dated 11/7/11. The temporary wells are to be installed following all of the applicable requirements of R.61-71.

**Please note that R.61-71 requires the following:**

1. All wells shall be drilled, constructed, and abandoned by a South Carolina certified well driller per R.61-71.D.1.
2. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless the Department has approved another schedule. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f
3. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.
4. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c.
5. If any of the information provided to the Department changes, Jonathan McInnis (803 896-4061, mcinnijg@dhec.sc.gov) shall be notified a minimum of twenty-four hours prior to well construction as required by R.61-71.H.1.a.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002.

**Date of Issuance:** 11/7/11

**Approval #:** 4378

Charleston, SC 29405

Re: Temporary Monitoring Well Approval Request received 11/7/11  
Charleston County Site ID: 10-04941

Dear Mr. McClain :

The South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed and approved the referenced temporary monitoring well approval request submitted 11/7/11. The original temporary monitoring well approval has been sent to Mary Beth Cline/S&ME, Inc. and a copy is enclosed for your records. The analytical results from the groundwater samples should be submitted to my attention on or before 1/7/12. Please note the following:

- Well construction and sampling derived waste including but not limited to drill cuttings, drilling fluids, and development/purge water should be managed properly and in compliance with applicable requirements. If containerized, each vessel should be clearly labeled with regards to contents, source, and date of activity.
- Monitoring wells are to yield groundwater samples representative of the zone monitored per R.61-71 H.1.c of the South Carolina Well Standards and Regulations (e.g. low flow sampling techniques are recommended for samples to be analyzed for metals to reduce induced turbidity).
- If this investigation is conducted as part of a potential real estate transaction, the potential purchaser may want to contact SCDHEC's Brownfields Program before this work is performed. The Brownfields Program offers a mechanism to avoid liability for contamination that may be found during this investigation. The investigation proposed may satisfy part or all of the required assessment if pre-approved by the Brownfields Program. The Brownfields Program may be reached at 1-866-576-3432.

If you have any questions, please contact me at (803) 896-4061.

Sincerely,

Jonathan G. McInnis, Program Manager

## Temporary Monitoring Well Approval

Approval is hereby granted to: Mary Beth Cline/ S&ME  
on behalf of: Loren Ziff/ 2533 Spruill Ave, LLC  
Facility: 2533 Spruill Ave  
Site Identification: 10-04942  
County: Charleston

This approval is for the installation of 4 temporary groundwater-monitoring wells. The temporary wells are to be installed in the locations as illustrated on the submitted map and per the proposed construction details provided by your correspondence dated 11/7/11. The temporary wells are to be installed following all of the applicable requirements of R.61-71.

**Please note that R.61-71 requires the following:**

1. All wells shall be drilled, constructed, and abandoned by a South Carolina certified well driller per R.61-71.D.1.
2. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless the Department has approved another schedule. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f
3. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.
4. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c.
5. If any of the information provided to the Department changes, Jonathan McInnis (803 896-4061, mcinnijg@dhec.sc.gov) shall be notified a minimum of twenty-four hours prior to well construction as required by R.61-71.H.1.a.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002.

## Temporary Monitoring Well Approval

Approval is hereby granted to: Mary Beth Cline/ S&ME  
on behalf of: William Aldret/ CC&A Rentals, LLC  
Facility: 2111 Meeting Street Road  
Site Identification: 10-04944  
County: Charleston

This approval is for the installation of 6 temporary groundwater-monitoring wells. The temporary wells are to be installed in the locations as illustrated on the submitted map and per the proposed construction details provided by your correspondence dated 11/7/11. The temporary wells are to be installed following all of the applicable requirements of R.61-71.

**Please note that R.61-71 requires the following:**

1. All wells shall be drilled, constructed, and abandoned by a South Carolina certified well driller per R.61-71.D.1.
2. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless the Department has approved another schedule. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f
3. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.
4. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c.
5. If any of the information provided to the Department changes, Jonathan McInnis (803 896-4061, mcinnijg@dhec.sc.gov) shall be notified a minimum of twenty-four hours prior to well construction as required by R.61-71.H.1.a.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002.

## Temporary Monitoring Well Approval

Approval is hereby granted to: Mary Beth Cline/ S&ME  
on behalf of: Dept of Homeland Security/ Melissa Shearer  
Facility: Charleston Naval Complex  
Site Identification: 10-04945  
County: Charleston

This approval is for the installation of 20 temporary groundwater-monitoring wells. The temporary wells are to be installed in the locations as illustrated on the submitted map and per the proposed construction details provided by your correspondence dated 11/7/11. The temporary wells are to be installed following all of the applicable requirements of R.61-71.

**Please note that R.61-71 requires the following:**

1. All wells shall be drilled, constructed, and abandoned by a South Carolina certified well driller per R.61-71.D.1.
2. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless the Department has approved another schedule. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f
3. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.
4. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c.
5. If any of the information provided to the Department changes, Jonathan McInnis (803 896-4061, mcinnijg@dhec.sc.gov) shall be notified a minimum of twenty-four hours prior to well construction as required by R.61-71.H.1.a.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002.

## Temporary Monitoring Well Approval

Approval is hereby granted to: Mary Beth Cline, PE/ S&ME  
on behalf of: Chris Gaskins/ SCDOT  
Facility: Spruill Ave and Stromboli Ave  
Site Identification: 10-04979  
County: Charleston

This approval is for the installation of 28 temporary groundwater-monitoring wells. The temporary wells are to be installed in the locations as illustrated on the submitted map and per the proposed construction details provided by your correspondence dated 12/8/11. The temporary wells are to be installed following all of the applicable requirements of R.61-71.

**Please note that R.61-71 requires the following:**

1. All wells shall be drilled, constructed, and abandoned by a South Carolina certified well driller per R.61-71.D.1.
2. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless the Department has approved another schedule. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f
3. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.
4. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c.
5. If any of the information provided to the Department changes, Jonathan McInnis (803 896-4061, mcinnijg@dhec.sc.gov) shall be notified a minimum of twenty-four hours prior to well construction as required by R.61-71.H.1.a.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002.

Re: Temporary Monitoring Well Approval Request received 12/8/11  
Charleston County Site ID: 10-04979

Dear Mr. Gaskins:

The South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed and approved the referenced temporary monitoring well approval request submitted 12/8/11. The original temporary monitoring well approval has been sent to Mary Beth Cline, PE/ S&ME, Inc. and a copy is enclosed for your records. The analytical results from the groundwater samples should be submitted to my attention on or before 2/8/12. Please note the following:

- Well construction and sampling derived waste including but not limited to drill cuttings, drilling fluids, and development/purge water should be managed properly and in compliance with applicable requirements. If containerized, each vessel should be clearly labeled with regards to contents, source, and date of activity.
- Monitoring wells are to yield groundwater samples representative of the zone monitored per R.61-71 H.1.c of the South Carolina Well Standards and Regulations (e.g. low flow sampling techniques are recommended for samples to be analyzed for metals to reduce induced turbidity).
- If this investigation is conducted as part of a potential real estate transaction, the potential purchaser may want to contact SCDHEC's Brownfields Program before this work is performed. The Brownfields Program offers a mechanism to avoid liability for contamination that may be found during this investigation. The investigation proposed may satisfy part or all of the required assessment if pre-approved by the Brownfields Program. The Brownfields Program may be reached at 1-866-576-3432.

## Temporary Monitoring Well Approval

Approval is hereby granted to: Mary Beth Cline/S&ME  
on behalf of: Chris Gaskins/SCDOT  
Facility: 2128 Spruill Ave  
Site Identification: 10-05003  
County: Charleston

This approval is for the installation of 4 temporary groundwater-monitoring wells. The temporary wells are to be installed in the locations as illustrated on the submitted map and per the proposed construction details provided by your correspondence dated 1/24/12. The temporary wells are to be installed following all of the applicable requirements of R.61-71.

**Please note that R.61-71 requires the following:**

1. All wells shall be drilled, constructed, and abandoned by a South Carolina certified well driller per R.61-71.D.1.
2. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless the Department has approved another schedule. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f
3. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.
4. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c.
5. If any of the information provided to the Department changes, Jonathan McInnis (803 896-4061, mcinnijg@dhec.sc.gov) shall be notified a minimum of twenty-four hours prior to well construction as required by R.61-71.H.1.a.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002.

**Date of Issuance:** 1/24/12

Re: Temporary Monitoring Well Approval Request received 1/24/12  
Charleston County Site ID: 10-05003

Dear Mr. Gaskins :

The South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed and approved the referenced temporary monitoring well approval request submitted 1/24/12. The original temporary monitoring well approval has been sent to Mary Beth Cline/S&ME, Inc. and a copy is enclosed for your records. The analytical results from the groundwater samples should be submitted to my attention on or before 3/24/12. Please note the following:

- Well construction and sampling derived waste including but not limited to drill cuttings, drilling fluids, and development/purge water should be managed properly and in compliance with applicable requirements. If containerized, each vessel should be clearly labeled with regards to contents, source, and date of activity.
- Monitoring wells are to yield groundwater samples representative of the zone monitored per R.61-71 H.1.c of the South Carolina Well Standards and Regulations (e.g. low flow sampling techniques are recommended for samples to be analyzed for metals to reduce induced turbidity).
- If this investigation is conducted as part of a potential real estate transaction, the potential purchaser may want to contact SCDHEC's Brownfields Program before this work is performed. The Brownfields Program offers a mechanism to avoid liability for contamination that may be found during this investigation. The investigation proposed may satisfy part or all of the required assessment if pre-approved by the Brownfields Program. The Brownfields Program may be reached at 1-866-576-3432.

If you have any questions, please contact me at (803) 896-4061.

Sincerely,

Jonathan G. McInnis, Program Manager

## Temporary Monitoring Well Approval

Approval is hereby granted to: Mary Beth Cline, PE/S&ME  
on behalf of: Chris Gaskins/SCDOT  
Facility: 1801 Shipyard Creek Rd  
Site Identification: 10-05022  
County: Charleston

This approval is for the installation of 9 temporary groundwater-monitoring wells. The temporary wells are to be installed in the locations as illustrated on the submitted map and per the proposed construction details provided by your correspondence dated 2/21/12. The temporary wells are to be installed following all of the applicable requirements of R.61-71.

**Please note that R.61-71 requires the following:**

1. All wells shall be drilled, constructed, and abandoned by a South Carolina certified well driller per R.61-71.D.1.
2. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless the Department has approved another schedule. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f
3. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.
4. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c.
5. If any of the information provided to the Department changes, Jonathan McInnis (803 896-4061, mcinnijg@dhec.sc.gov) shall be notified a minimum of twenty-four hours prior to well construction as required by R.61-71.H.1.a.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002.

## Temporary Monitoring Well Approval

Approval is hereby granted to: Mary Beth Cline, PE/S&ME  
on behalf of: Shipyard Creek Associates  
Facility: Pittsburg Ave  
Site Identification: 18397  
County: Charleston

This approval is for the installation of 18 temporary groundwater-monitoring wells. The temporary wells are to be installed in the locations as illustrated on the submitted map and per the proposed construction details provided by your correspondence dated 10/1/13. The temporary wells are to be installed following all of the applicable requirements of R.61-71.

**Please note that R.61-71 requires the following:**

1. All wells shall be drilled, constructed, and abandoned by a South Carolina certified well driller per R.61-71.D.1.
2. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless the Department has approved another schedule. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f
3. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.
4. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c.
5. If any of the information provided to the Department changes, Jonathan McInnis (803 896-4061, mcinnijg@dhec.sc.gov) shall be notified a minimum of twenty-four hours prior to well construction as required by R.61-71.H.1.a.

**Please be advised that the Macalloy Site is on the National Pollutant List and is a Superfund site. Known Chemicals of Concern (COCs) that were found at the site are, Hexavalent Chromium, Arsenic, Copper, Lead, Zinc, Radium 226, Thorium 232, Potassium 40, and Uranium 235. Hexavalent Chromium and Arsenic are still present in the groundwater. Based on reports submitted to the Department all other COCs in the soil have been removed, the radiation that was found at the site was found in the former concentrator area on the southwest part of the property. The site is under remediation and is treating Hexavalent Chromium in the groundwater by injection of Sodium Dithionite and Ferrous Sulfate near the areas of the proposed drilling.**

**All derived waste from drilling, protective equipment, soil cuttings, and groundwater, should be stored in appropriate containers until lab results have been received to ensure proper disposal of the generated waste. Waste containers must be labeled and removed from the site within 30 days of the generated date.**

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002.

**Date of Issuance: 10/1/13**

## CHARLESTON NAVAL COMPLEX LUC AREA CONSTRUCTION PERMIT

GENERAL INFORMATION:		
Requestor: SC Department of Transportation	Location: (Include Bldg Nos. and Streets) Bldg #661/Bainbridge Av/Tidewater Rd/Holland St	Date of Request: 08.19.11
Contractor: S&ME, Inc.	Subcontractors: Mid Atlantic Drilling	SWMUs/AOCs Impacted: SWMU #9 & 196, AOC #690
PROPOSED WORK:		
Scope of Work: (Attach sketches, drawings & information outlined in Process to Conduct Construction Activities Document)		
Proposed scope of work will consist of performing preliminary environmental assessment. This task will include performing borings for the purpose of collecting soil and groundwater samples. Please see the attached boring location map and sample collection method description.		
Construction Schedule (planned start date - planned completion date): 09.12.11 - 12.31.11		
LAND USE CONTROLS:		
Current Land Use Controls on Construction Area: Groundwater Use Restriction, Use Restriction, Digging Excavation Restriction, & Engineering Controls		
Frequency and Date of Next LUC Inspection for Construction Area: Semi-Annual		
Potential Effect of Proposed Construction on LUCs: Borings in areas of LUCs.		
CERTIFICATIONS:		
As a representative of the property owner of the subject property, I hereby certify that: (check all that apply)		
<input checked="" type="checkbox"/> 1. I possess an updated copy of the CNC LUC Areas Map and Interim Measures Work Plan.		
<input checked="" type="checkbox"/> 2. I acknowledge that residual contamination exists on the subject property and am aware that further information on site contaminants can be found in the Administrative Record located at Bldg 7, 1330 Truxton Ave, Suite 300.		
<input checked="" type="checkbox"/> 3. Information regarding SWMUs/AOCs, and contaminants will be provided to all contractors and subcontractors. Contractor and subcontractor representatives to sign below signifying receipt of information.		
S&ME, Inc. <i>Mary Beth Cline / Mary Beth Cline</i> 08.23.11		
Contractor Mid Atlantic Drilling	Name/Signature <i>Jennifer A Stewart</i>	Date 8/22/11
Sub-Contractor	Name/Signature	Date
<input checked="" type="checkbox"/> 4. The proposed construction will not change the land use (i.e., from industrial to residential)		
<input checked="" type="checkbox"/> 5. Personnel hazards will be controlled where construction activities have the potential to interfere with existing remedies. Exposure controls such as PPE, exclusion zones, etc. will be utilized.

## **INFORMATION FOR DIG PERMIT REQUEST**

The South Carolina Department of Transportation (SCDOT) is planning an environmental exploration for a new Port Access Road that will extend from Interstate 26 to the proposed Marine Container Terminal on the former Charleston Naval Complex (CNC) in Charleston, South Carolina. This planned environmental exploration consists of performing field sampling and laboratory testing of various media including soil and groundwater. The proposed sample locations will be positioned at specific points along the proposed Port Access Road alignment. S&ME, Inc. (S&ME) will be conducting the environmental assessment for the SCDOT.

Five soil boring / groundwater monitoring well locations are planned within the property of the former CNC. S&ME will collect soil and groundwater from each of the five boring locations shown on the attached Figure 1. S&ME will also collect surface water and sediment from Shipyard Creek in the approximate locations shown on the attached Figure 1.

### **Sampling Methods**

Sampling and analytical work conducted at the property will be performed in accordance with the SCDHEC's and the EPA Region IV Field Branches Quality System and Technical Procedures (FBQSTP) to the extent detailed in each task activity described below. Sampling equipment in direct contact with samples will be constructed of glass, stainless-steel, or Teflon® and handled by an environmental technician and/or professional donning nitrile gloves.

### **Decontamination Procedures**

To lessen the potential for cross-contamination between sample locations due to the use of sample collection equipment, S&ME will perform field decontamination during the sample collection activity, as necessary. A temporary decontamination area will be constructed on the subject property near Building 661 (or other designated area). The decontamination area will include wash and rinse buckets and/or an area constructed with a small berm (of straw bales, pipes, etc.) lined with plastic sheeting constructed in a manner to allow water to drain to a central collection point. The collected liquid and solid waste will be combined with other investigative derived waste (IDW), and placed in plastic 55-gallon drums, appropriately labeled, and staged on-site to await proper disposal.

Sampling equipment brought to the property will be previously decontaminated per the EPA's FBQSTP. As necessary (after sampling equipment has been used in the field), the field decontamination procedure for sampling equipment will follow the protocol established in the FBQSTP. Following field decontamination, each piece of sampling equipment will be used immediately or wrapped in aluminum foil for later use.

As necessary, items of down-hole drilling equipment (hollow stem augers, drill rods, etc.) will be decontaminated prior to mobilization to the work area. After down-hole drilling equipment has

been utilized in the field (i.e., following each well installation), the field decontamination procedure for down-hole drilling equipment will consist of steam (or high-pressure hot water) cleaning followed by a tap water rinse. The cleaned equipment will be allowed to air dry on a stable rack at least two feet above the ground surface and covered with clean plastic while awaiting set-up of the next sampling location.

### **Soil and Sediment Quality Assessment**

S&ME will collect and analyze soil and sediment samples from selected boring locations. From each boring, S&ME will collect soil samples per the USEPA Technical Procedure SESDPROC-300-R1 to the extent detailed below. S&ME plans to subcontract a portion of the drilling activity to Mid-Atlantic Drilling (MAD).

Continuous samples will be collected from the ground surface to the termination depth of the borings (top of the Cooper Marl) for direct observations and field screening of soils. The specific depth interval(s) selected for laboratory analysis will depend on the results of on-site screening (with a Toxic Vapor Analyzer (TVA) or other appropriate method) and direct observations.

At each of the borings, samples will be collected as discrete samples for subsequent laboratory analysis using direct push sampling technology. New disposable sampling sleeves will be used for direct push sample collection. Soil and sediment samples will be placed in laboratory supplied containers, stored in an iced cooler and submitted with chain-of-custody documentation to an SCDHEC-certified analytical laboratory for analysis of the following chemicals of concern:

- Target Compound List (TCL) Volatile Organic Compounds (VOC) by SW-846 Method 8260B;
- TCL Semi-Volatile Organic Compounds (SVOC) by SW-846 Method 8270D;
- Target Analyte List (TAL) Metals by SW-846 Methods 6010C and 7471A for mercury;
- TCL Pesticides by SW-846 Method 8081B; and,
- TCL Polychlorinated Biphenyls (PCBs) by SW-846 Method 8082A.

We will collect and ship additional soil and sediment sample volume to the laboratory. If the initial laboratory results indicate additional disposal characterization is needed, the additional sample volume will be analyzed for:

- Toxicity Characteristic Leaching Procedure (TCLP) VOCs and TCLP Metals by SW-846 Extraction Method 1311
- Reactivity (releasable cyanide and sulfide) by Methods SW7.3.3.2 and SW7.3.4.2, respectively;
- Corrosivity by SW-846 Method 9040; and,
- Ignitability by SW-846 Method 1030.

If additional characterization is not needed, the additional sample volume will be discarded by the laboratory.

Soil borings 5 feet and shallower will be abandoned by backfilling with native fill material. Soil borings deeper than 5 feet will be abandoned by filling the boring with bentonite-cement, neat cement, or 20% high solids, sodium bentonite grout. Soil cuttings generated from borings will be containerized in a plastic, 55-gallon drum as IDW. The drum will be labeled according to content, sampling media, location and date generated. Disposal of IDW will be based on the results of the sample analyses.

### **Groundwater and Surface Water Quality Assessment**

S&ME will apply for approval from SCDHEC to install temporary groundwater monitoring wells on the subject property. In accordance with SCDHEC requirements, the current property owner's name, address, telephone number, and point of contact will be submitted. A condition of a well installation approval requires collected data to be provided to the SCDHEC. A copy of the monitoring well approval request is attached for your review and approval for submittal.

Sampling equipment in direct contact with groundwater samples will be constructed of decontaminated stainless steel, Teflon<sup>®</sup>, or clean disposable bailers and handled by a gloved environmental technician and/or professional. A South Carolina Certified Well Driller will perform or supervise well drilling and abandonment activities and the wells will be constructed and abandoned in compliance with South Carolina Well Standards (R. 61-71). Following the collection of groundwater samples from the temporary wells, the wells will be properly abandoned by inserting a tremie pipe into the boring and grouting it from the bottom up with bentonite-cement, neat cement, or 20% high solids, sodium bentonite grout.

Temporary wells will be installed in each of the borings for the purpose of collecting groundwater from the top of the local water table in approximate 15-foot intervals to the top of the Cooper Marl formation. The temporary wells will also be installed using a direct push sampling rig. The temporary wells will be constructed of 4 feet of 1.0-inch diameter slotted stainless-steel screen (0.010-inch) and 1.5-inch diameter steel casing from the top of the screen to the ground surface.

Interval groundwater samples from each temporary well will be collected from the direct push down-hole technology at approximately 15-foot intervals to termination (the top of the Cooper Marl) using a peristaltic pump (or a stainless steel check valve) and tubing. Collected groundwater samples will be field screened using the TVA and/or detector tubes (for the presence of perchloroethylene). A shallow (water table) sample will be collected from each boring. Based on the field screening results, an additional interval sample of groundwater from each well may be submitted for laboratory analysis. Selected groundwater samples will be carefully poured into laboratory-supplied containers from the temporary wells. Surface water samples will be collected directly into laboratory-supplied containers. Groundwater and surface water samples will be placed in an iced cooler and submitted with chain-of-custody documentation to an SCDHEC-certified laboratory for analysis of the following chemicals of concern:

- TCL VOC by SW-846 Method 8260B;
- TCL SVOC by SW-846 Method 8270D;
- Total TAL Metals by SW-846 Method 6010C and 7470A for mercury;
- Filtered TAL Metals by SW-846 Method 6010C and 7470A for mercury (filtered samples will be filtered by the laboratory using a 0.45 micron filter);
- TCL Pesticides by SW-846 Method 8081B; and,
- TCL PCBs by SW-846 Method 8082A.

The rationale for filtered metal analysis is to observe the total metal concentrations and be able to evaluate potential influence from sediment on metal concentrations.

Decontamination and purge water from well installation and sampling activities will be collected in a 55-gallon drum and staged on-site as IDW to await proper disposal by the SCDOT at a later date. The drum will be labeled according to content, sampling media, location and date generated. Disposal of IDW will be based on the results of the sample analyses.

## **TEMPORARY MONITORING WELL APPROVAL REQUEST**

August 24, 2011

South Carolina Department of  
Health and Environmental Control  
Bureau of Land and Waste Management  
2600 Bull Street  
Columbia, South Carolina 29201

Attention: Mr. Jonathan McInnis

**Reference: Temporary Monitoring Well Approval Request**  
Charleston Naval Complex  
Tidewater Road  
Charleston County, South Carolina  
S&ME Project No. 1131-08-554

Dear Mr. McInnis:

S&ME, Inc. (S&ME), on behalf of the South Carolina Department of Transportation (SCDOT), respectfully requests permission to install shallow and deep temporary groundwater monitoring wells near Tidewater Road on the Charleston Naval Complex (CNC) in North Charleston, South Carolina (subject property). The South Carolina Department of Health and Environmental Control (SCDHEC) Monitoring Well Application (DHEC 3736) is attached. Proposed sampling locations are provided shown on Figure 1.

The proposed sampling locations are intended to obtain additional information about the soil and groundwater in the construction area of the future road that will connect the proposed Marine Container Terminal at the CNC to Interstate 26. The borings are within the footprint or near combined solid waste management unit (SWMU) 9, SWMU 196, and area of concern (AOC) 690. We understand there are multiple land use controls (LUC) in the area including groundwater use restriction, use restriction, digging excavation restriction, and engineering controls. S&ME will obtain approval (i.e., *CNC LUC Area Construction Permit*) for planned work from the CNC.

Contact information for the property owner representative is below.

Department of Homeland Security  
Attention: Ms. Melissa Shearer, Environmental Safety Manager  
2000 Bainbridge Avenue  
Building 1  
North Charleston, South Carolina 29405  
p: 843.566.8511

The five boring locations may be adjusted in the field depending on site conditions and utility locations. The shallow temporary groundwater monitoring wells will be installed using a hand auger or direct push methods to depths of approximately 10 feet below ground surface (bgs). The deep temporary groundwater monitoring wells will be installed at field determined intervals for field screening using direct push methods to depths of approximately 30-70 feet bgs. A sample will be collected for laboratory analysis from a deep interval depending on direct observations and field screening results. Soil and groundwater will be collected from each boring for laboratory analysis. These borings will be advanced and abandoned by a South Carolina certified well driller in compliance with South Carolina Well Regulations and Standards (R. 61-71). Typical temporary monitoring well construction details are attached as Figure 2.

Soil and groundwater collected from the temporary groundwater monitoring wells will be submitted to a SCDHEC certified laboratory for analysis. The samples will be analyzed for: Target Compound List (TCL) volatile organic compounds (VOCs) by SW-846 Method 8260B; TCL semivolatile organic compounds (SVOCs) by SW-846 Method 8270D; Target Analyte List (TAL) Metals by SW-846 Methods 6010C and 7471B/7470A - water samples collected for metals analysis will be analyzed for total (unfiltered) and dissolved (filtered) metals; TCL Pesticides by SW-846 Method 8081B; and, TCL Polychlorinated Biphenyls (PCBs) by SW-846 Method 8082A. An additional soil sample volume will be sent to the laboratory. If the initial laboratory results indicate additional disposal characterization is needed, the additional sample volume will be analyzed for: Toxicity Characteristic Leaching Procedure (TCLP) VOCs and TCLP Metals by SW-846 Extraction Method 1311; Reactivity by Methods SW7.3.3.2 and SW7.3.4.2; Corrosivity by SW-846 Method 9040; and, Ignitability by SW-846 Method 1030.

We have tentatively scheduled drilling for after the week of September 12, 2011. We anticipate two to four days will be needed to advance the borings, collect the samples, and abandon the borings. This schedule is dependant on the weather and on-site groundwater conditions. A completed Water Well Record (Form 1903) and any received laboratory analytical data will be forwarded to you approximately four weeks after collection. Additional time may be needed for formal report submittal as the proposed roadway traverses many properties and access is not expected to be concurrent.

We appreciate your cooperation on this request and look forward to your approval letter. If you have any questions or need additional information, please do not hesitate to contact us at 843.884.0005.

Sincerely,

**S&ME, Inc.**

## DIG PERMIT - COMMENTS

BPMO Log Number: 247

Request Date: August 24, 2011

Comments Date: September 2, 2011

Location: Shipyard Creek at SWMU 9.

Description: An environmental assessment for the planned construction of a new road that will connect the proposed Marine Container Terminal at the CNC to Interstate 26. Soil borings and temporary monitoring wells are proposed and these locations are on the periphery or just outside the boundaries of SWMU 9.

### **Environmental conditions**

The Navy reminds S&ME that there are groundwater use and digging restrictions at the project location, specifically an environmental site known as Combined Solid Waste Management Unit (SWMU) 9. This covers a large area with multiple environmental sites including several SWMUs and Areas of Concern (AOC). Surface soils at these sites contain known contaminants' including semi-volatile organic compounds (SVOC) polychlorinated biphenyl (PCBs) and metals. Groundwater contains known contaminants including volatile organic compounds (VOCs), SVOCs and metals. In addition active monitoring wells may be encountered in and around the proposed site. A one foot (minimum) soil cover has been installed atop SW MU 9. However landfill debris may be encountered during clearing, grubbing, regarding, post digging and other related excavations.

### **Environmental precautions**

Site workers and visitors including contractor and subcontractor Personnel shall take necessary precautions to minimize dermal exposure with soils excavated and with any groundwater encountered at this location. If contamination is discovered during the course of excavating, digging, probing or any other intrusive activity whether contamination is expected or not, work should be stopped and the BRAC PMO office notified. Any soil that exhibits an unexpected odor is visually discolored or has objects in it that would indicate the possibility of a release of chemicals requires notification. S&ME shall remain clear of any monitoring wells that might be encountered. Many wells remain at this site and are actively sampled. Damaged wells must be repaired and or replaced at the expense of S&ME and with Navy, SCDHEC, and CH2MHill concurrence. If you have questions or concerns about the above comments, please contact Art Sanford at the BRAC PMO SE office at 843-743-2135, or by email [art.sanford@navy.mil](mailto:art.sanford@navy.mil) or David Criswell at 843-743-2130 or [david.criswell@navy.mil](mailto:david.criswell@navy.mil)

### Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

**Subject:** RE: TestAmerica Nashville - Report for project: Port Access Road/1131-08-554 - Final Report:NUK1797

Ken,  
Will you run TCLP Lead on Tract 67 SB-1 (0-2)? Is it out of hold time?

**COOLER RECEIPT**

NUK479Z 3548

Cooler Received/Opened On 11/12/2011@ 8:30

1. Tracking # 8751 (last 4 digits, FedEx)

Courier: Fedex IR Gun ID Ravnger

2. Temperature of rep. sample or temp blank when opened: 1.5 Degrees Celsius

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO...NA

4. Were custody seals on outside of cooler? YES...NO...NA

If yes, how many and where: 2 Front

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (initial) JH

7. Were custody seals on containers: YES NO and intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: ICB Ice-pack Ice (direct contact) Dry Ice Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES...NO...NA

13a. Were VOA vials received? YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES NO...NA

14. Was there a Trip Blank in this cooler? YES...NO...NA If multiple coolers, sequence # \_\_\_\_\_

I certify that I unloaded the cooler and answered questions 7-14 (initial) W

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial) W

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (initial) W

I certify that I attached a label with the unique LIMS number to each container (initial) W

21. Were there Non-Conformance Issues at login? YES NO Was a PIPE generated? YES NO # \_\_\_\_\_

Project/Site: 1131-08-554

TestAmerica Job ID: NUK1797

## Qualifiers

### GCMS Volatiles

Qualifier	Qualifier Description
L1	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above acceptance limits.
M8	The MS and/or MSD were below the acceptance limits. See Blank Spike (LCS).
R2	The RPD exceeded the acceptance limit.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
RL1	Reporting limit raised due to sample matrix effects.
pH	pH >2

### GCMS Semivolatiles

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
M8	The MS and/or MSD were below the acceptance limits. See Blank Spike (LCS).
ZX	Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

### Metals

Qualifier	Qualifier Description
MHA	Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
B	Analyte was detected in the associated Method Blank.
M7	The MS and/or MSD were above the acceptance limits. See Blank Spike (LCS).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
P7	Sample filtered in lab.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation may not be offered or required for all methods and analytes reported in this package. Please contact your project manager for the laboratory's current list of certified methods and analytes.

## COOLER RECEIPT

NUK1797

Cooler Received/Opened On 11/12/2011@ 8:30

1. Tracking # 8751 (last 4 digits, FedEx)

Courier: Fedex IR Gun ID Raynger

2. Temperature of rep. sample or temp blank when opened: 1.5 Degrees Celsius

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO...NA

4. Were custody seals on outside of cooler? YES..NO...NA

If yes, how many and where: 2 Front

5. Were the seals intact, signed, and dated correctly? YES..NO...NA

6. Were custody papers inside cooler? YES..NO...NA

I certify that I opened the cooler and answered questions 1-6 (initial) JH

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES..NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES..NO...NA

12. Did all container labels and tags agree with custody papers? YES..NO...NA

13a. Were VOA vials received? YES..NO...NA

b. Was there any observable headspace present in any VOA vial? YES NO..NA

14. Was there a Trip Blank in this cooler? YES..NO...NA If multiple coolers, sequence # \_\_\_\_\_

I certify that I unloaded the cooler and answered questions 7-14 (initial) W

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES..NO...NA

b. Did the bottle labels indicate that the correct preservatives were used YES..NO...NA

16. Was residual chlorine present? YES...NO..NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial) W

17. Were custody papers properly filled out (ink, signed, etc)? YES..NO...NA

18. Did you sign the custody papers in the appropriate place? YES..NO...NA

19. Were correct containers used for the analysis requested? YES..NO...NA

20. Was sufficient amount of sample sent in each container? YES..NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (initial) W

I certify that I attached a label with the unique LIMS number to each container (initial) W

21. Were there Non-Conformance issues at login? YES NO Was a PIPE generated? YES NO..# \_\_\_\_\_

## Qualifiers

### GCMS Volatiles

Qualifier	Qualifier Description
M8	The MS and/or MSD were below the acceptance limits. See Blank Spike (LCS).
R2	The RPD exceeded the acceptance limit.
pH	pH >2
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### GCMS Semivolatiles

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
M8	The MS and/or MSD were below the acceptance limits. See Blank Spike (LCS).
ZX	Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.
RL1	Reporting limit raised due to sample matrix effects.

### Pesticides

Qualifier	Qualifier Description
MNR1	There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike.
MNR	No results were reported for the MS/MSD. The sample used for the MS/MSD required dilution due to the sample matrix. Because of this, the spike compounds were diluted below the detection limit.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Metals

Qualifier	Qualifier Description
MHA	Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
B1	Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
B	Analyte was detected in the associated Method Blank.
R	The RPD exceeded the method control limit. The individual analyte QA/QC recoveries, however, were within acceptance limits.
M8	The MS and/or MSD were below the acceptance limits. See Blank Spike (LCS).
P7	Sample filtered in lab.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation may not be offered or required for all methods and analytes reported in this package. Please contact your project manager for the laboratory's current list of certified methods and analytes.

## COOLER RECEIPT

NUK1792

Cooler Received/Opened On 11/12/2011@ 8:30

1. Tracking # 6041 (last 4 digits, FedEx)

Courier: Fedex IR Gun ID Raynger

2. Temperature of rep. sample or temp blank when opened: 0.8 Degrees Celsius

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO NA

4. Were custody seals on outside of cooler? YES..NO...NA

If yes, how many and where: 2 Front

5. Were the seals intact, signed, and dated correctly? YES..NO...NA

6. Were custody papers inside cooler? YES..NO...NA

I certify that I opened the cooler and answered questions 1-6 (initial) JH

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES NO..NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES..NO...NA

12. Did all container labels and tags agree with custody papers? YES..NO...NA

13a. Were VOA vials received? YES..NO...NA

b. Was there any observable headspace present in any VOA vial? YES NO..NA

14. Was there a Trip Blank in this cooler? YES NO..NA If multiple coolers, sequence # \_\_\_\_\_

I certify that I unloaded the cooler and answered questions 7-14 (initial) W

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES..NO...NA

b. Did the bottle labels indicate that the correct preservatives were used YES..NO...NA

16. Was residual chlorine present? YES..NO..NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial) W

17. Were custody papers properly filled out (Ink, signed, etc)? YES..NO...NA

18. Did you sign the custody papers in the appropriate place? YES..NO...NA

19. Were correct containers used for the analysis requested? YES..NO...NA

20. Was sufficient amount of sample sent in each container? YES..NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (initial) W

I certify that I attached a label with the unique LIMS number to each container (initial) W

21. Were there Non-Conformance issues at login? YES..NO Was a PIPE generated? YES..NO..# \_\_\_\_\_

COOLER RECEIPT FORM

Cooler Received/Opened On 11/12/2011 @ 0830

1. Tracking # 6052 (last 4 digits, FedEx)

Courier: FedEx IR Gun ID 95610068

2. Temperature of rep. sample or temp blank when opened: 1.2 Degrees Celsius

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO...NA

4. Were custody seals on outside of cooler? YES...NO...NA

If yes, how many and where: 2 front

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (initial) OC

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES...NO...NA

13a. Were VOA vials received? YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...NO...NA

14. Was there a Trip Blank in this cooler? YES...NO...NA If multiple coolers, sequence # 1792-07

I certify that I unloaded the cooler and answered questions 7-14 (initial) W

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial) W

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

## Qualifiers

### GCMS Volatiles

Qualifier	Qualifier Description
M7	The MS and/or MSD were above the acceptance limits. See Blank Spike (LCS).
ZX	Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.
R	The RPD exceeded the method control limit. The individual analyte QA/QC recoveries, however, were within acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
A-01	Sample contained too much sediment to run straight
P6	Sample received unpreserved, however the sample was analyzed within 7 days per EPA recommendation.
RL1	Reporting limit raised due to sample matrix effects.

### GCMS Semivolatiles

Qualifier	Qualifier Description
MNR1	There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
R	The RPD exceeded the method control limit. The individual analyte QA/QC recoveries, however, were within acceptance limits.
M8	The MS and/or MSD were below the acceptance limits. See Blank Spike (LCS).

### Pesticides

Qualifier	Qualifier Description
MNR1	There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike.
Z1	Surrogate recovery was above acceptance limits.
QSU	Sulfur (EPA 3660) clean-up performed on extract.
RL1	Reporting limit raised due to sample matrix effects.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Analyte was detected in the associated Method Blank.
M4	The MS/MSD required a dilution due to matrix interference. Because of this dilution, the matrix spike concentrations in the sample were reduced to a level where the recovery calculation does not provide useful information. See Blank Spike (LCS).
M7	The MS and/or MSD were above the acceptance limits. See Blank Spike (LCS).
MHA	Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
B1	Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
P7	Sample filtered in lab.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation may not be offered or required for all methods and analytes reported in this package. Please contact your project manager for the laboratory's current list of certified methods and analytes.

**COOLER RECEIPT**

NUK1675

Cooler Received/Opened On 11/11/2011 @ 0830

1. Tracking # 1728 (last 4 digits, FedEx)

Courier: FedEx IR Gun ID 97310166

2. Temperature of rep. sample or temp blank when opened: 0.2 Degrees Celsius

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO...NA  NA

4. Were custody seals on outside of cooler?  YES...NO...NA

If yes, how many and where: one front & Back

5. Were the seals intact, signed, and dated correctly?  YES...NO...NA

6. Were custody papers inside cooler?  YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (initial) DA

7. Were custody seals on containers: YES  NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used?  Bubblewrap  Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process:  Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)?  YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)?  YES...NO...NA

12. Did all container labels and tags agree with custody papers?  YES...NO...NA

13a. Were VOA vials received?  YES...NO...NA

b. Was there any observable headspace present in any VOA vial?  YES...NO...NA

14. Was there a Trip Blank in this cooler?  YES...NO...NA If multiple coolers, sequence # 1

I certify that I unloaded the cooler and answered questions 7-14 (initial) DA

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES..NO..NA  NA

b. Did the bottle labels indicate that the correct preservatives were used  YES...NO...NA

16. Was residual chlorine present? YES...NO...NA  NO

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial) DA

17. Were custody papers properly filled out (ink, signed, etc)?  YES...NO...NA

18. Did you sign the custody papers in the appropriate place?  YES...NO...NA

19. Were correct containers used for the analysis requested?  YES...NO...NA

20. Was sufficient amount of sample sent in each container?  YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (initial) DA

I certify that I attached a label with the unique LIMS number to each container (initial) DA

21. Were there Non-Conformance issues at login? YES  NO Was a PIPE generated? YES...NO...# NO

## COOLER RECEIPT FORM

NUK1675

11/22/11 23:59

Cooler Received/Opened On 11/11/2011 @ 08:30

1. Tracking # 1831 (last 4 digits, FedEx)

Courier: FEDEX IR Gun ID 96210146

2. Temperature of rep. sample or temp blank when opened: 0.1 Degrees Celsius

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES......NO...NA

4. Were custody seals on outside of cooler?  YES...NO...NA

If yes, how many and where: 2-Front

5. Were the seals intact, signed, and dated correctly?  YES...NO...NA

6. Were custody papers inside cooler?  YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (initial) P.A.

7. Were custody seals on containers: YES  NO and intact YES...NO... NA

Were these signed and dated correctly? YES...NO... NA

8. Packing mat'l used?  Bubblewrap  Plastic bag  Peanuts  Vermiculite  Foam Insert  Paper  Other  None

9. Cooling process:  Ice  Ice-pack  Ice (direct contact)  Dry ice  Other  None

10. Did all containers arrive in good condition (unbroken)?  YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)?  YES...NO...NA

12. Did all container labels and tags agree with custody papers?  YES...NO...NA

13a. Were VOA vials received?  YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES......NO...NA

14. Was there a Trip Blank in this cooler?  YES...NO...NA If multiple coolers, sequence # 2

I certify that I unloaded the cooler and answered questions 7-14 (initial) M

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO... NA

b. Did the bottle labels indicate that the correct preservatives were used  YES...NO...NA

16. Was residual chlorine present? YES......NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial) M

17. Were custody papers properly filled out (ink, signed, etc)?  YES...NO...NA

18. Did you sign the custody papers in the appropriate place?  YES...NO...NA

19. Were correct containers used for the analysis requested?  YES...NO...NA

20. Was sufficient amount of sample sent in each container?  YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (initial) A

I certify that I attached a label with the unique LIMS number to each container (initial) B

21. Were there Non-Conformance issues at login? YES......NO... Was a PIPE generated? YES......NO...#

## Qualifiers

### GCMS Volatiles

Qualifier	Qualifier Description
M7	The MS and/or MSD were above the acceptance limits. See Blank Spike (LCS).
R2	The RPD exceeded the acceptance limit.
L	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
L1	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above acceptance limits.
B	Analyte was detected in the associated Method Blank.
ZX	Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
PV	Acid preservation was indicated on the sample vial. However, a pH of <2 was not obtained.
RL1	Reporting limit raised due to sample matrix effects.

### GCMS Semivolatiles

Qualifier	Qualifier Description
MNR	No results were reported for the MS/MSD. The sample used for the MS/MSD required dilution due to the sample matrix. Because of this, the spike compounds were diluted below the detection limit.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Analyte was detected in the associated Method Blank.
MHA	Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
M7	The MS and/or MSD were above the acceptance limits. See Blank Spike (LCS).
B1	Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
P7	Sample filtered in lab.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
