Notes:		
See Section 704 of the Standard Specifications for additional requirements and in regarding prestressed concrete box beam units. The Supplemental Specification " Post-Tensioning and Prestressed Cored Slabs" also applies to box beams. Special f for Prestressed Cored Slabs (including Transverse Tie Rod requirements) also app	Grout for Provisions	
Submit shop drawings in accordance with the Standard Specifications and the RFP.		
Use prestressing strands that conform to the latest <code>AASHTO</code> M 203 for grade 270 (low relaxation)	•
Use reinforcing steel that conforms to AASHTO M 31, Type W Grade 60.		
The tensioning load in all 0.6" Dia. low relaxation strands is 43.9 kips. Do not	release the	

The renstoning toda in all 0.6 bia, fow relaxation strands is 43.9 kips, bo not release the strands until the compressive strength of the concrete has reached the value shown for f'ci.

When casting the box beams, use a positive hold-down system to prevent the voids from rising or moving sideways. Use a noncorrosive hold-down system that is designed to remain in place until the concrete attains the specified release strength. Include details of the hold-down system in the shop plan submittal.

Always maintain box beam units in an upright position. Use lifting devices located within 2'-6" of the ends to lift or handle the box beam units. Provide a 1" deep recess at the lifting devices. Grout the recesses prior to waterproofing the top surface of the box beam units. Do not permit the box beam units to be placed or stored on interior supports causing negative moments.

Apply an epoxy protective coating to the ends of box beam units after strand recesses are patched with mortar. Use a coating system in accordance with ASTM C-881, Type VII, Grade 2, Class D-F.

Tie rod assemblies include a $1^{l}/4^{"}$ Dia. rod, two heavy hex nuts, two lock washers, and two 5" x 5" x $\frac{5}{8}$ " plate washers. Thread 8" on each end of the tie rods. Provide tie rods and plate washers meeting the requirements of AASHTO M 270, Grade 36. Provide nuts meeting the requirements of ASTM A 563, Grade A. Galvanize tie rods and all hardware in accordance with ASTM A 123, ASTM A 153, or ASTM F 2329 as applicable. Tie rods are to be installed for test fit during fit up of span in casting yard.

Place box beam units so that the maximum transverse joint width at any location along the bent does not exceed 1^{7}_{8} ".

For location of fixed and expansion bearings, see "Bridge Plan & Profile".

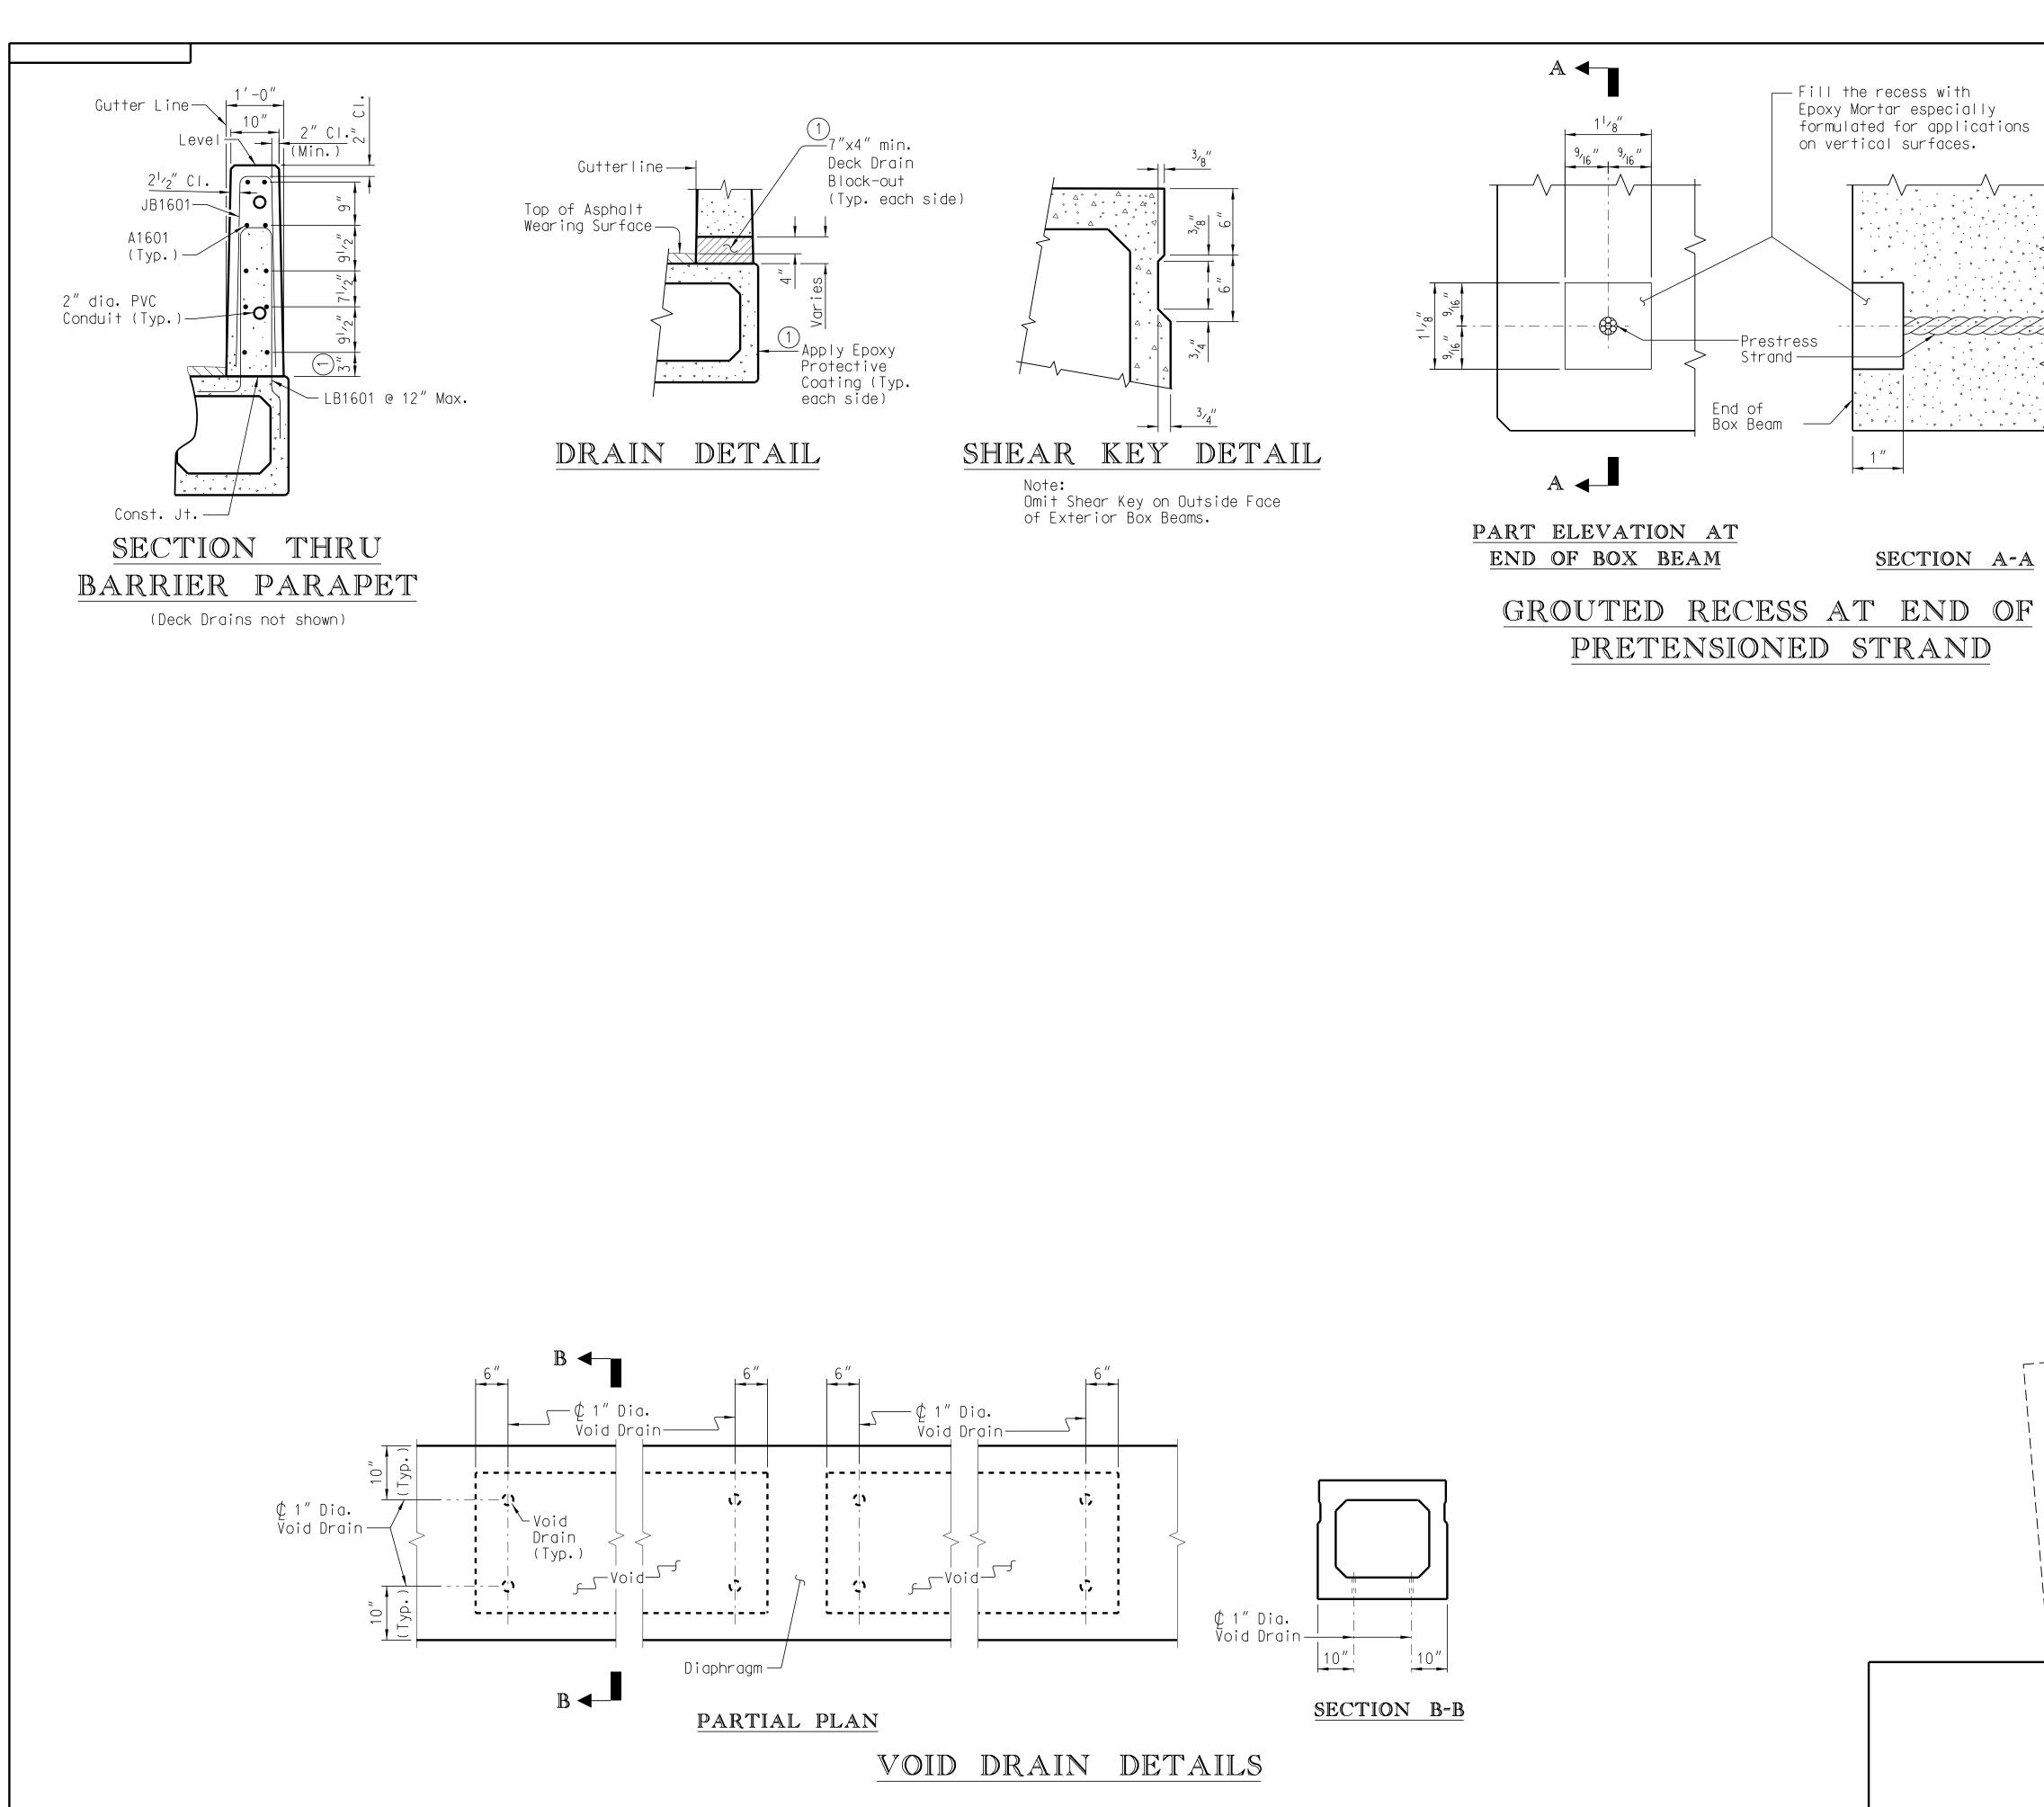

For locations of deck drains, see Sh. XX.

Grout all shear keys, dowel holes, and recesses for transverse tie rods after tightening the transverse tie rods. At expansion ends of slab units, fill the dowel holes with cold applied elastic filler to $1^{l}/2^{\prime\prime}$ above the top of dowels and fill the remaining portion with grout. After the grout has cured for a minimum of three days, and has attained the required strength, place the barrier parapet.

Construct deck drains with a 7" wide by variable height (4" above top of wearing surface) block-out in the barrier parapet concrete. Locate drains in barrier parapet regions with 12" minimum spacing of vertical reinforcing only. Do not locate drains within 10-feet from end of barrier or open joint in the barrier parapet. Center drains in between vertical reinforcing and shift longitudinal reinforcing to provide 2" clearance to block-out. Apply epoxy protective coating to exterior face of the exterior Box Beam units with drains in the barrier rail. Use a coating system in accordance with ASTM C-881, Type VII, Grade 2, Class D-F.

Prior to placement of the asphalt wearing surface, apply one of the following two bridge deck waterproofing systems to the top of the box beam units, or submit an equivalent system for approval: Pitchmastic PmB by Prime Resins, or Bridge-Tech by R.J. Watson. Both systems consist of a prime coat, a membrane layer, and a topcoat/tackcoat. Follow manufacturer recommendations. Bridge all longitudinal joints between units and transverse joints with reinforcing tape approved by the waterproofing manufacturer.
