MINUTES OF THE SCDOT/CAGC BRIDGE SUBCOMMITTEE  
August 20, 2009

Present:

Ted Geddis, Sloan Construction, Co-Chairman
Charles Matthews, SCDOT, Co-Chairman
Mark Foster, Lee Construction Company
Richard Nickel, Carolina Bridge Company
Donald White, Saddlebrook Construction
Sonny DuPre, Cape Romain Contracting
David Glenn, SCDOT District 6 Construction Engineer
Ken Johnson, FHWA
Doug McClure, SCDOT Assistant Bridge Construction Engineer
Barry Bowers, SCDOT Preconstruction Support
Mary Stepko, SCDOT Construction

Absent:

John Barrett, United Contractors, Inc.
Greg Canniff, Palmetto Structures Co., Inc.
Chad Curran, E S Wagner Company
Walter H. Deierlein, Republic Contracting Corp.
Mike Lively, Crowder Construction Company
Howard Wooten, A.M. Tuck, Inc.
Darryl Kennerly, SCDOT Dist 7 Resident Engineer
Sammy Hendrix, Carolinas AGC

Call to Order:

Charles Matthews called the meeting to order at 2:00 pm. Introductions were made and a sign-up sheet was passed around for each attendee to sign.

Old Business:

A. Bridge Deck Rideability – Surface Smoothness. Resident engineers compiled a questionnaire concerning various aspects of grinding, milling and screed. Discussed the difficulty in achieving rideability on the first DOT test, costs involved, length of straight edge, pipe rail support, screed, hand ground repairs, etc. Mr. Matthews stated that too much grinding causes a durability issue on the bridge. The contractors will submit recommendations to Ted Geddis concerning this questionnaire. (See attachment)
New Business:

A. Improve the Effectiveness / Efficiency of the Submittal Process. Discussed the number of copies needed for audit purposes. Ted Geddis provided a copy of a Standard Welding Specification (see attachment) and suggested that a specification like this might be helpful for SCDOT projects. Barry Bowers and Mr. Matthews will check to see if this is possible to add as a specification to SCDOT proposals. Discussed putting the shop drawing submittals on a website so they can be tracked. Shop plans should go directly to the consultant, the Resident Engineer should receive a copy of the transmittal only. It was suggested that a submittal list from SCDOT and the contractors should be brought to the preconstruction meeting and discussed. Request that all contractors submit recommendations for problems that are causing the most trouble to Ted Geddis, and he will compile a list for SCDOT. A review of the Specification Book is currently being looked at by the Joint taskforce.

B. CPM Scheduling Requirements for Small Projects. It was suggested that smaller projects be given more time or make it a simpler process. Send samples of a modified CPM to Ted Geddis. AGC will provide a proposed schedule.

C. Mentoring Program. Copy of Mentor Protégé Program is attached. According to the program, only 50% of the DBE work will be counted. This could make it hard to meet the goal.

D. Late “Notice to Proceed” Issues. Receiving a late Notice to Proceed is causing some scheduling delays for projects, especially near the end of the year (paving restrictions) or during poor weather conditions. Mr. Matthews suggested that the contractors contact the RCE when they have this problem and explain why there is a delay so that time adjustments can be reviewed. Each project will be reviewed on a case by case basis. Some major problems encountered are late preconstruction meetings, utility delays and clearing prior to construction. It was suggested that Clearing contracts be let early to clear the job sites prior to construction.

**ACTION ITEM FOR JOINT COMMITTEE.**

E. Discussion of color of Protective Clothing for Construction. Discussed and determined that this was not a problem.

Other Business:

A. Plans. Discussed the time available to check out a project prior to the letting. If you find a problem with the bid items, please call the SCDOT construction office or Jamie Kendall. Barry Bowers will check with Jamie to see if calls have been returned to contractors concerning these problems.
B. Barrier Parapet, Rebar Welding issues prior to slipforming (see attachment). Discussed welding of rebar, the use of supplemental bars, and templates at end of bents. Please send suggestions for a field welding specification to Ted Geddis so that the Design section can review.

Next Meeting Date:

The next meeting will be held on Thursday October 15, 2009. Contractors will meet at 1 pm. Full committee at 2 pm.

**NOTES**
Page 10-143, Subarticle 1072-20(D) Qualification of Welds and Procedures, replace the third sentence of the first paragraph with the following:

For all prequalified field welds, submit Welding Procedure Specifications (WPS) for each joint configuration for approval at least 30 days prior to performing any welding. In lieu of this, use the WPS provided and preapproved by the Department. These preapproved WPS are available from the Materials and Tests Unit or at:
http://www.ncdot.org/doh/operations/materials/structural/appr_proc.html. Use non-prequalified welds only if approved by the Engineer. Submit WPS for all non-prequalified welds to the Engineer for approval. At no cost to the Department, demonstrate their adequacy in accordance with the requirements of the Bridge Welding Code.

COMMENTS:

Remove all coating, rust, dirt and mill scale within one inch of the area to be welded prior to fit-up. Remove all slag, spatter and weld discontinuities between passes. Clean the completed weld of all debris, slag and spatter.

Care shall be taken to not exceed 250° in the proximity of the Elastomeric Bearing material and 300° in the proximity of the concrete.

The South Carolina Department of Transportation (SCDOT) has initiated a Mentor Protégé Program for federal-aided and state-funded highway projects. The Mentor Protégé Program is a purposeful undertaking in line with SCDOT's Strategic Plan initiative to conserve resources.

This is an excellent program that pairs a successful contractor/service provider experienced and familiar with SCDOT policies and practices with a Disadvantaged Business Enterprise (DBE) seeking to become a competitive, proficient resource for SCDOT contracts. By promoting the practices and performance of the more established prime contractor who provides consultation and guidance to DBEs, SCDOT will continue to meet federal guidelines for the support of DBE firms and gain an avenue to assist with building relationships to enhance contract performance.

It is exciting to initiate a service that will advance the economic development of South Carolina and eventually benefit the goal of increasing the number of women-owned and minority-owned contractors performing on SCDOT projects. We believe that transportation stakeholders, especially the traveling public, will benefit from the Mentor Protégé Program.

We thank you for your participation and commitment in ensuring the accomplishment of the program's goals and objectives. By instituting a method to link businesses certified under the South Carolina Unified Certification Program (UCP) with flourishing professional service providers and general contractors who contract with the SCDOT on highway design/engineering and construction projects, the Mentor Protégé Program will build a more effective, competitive and diverse pool of contractors.

H. B. Limehouse, Jr.
Secretary of Transportation
South Carolina Department of Transportation

Robert L. Lee
South Carolina - Division Administrator
Federal Highway Administration
SOUTH CAROLINA DEPARTMENT OF TRANSPORTATION
DBE Supportive Services Program
Mentor-Protégé Program

Purpose:
The purpose of the Mentor-Protégé Program (MPP) is to establish a link between businesses certified under the South Carolina Unified Certification Program (UCP), successful professional service providers, and general contractors who contract with the South Carolina Department of Transportation (SCDOT) on highway design/engineering and construction projects. The program is sponsored by SCDOT in coordination with the Federal Highway Administration (FHWA) and is designed to build a more effective, competitive and diverse pool of contractors capable of bidding on future projects.

Objectives:
The objectives of the Mentor-Protégé Program include:

1. Promoting the development of business management and technical skills for certified Disadvantaged Business Enterprises (DBEs) to compete more successfully.

2. Developing an effective method for engineering consultants, general contractors and subcontractors who desire participation in the SCDOT Mentor Protégé Program (MPP) and helping certified DBEs to acquire greater access to business support systems that facilitate growth and development.

3. Identifying appropriate construction projects that support business partnerships and foster cooperative, compatible relationships.

4. Establishing review sessions with Mentors and Protégés to access and monitor the progress of the Protégés toward their achievement of the Program goals.

Scope:
The program is designed to allow the Mentor firm to provide the Protégé with guidance, technical support as well as the benefit of the Mentor’s expertise and experience in:

- Strategic Planning
- Marketing and Business Development
- Financial Management
- Contract Procurement
- Purchasing/Leasing
- Bid Preparation and Procedures
- Business Management
- Personnel Management
- Operational Management

The Program will be conducted over a period no longer than twenty four months during which time, the Mentor-Protégé team will identify strategies for accelerating growth, securing resources and entering target markets. A final report documenting “lessons learned” by both the Mentor and Protégé will be submitted to SCDOT and FHWA.

At the end of the program, the Protégé should be empowered to grow and thrive as a successful growing business.

Methodology:
The Mentor Protégé Program (MPP) will be introduced through a series of public informational meetings and a carefully planned advertisement initiative that will explain the intent and purpose of the program, along with a list of the requirements. An informational packet will be distributed to professional service providers and contractors who perform design, engineering, and other professional and construction services on SCDOT projects and firms certified with the South Carolina UCP.

An orientation/overview session will be held to review the key components of the MPP and solicit potential mentors and protégés. Based upon the criteria established, the Office of Busi-
ness Development and Special Programs, along with Construction. Pre-construction and Capital
Improvements offices will determine which firms will be recommended as mentors and protégés.
An application list will be maintained by the Office of Business Development and Special Pro-
grams.

SCDOT will identify potential projects for MPP relationships and will solicit proposals from pro-
fessional service providers and contractors. A Memorandum of Understanding will be devel-
oped by SCDOT, the mentor and the protégé outlining the responsibilities of each entity and
the monitoring requirements established for participation in the program.

The MPP relationship will have periodic reviews to ascertain the progress of the relationship and
consider any further assistance SCDOT may be able to provide. Upon completion of the Men-
tor-Protégé relationship, a final review will be conducted to evaluate the goals and objectives
established for the MPP.

**Mentor Requirements:**

The Mentor must submit the following:

1. A brief outline of the type of assistance, services and/or resources it will provide
to the Protégé and describe how this assistance will benefit the Protégé.

2. Information that demonstrates the firm’s ability to provide management and tech-
nical assistance to the Protégé.

3. Assurance of a solid financial foundation and in good-standing with state
and federal agencies, and maintaining a minimum CPS (Contractor Performance
Score) score of 75 or above.

**Protégé Requirements:**

The Protégé must submit the following:

1. Complete the application forms and agree to the Program requirements.

2. Complete a company assessment and business plan, which includes a market-
ing plan prior to the implementation of the Mentor-Protégé Team.

3. Provide a written description of the anticipated benefits that will be gained from
the relationship with the Mentor firm.

4. Become pre-qualified as a prime bidder with SCDOT.

The Mentor-Protégé team will identify areas for improvement; set targets for improvements; and
establish deadlines to accomplish the goals and objectives of the MPP team.

**SCDOT Participation:**

The South Carolina Department of Transportation will provide support to the Mentor Protégé
Program as follows:

1. Host periodic networking session for Mentors and Protégés.

2. Review all Mentor Protégé applications
and announce the firms that are approved
for the Mentor Protégé program.

3. Facilitate a “Partnering Session” with the
Mentor and Protégé.

4. Identify projects that are potentially fea-
sible for mentor protégé relationships.

5. Conduct periodic reviews with the Men-
tor and/or Protégé to establish the status
of the program.

**Deliverables:**

1. **Memorandum of Understanding**

The Department and Mentor will execute a
Memorandum of Understanding, and each party
will identify the resources allocated to the MPP.
The MOU must be signed by authorized repre-
sentatives and will be retained on file.

2. **Action Plan**

The Mentor-Protégé team will develop an action
plan outlining the goals and objectives of the
MPP relationship, along with measurable state-
ments of desired outcome. The action plan will
identify the roles and responsibilities of the Men-
tor, the Protégé and SCDOT. Also, review inter-
vals for the MPP relationship and target dates will be established. The action plan will serve as a contract agreement between the Mentor and the Protégé and this document will be legally binding. The action plan must be signed by an authorized representative from each entity prior to the implementation of the Mentor Protégé relationship.

3. Monitoring and Reporting

SCDOT will monitor the progress of the Mentor-Protégé relationship and request information for periodic status reports. The Department may require representatives of the Mentor and/or Protégé to provide verbal and written intermediate reports of the MPP. A final report will be submitted prior to the termination of the MPP relationship and shall be developed with narratives from all parties including input/data regarding major accomplishments/challenges for the program.

Incentives for the Mentor:

The South Carolina Department of Transportation (SCDOT) has established an incentive program for mentors who desire to participate in the MPP program. For construction projects that are identified as Mentor Protégé opportunities, the Mentor will be eligible for compensation as part of the contract by submitting a line item for costs associated with the MPP. However, this amount will not be counted against the bid amount.

For professional services and construction design-build contracts, SCDOT will count an acceptable MPP relationship toward the percentage value of the DBE utilization. This will be considered in conjunction with the other points that will count in the consultant’s final ranking.
